ccj COMMERCIAL CAR JOURNAL

THE MAGAZINE FOR TRUCK AND BUS FLEET OPERATORS

MOST POWERFUL

high-tonnage tractors in their field!

Model for model, new DODGE tractors outpower and outperform all other makes in the popular 38,000 to 48,000-lb. G.C.W. range!

THESE OTHER FEATURES PROVE DODGE TRUCKS OFFER A BETTER DEAL!

Shortest tractors in the 1½- through 3½-ton field —102" from bumper to back of cab! Haul longer trailers, bigger loads!

Easiest handling, thanks to new steering system! 39° turning angle—for sharpest turning of any comparable trucks!

Most comfort with easy-chair seats, easy-to-reach controls, easy-to-read instruments!

Best visibility with 951-sq.-in. windshield—biggest of any leading make!

Quieter exhaust system with over 50% greater muffler capacity, twin exhausts are standard in high-tonnage models!

Here are the facts...

It's *total* power that moves a load . . . the mo horses you have, the more load you can hau And, with Dodge's modern high-tonnage V-8 you get highest total power, 153 h.p. in 2¾-to models; 172 h.p. in 3-, 3½-ton models . . . th most powerful engines of any comparable tractor

You get more power where it counts . . . up t 23% more payload pulling power per 1,000 lb G.C.W. You get more efficient power from exclu sive Dodge hemispherical combustion chamb design. And you get all of this great power a standard equipment on these models! Famou Dodge 6's complete the line . . . many wi stepped-up power and twin carburetion!

SEE YOUR FRIENDLY DODGE DEALER TODA

It all adds up to a better deal for the man at the wheel

DODGE "Job-Rated" TRUCKS

Who needs these delivery savings?

Do your delivery bodies cost too much for rust, corrosion and repainting repairs? Then you need the greater protection and longer paint life of heat-treated Aluminum Alloy Bodies.

Do your thin steel bodies dent easily? Then you need the economy of ⅛th-inch thick Aluminum Alloy in the side panels, the separate skirts, the rub-rails, rear panels and floors of Olson Kurb-Side Aluminum Alloy Bodies.

Do your manhigh delivery bodies weigh a ton or more? Then you need Aluminum Alloy Bodies that save a ½-ton of deadweight and save **more** than a ton of deadweight on some routes by permitting the use of lighter chassis.

Are you fed up with repetitious repairs to brakes, clutches, bearings, springs, king pins, spindles and frequent valve jobs due to the strain of extra body weight? Then you need the maintenance savings of aerotype Aluminum Alloy Bodies that provide rugged strength with light weight and without cumbersome posts, ribs and linings that boost maintenance costs.

Aluminum weighs only ⅓rd as much as steel, so thicker Aluminum Alloy panels return your investment by saving gasoline, tires, maintenance labor and parts replacements.

Olson Kurb-Side Bodies are in demand—New-truck and used-truck dealers can't get enough of them. They resell for twice as much as thin steel bodies because the body determines the life and the value of a used truck.

Hard to get, but worth waiting for — order now for the economy you'll need in the keen competition of this spring and summer.

Ask fleet operators who have used both steel and aluminum bodies. Then feather your own nest by insisting that your Chevrolet, Ford or GMC dealer show you an Olson Kurb-Side.

Write us for Catalogue and Buyer's Guide — "The A, B, C's of Route Truck Selection," plus a sample of ⅛th"-thick heat-treated Aluminum Alloy to compare with the thin metal in your steel bodies that cost too much for maintenance. Then you'll know why Olson Kurb-Sides are in such demand. Act today to save money tomorrow with trucks that pay for themselves through savings!

The OVERLOAD

EDITORIAL COMMENT

Why Look the Roadeo Gift Horse in the Mouth?

EFFECTIVE accident reduction and good public relations are two business assets the truck industry needs and wants most. It can get both from State and National Truck Roadeos. Yet all-too-often the industry looks this gift horse in the mouth and turns thumbs down.

Last year only 18 states participated. Of these, eight conceived and executed their plans in a frantic last-minute rush between June 1 and Sept. 1 —too late to obtain maximum benefits. Another goodly handful had such meager support that future plans are in jeopardy.

It's a situation that needs careful thought and it needs it most at top management level! By and large association managers, safety directors, and drivers are whole-heartedly behind the project. But they know it takes hard work to stage a successful Roadeo and they know they can't do the job alone. The push must come from top-side in the form of full support and a genuine long range program.

What are the stakes and what does it take to do the job right?

First and foremost is accident reduction. If we forget everything else about a Roadeo, let's remember this one fact. *A driver may not even enter without an absolute accident-free record for the preceding 12 months.* There's the number one incentive for all drivers. Number two is the competition among all company drivers to be the one in each class who is selected to represent the company at the state Roadeo.

Can it be denied that a chance to win state and national acclaim is a better driver incentive than a lapel pin or even a cash award? Whether he wins the championship is of relatively minor importance! If he does it's all to the good; but the Roadeo has already done its job for the fleet in building morale and providing the incentive for accident reduction.

Second only to accident reduction is the Roadeo's public relations value. No other activity has focused so much favorable attention on the industry. This has come, in part, in the form of flesh and blood spectators wherever Roadeos have been held. Just plain people, if you please, who have often shown up with a chip on their shoulders and gone away with deep respect for the professionals.

And it has also come in the form of nationwide TV, radio and press publicity, culminating in the Feb. 13 issue of *The Saturday Evening Post.* Let's not overlook the fact that it was the National Roadeo that stemmed the tide of anti-truck shenanigans and made possible the *Post's* excellent article "Tournament of the Trucks." It told millions what only a few had known about the industry. And it didn't cost a penny.

Now very briefly what does it take from the viewpoint of the truck operator to make a Roadeo tick? The formula is simple:

1. Support or even help create your own state Roadeo as your part in an industry-wide move.
2. Enter a contestant now (name to be decided later) in each appropriate class.
3. Set up your own company elimination contest emphasizing the clean competitive angle.
4. Sponsor your winners at the state Roadeos (entry fees usually pay the freight on state champions to the national contest).
5. Back up the whole program with personal support from top management.
6. Don't be afraid of prima donnas (there have only been two or three in all Roadeo history).
7. Plan now for next year's contest and make it a year-long incentive for better driving.

MOST POWER...

WITH TEXACO D-303 MOTOR OIL

you'll get the most power from your engines, use the least fuel. Heavy duty, detergent *Texaco D-303 Motor Oil* (1) keeps rings free in their grooves for proper compression and combustion, (2) prevents harmful deposits from forming on valves and (3) protects bearings against wear and corrosion.

Thus, lubricating with *Texaco D-303 Motor Oil* puts you dollars ahead in savings on maintenance costs, miles ahead in wear-free, trouble-free operation.

To keep chassis maintenance costs low, use *Texaco Marfak.* It won't pound out or squeeze out, protects bearings against wear and rust for extra hundreds of miles. To safeguard wheel bearings, use *Texaco Marfak Heavy Duty*—it requires no seasonal change. *More than 500 million pounds of Texaco Marfak have been sold.*

In transmissions and differentials, use *Texaco Universal Gear Lubricant EP.* It assures smoother performance, longer gear life and lower upkeep costs.

Let a Texaco Lubrication Engineer help you step up fleet efficiency. Just call the nearest of the more than 2,000 Texaco Distributing Plants in the 48 States, or write:

TIMELY NOTES ON MAINTENANCE AND OPERATION

by **MURRAY SIMKINS** Managing Editor

Shop Hints for February

SHOP Hints in February pulled a couple of comments from readers who took issue with certain points. Says R. J. Scholl, of IHC Branch office, Wilmington, in reference to the International Harvester axle puller, page 77: "It can pull axles on the KB-1 and the KB-2 since these models have a semi-floating axle. Model KB-3 has a full floating axle so that this type puller cannot be used." Thank you, Mr. Scholl.

The wrench for tightening compressor pulleys on White trucks, see page 77, February, showed a tool constructed by Joseph Tokasz and as such it will do the job. However, a manufacturer has indicated that this very tool is on the market and available for this work. It is one of the White approved tools, so check up on it if you need one.

Valve Seat Angle

NEWTON, Palmer and Reddy, in a recent SAE paper, make the following recommendations with regard to establishing the valve seat angle in certain engines.

From the standpoint of design, to prevent guttering from deposit formation a 45 deg seat angle will provide approximately 20% greater seating load than a 30 deg angle. However, the seat angle is oftentimes a compromise and to provide for equal valve lift area a 20% greater lift is required with a 45 deg angle than with a 30 deg angle. Where cylinder head distortion is present, a 30 deg face angle is a wise choice because for a given amount of eccentricity the leakage area of a 45 deg face is approximately 40% greater.

The use of an interference angle between valve face and the valve seat is good practice when face deposits are sufficiently troublesome. Interference angles will help to crush the deposits and prevent subsequent wire drawing and valve guttering. This expedient is not necessary in engines where the face deposit problem is minor. The interference angle is definitely not advisable with rotated valves which require full use of the maximum seat width to facilitate good valve face cooling and to prevent valve face grooving and seat wear. It should be pointed out that the most effective valve cooling is the path from the valve face to the cylinder block and any improvements made here have an immediate effect in reducing valve face temperatures.

Unit Fuel Injector Changes

THE Detroit Diesel Engine Division of General Motors has announced several changes contributing to longer life and increased operating efficiency in GM unit fuel injectors used in its line of Series 71 diesel engines. New engines leaving the factory are now equipped with the improved injectors and parts kits are available which make it possible to incorporate the same improvements in injectors now in use.

In the newly designed units the injector valve assembly has been moved from its former location within the spray tip to a higher position to lessen its exposure to high cylinder temperatures. The head of the new injector valve is now square in shape rather than round and maintains the former valve's crowned surface to insure maximum seat sealing.

Increased protection against compression pressure and heat is provided for the valve spring through a relocation of the check valve. This part is now located below rather than above the spring. A new spray tip was designed to accommodate the check valve.

The number of wearing parts in the follower assembly, which transmits motion from the rocker arm to the injector plunger, has been reduced. Also, the follower spring is now heavier and stronger. Smoother and more complete fuel combustion while the engine is operating at part load is attained by a new plunger and bushing assembly. This is shorter and a new "helix" on the plunger varies timing according to rack position.

There is little change in the external appearance of the new injectors but they are easily identified. They are known as "High Valve" injectors and are marked either "HV6," "HV7" or "HV8." These symbols indicate new units of 60, 70 or 80 cubic millimeter capacity, respectively.

Industry Standard for Muffler Noise

ADOPTION of an industry standard for muffler design has been recommended to all truck makers, according to the Automobile Manufacturers Association. The standard, which would apply to both original equipment and subsequent replacement units, would establish a maximum permissible noise level and an agreed method of measuring exhaust noise. The action

Auto-Lite Bull's Eye is guaranteed to burn even when lens is cracked or broken

The popularity of Auto-Lite Bull's Eye is breaking all records because fleet owners want a lamp that won't black out—that is guaranteed to burn even when the lens is cracked or broken. When you replace, insist on Auto-Lite, the distinctive original equipment lamp—the only lamp with the Bull's Eye to concentrate more light in the main driving beam. Remember, the Auto-Lite Bull's Eye is available in 6, 12 and 24-volt sizes to fit every electrical system.

THE ELECTRIC AUTO-LITE COMPANY • TOLEDO 1, OHIO

CCJ At Your Service

Continued from Page 9

originated with the AMA's Motor Truck Committee, acting on the advice of its Truck Noise Subcommittee.

Recommended measuring procedure, using the Beranek-Armour Equivalent Tone Method, was developed by the Armour Research Foundation last year at Illinois Institute of Technology, under terms of a grant from the American Trucking Associations.

A major advantage of the method is its use of commercially available instruments. These include a high-quality magnetic tape recorder and microphone, a set of octave filters, and means for acoustical calibration.

The proposed design standard calls for a maximum noise level of 125 sones, with the sones measured in each of eight bands covering the frequency range from 37 to 9,600 cycles per second, then added to produce the total of 125 or less.

The AMA committee points out that truck manufacturers have made significant advances in muffler design in recent years, but says that adoption now of a standard method of measuring results would help stimulate further progress. It is recognized that other promising methods of noise measurement may, when thoroughly tested, provide an even better standard. Such possibilities will not be overlooked.

Briefly, this evaluation consists of recording the noise on a high-quality magnetic tape recorder as the truck passes by under load. The noise thus recorded is played back through a set of octave bandpass filters. The sound level reading of each band is recorded and plotted on the Armour grid. From this grid, the loudness in sones for each of the filter settings is read off and the individual readings summed up for a single loudness reading for the truck.

Diesel Exhaust Valve Problems

A ROUND-TABLE discussion of "Diesel Exhaust Valve Problems Associated with Fuels and Lubricants" was held at the 1953 SAE Summer Meeting. Excerpts from the Secretary's report follow:

"In general, the higher the ash content of the lubricating oil, the greater is the likelihood of excessive valve deposits and valve burning. However, there was little consistency in the reported experiences. One panel member stated that his company had a record of thousands of hours successful operation with high ash lubricating oils although five deposit-caused valve burning failures had been experienced under laboratory conditions. Another told of an instance wherein light face deposits had actually appeared to improve valve seating. Another said that his experience showed no real correlation between the amount of valve deposits and valve burning. It appeared that the use of high ash lubricating oils did not in itself lead to valve

The New

LEE

Super DeLuxe

CLEAT-RIB

Truck Tire

Gives you the plus of EXTRA TRACTION in a tire built to deliver up to 45% MORE HIGHWAY MILES

This new Lee tire was specially designed to fill a definite need never before satisfied by any truck tire on the market. It's an extra-tread tire with excellent forward and backward traction. It will deliver up to 45% more mileage than a 100 level highway tire. And it can be matched up on duals with any standard highway tire.

In most tires, you have to sacrifice either mileage or traction, but the Lee Super DeLuxe Cleat-Rib scores high on both counts. There are good reasons for this. One is the Lee Cleat-Rib tread, which is nearly half again thicker than on 100 level highway tires. Its deep cut design between cleats and its double radius contour keep it cool running. There is no risk of tread cracking. Center groove gives added protection against side slippage.

Other features that make this tire outstanding are the special-formula rubber for maximum chip and tear resistance; the exclusive Lee Flexlok process that makes separation of the high-tenacity cords practically impossible; the use of Lubri-Cushions between the plies for greater carcass strength and less internal friction; and the sturdy basic construction you find in all Lee tires.

Visit your nearby Lee Truck Tire dealer and see the new Lee Cleat-Rib. Or send the coupon for the illustrated folder telling the full story.

INTERCHANGEABLE. The Lee Cleat-Rib has the same overall diameter as 100 level highway tires. Can be interchanged or paired up with regular tread tires on dual wheel drives. The addition of chains on the regular tires provides supertraction if needed.

Continued from Page 12

burning failures. Other factors, such as severity of operation, engine design and operating period between overhauls seemed to be highly important.

"Possible means of minimizing the effects of valve deposit problems were proposed as follows:

"(a) Improved valve materials. Higher nickel contents appeared to improve valve resistance to guttering and burning. Corrosion of valve materials is not often involved, but when such corrosion does occur, the resulting corrosion products sometimes help to hold deposits. Ordinarily, valve materials do not in themselves affect deposits. When a change in material does affect deposit formation, it is generally a result of changed valve temperature due to different design or heat transmission factors.

"(b) Valve rotators. Users disagreed about their effectiveness. In some instances they appeared to reduce the build-up of seat deposits and in other cases, their value was questionable. One panel member reported Brinelling-damage to rotator components that indicated a probably short effective life.

"(c) Reduced lubricating oil flow to valve stems. No more lubricating oil should be supplied to valve stems than is required for their lubrication. Any excess oil simply becomes available for the formation of deposits.

"(d) Proper selection of lubricating oils. High ash lubricating oils were developed to meet a definite engine need. As such, their use is indicated in certain engines operating under severe conditions. However, they should be used only when they are definitely required by the engine design, operating conditions, or use of a lower-grade fuel oil.

"(e) Valve design. Design factors lowering valve temperature and minimizing the distortion of valves and valve seats are helpful in reducing deposits. Use of valve face and seat interference angles are sometimes helpful in cleaning deposits from valve seats and preventing their excessive build-up."—From a paper presented by Newton, Palmer and Reddy at the SAE National Diesel Engine Meeting.

Lock Ring Installation

ACCORDING to A. J. Brezina, of Thompson Products, Inc., there is considerable field difficulty in the field due to failure to lock rings within the pistons. This is usually due, he thinks, to improper lock ring installation.

Care should be exercised in the installation of lock rings as many cases of lock ring failures are directly due to errors of installation. This applies particularly to lock rings of the two-tang or double-ear type. If the tangs, or ears, in this type of lock ring are compressed

(TURN TO PAGE 18, PLEASE)

GET LONGER BATTERY LIFE, CUT COSTS, SAVE TIME!

THERE's a green line on the Fleet Battery Record Card you see above, that can spell big savings in your fleet operation costs. How? Because it warns you when battery-killing voltage regulator troubles are on the way. And that means you can correct the trouble before it causes serious damage.

Each week, when your maintenance man waters batteries, he makes a quick check with the Goodyear All-Purpose Battery Tester, shown above, and records his findings on the Fleet Battery Record Card — one card for each battery.

When the mark goes in the green-colored "safety-zone," you *know* your electrical system is right. A mark outside this zone warns you that voltage is too high or too low.

A voltage regulator set too high could burn out the battery and shorten the life of every replacement item in the electrical system. A voltage regulator set too low can cause frequent battery discharges, recharges and premature failures from sulphation.

By keeping your batteries "in line" with this Goodyear Fleet Battery Maintenance Plan, you get longer battery life, better electrical system service, and less road delay. And you save even more when you use this plan with Goodyear's Heavy-Duty Truck and Bus or Diesel-type batteries. You'll find the whole story on this plan in a new booklet called the Goodyear Fleet Maintenance Manual. Clip the coupon below and send for it today. It's free, of course.

together, the lock ring takes a permanent set and loses its tension. The correct method of installing double-eared lock rings is to grip *only one* tang, or ear, with needle nose pliers, then insert one end of the lock ring into the groove. The lock ring then should be rolled or pushed into position. This method of installation will prevent permanent setting of the lock rings and avoid the danger of costly failures.

Bus Battery Rental Plan

A BATTERY rental plan for bus operators has been announced by Bus Battery Division, Bowers Battery & Spark Plug Co. The rental service has already been put into operation by a number of fleets. Bowers rents the batteries on a monthly basis with the average number of months' service the operator has been receiving on any makes of batteries determining the monthly rental rate. Important to the operator is that he does not have to replace his present batteries with Bowers batteries in order to get the plan into operation. In addition the operator can get new batteries or increase his fleet at any time without cash outlay for battery purchases. Substantial savings in yearly battery costs are also effected by the plan.

Safety Tip for Welders

CUTTING oily steel plates can be hazardous because flames from the cutting torch often heat the oil deposits to the ignition temperature quickly, causing fires.

One way to avoid such fires, say engineers of the Ansul Chemical Co., is to spread a thin layer of dry chemical over the area to be cut. By doing this, the flames are extinguished before they can get started, and production remains uninterrupted.

Crankshaft Rebuilding Service

TO ROUND out their program of furnishing complete rebuilding service on all engine parts—both gasoline and diesel—Cleveland Hone & Mfg. Co., 8816 Harkness Rd., Cleveland 6, Ohio, announce that they are now equipped to rebuild crankshafts up to 96 in. in length.

New equipment which they have had to install include grinding machinery for large shafts as well as chrome surfacing equipment of the same length. Also new electro heat treating furnace—a most important feature of the hard chrome surfacing process. Much of the machinery used in their rebuilding work is of their own design.

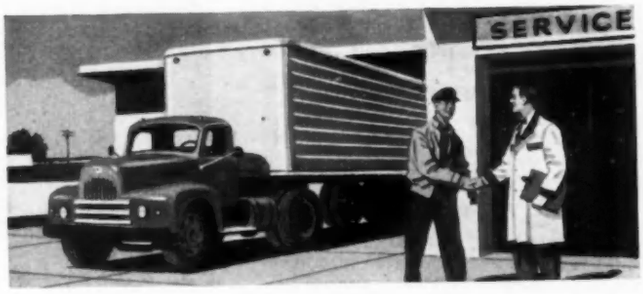
LUBRICATION ENGINEERING SERVICE—

We will analyze your fleet conditions, advise on lubrication schedules and inspection periods. We also provide the services of expert lubrication engineers when necessary, give you progress reports of benefits achieved. Our research laboratories — our 88 years' experience — are all at your service!



SIMPLIFIED P.M. SYSTEM—

Just three things to work with — record folder, work sheet, control blackboard. We supply folders, work sheets — show you how to use them — help you set up entire system. It's simple, foolproof, profitable — helps reduce wear, repairs, breakdowns . . . cut maintenance costs to the bone!

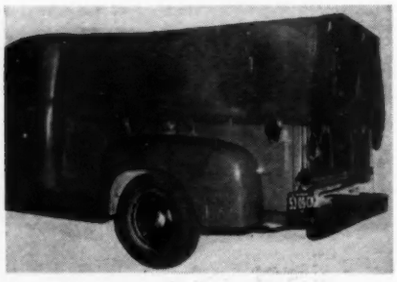
New PRODUCTS

The latest developments in parts, accessories, tools and equipment for the fleet field, described in brief for your convenien

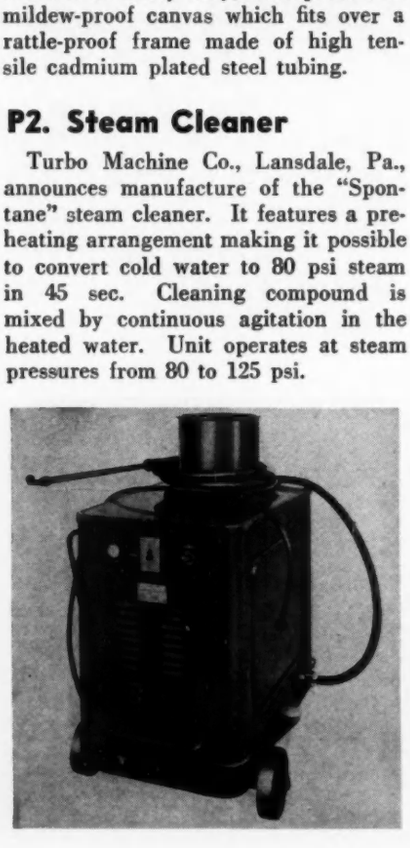


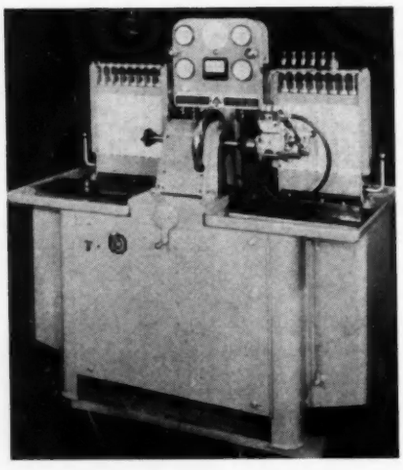
P1. Small Truck Cover

D & M Truck Top Co., Detroit, has placed on the market a covered wagon top for pick-up trucks. The truck top is made of heavy duty, waterproof and mildew-proof canvas which fits over a rattle-proof frame made of high tensile cadmium plated steel tubing.

P2. Steam Cleaner

Turbo Machine Co., Lansdale, Pa., announces manufacture of the "Spontane" steam cleaner. It features a preheating arrangement making it possible to convert cold water to 80 psi steam in 45 sec. Cleaning compound is mixed by continuous agitation in the heated water. Unit operates at steam pressures from 80 to 125 psi.



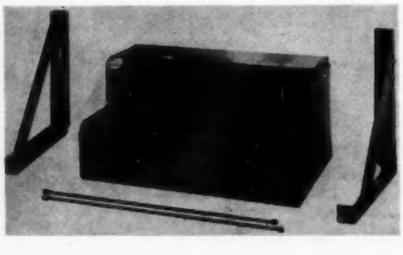


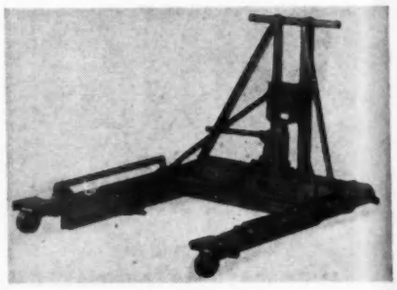
P3. Diesel Pump Stand

Bacharach Industrial Instrument Co., Pittsburgh, Pa., has added to its line a "universal" test stand for calibrating all popular makes of multi-plunger and distributor types of fuel injection pumps, including American Bosch APE and PSB, International Harvester, and Cummins pumps.

P4. Safety Tank

Designed for under-cab mounting, Prior Products, Inc., Dallas, Texas, has announced a new "L-Step" fuel tank. It meets ICC requirements and is UL approved up to 75 gal capacity per tank. No drilling or welding of tank is necessary as mounting brackets are separate.



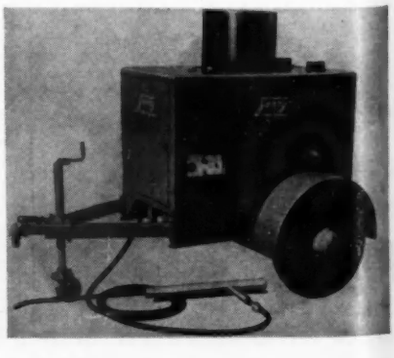


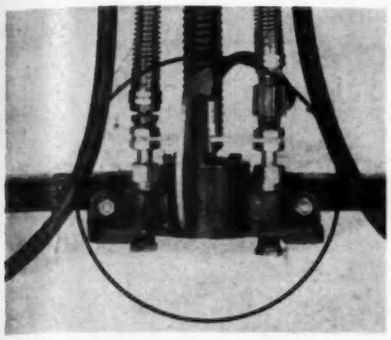
P5. Truck Wheel Dolly

E-Z Lift Mfg. Co., a division of Brummeler Steel Products Corp., Grand Rapids, Mich., announces its new "E-Z Lift" truck dual wheel dolly, enabling one man to easily remove and replace dual wheels. Features include; (1) the "Booster" which shakes or vibrates the duals to loosen obstinate outside bearings and assists in starting the brake drum on the brake shoe when the duals are remounted, (2) the "Tire Evener" which automatically adjusts to different sizes.

P6. Steam Cleaner

New Series "3000" Hypressure Jenny steam cleaners announced by Homestead Valve Mfg. Co., Coraopolis, Pa., feature single heating coil with oil-fired burner and sufficient volume to supply up to four cleaning guns.





P7. Break-Away Valve

A new automatic shut-off valve (circled) for tractor trailer power braking systems is now available from Franklin Industries, Acton, Ind. The new valve, Absco No. 500, operates at any range of air pressure. Operation is completely automatic without action by the driver.

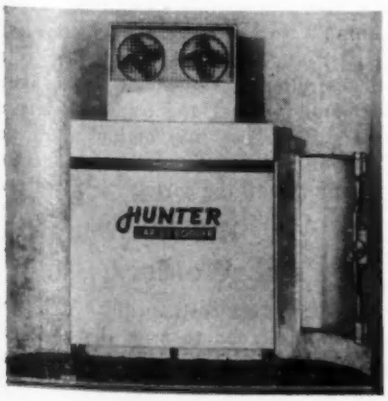
P8. Trailer Connector

Berg Mfg. and Sales Co., Chicago, now has a new, round "Shur-Lock"

trailer connector in 6 and 4-way models. Features include automatic cover closing, and automatic locking.

P9. Cargo Cooler

Four distinct new features and design improvements to increase the refrigerating effectiveness of all three models of the "Hunter" cargo cooler have been announced by Hunter Mfg. Co., Cleveland, Ohio.. Fans, now mounted directly above the dry ice bunker to increase the volume-per-minute flow of cold air, are also more easily accessible for servicing.

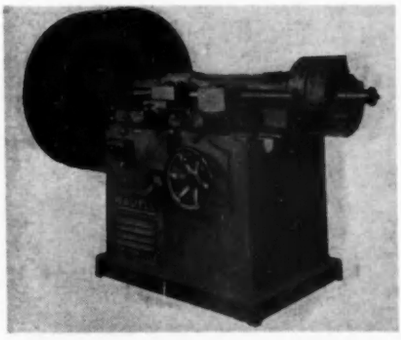


P10. Reefer Insulation

A new low-temperature insulation material, "Isoflex K-20," has been announced by Isoflex Corp., Redwood City, Cal. The new material is a series of corrugated aluminum foil barriers interspaced with resilient spun glass fibre. It is manufactured in panels ranging up to 6 in. in thickness. Aluminum foils are said to minimize heat transfer by radiation, form an effective vapor barrier, and serve as drainage channels for condensed moisture.

P11. Brake Drum Lathe

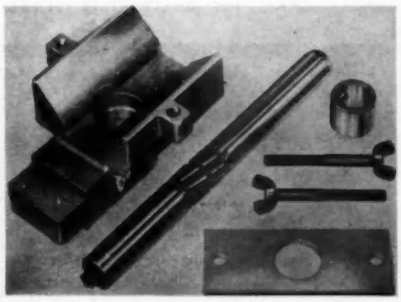
The new Wadell "Transfermatic" double spindle brake drum lathe, with

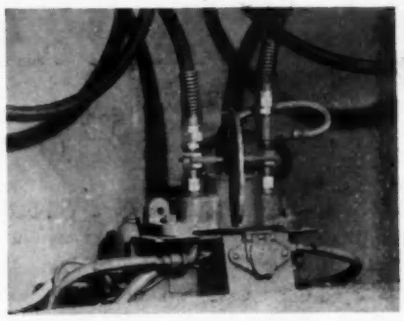


its boring bar on one end and turning bar on the other end, features boring of drums with tires mounted, and simultaneous turning of a matching lining. The Wadell Equipment Co., Garwood, N. J., designed this lathe.

P12. Bushing Reamer

A new series of piston bushing reamer sets for GM diesel engines, designed to remove excess stock from service bushings to factory specifications, is announced by Kent-Moore Organization, Inc., Detroit. A special set has been developed for each of three GM diesel engine applications.



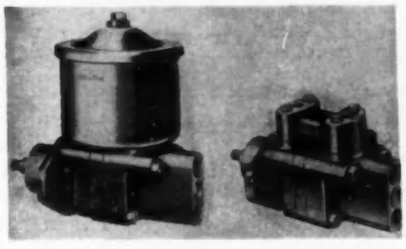


P13. Break-Away Valve

Warehouse Distributing Co., Milwaukee, Wis., announces the release for distribution of its new No. 500 automatic brake safety shut-off valve. The new No. 500 valve complies with ICC regulations. The new valve automatically closes the air off on the tractor each time the trailer hoses are uncoupled or broken. No special mounting or extra fittings are required.

P14. Power Steering Pumps

Vickers Inc., Detroit, has announced production of two new pump series for hydraulic steering systems. Series No. VT16 consists of a vane type hydraulic pump, flow control and overload relief valves and integral oil reservoir. Series No. VT17 comprises identical pump



and valve units without the reservoir and is designed for installations where a separate tank is preferred.

P15. Spark Plug Cleaner

A new cleaning and testing service unit is being marketed by Champion Spark Plug Co., Toledo, Ohio. Known as the Model No. 700 Series Service Unit, it is offered in both floor and

(TURN TO NEXT PAGE, PLEASE)

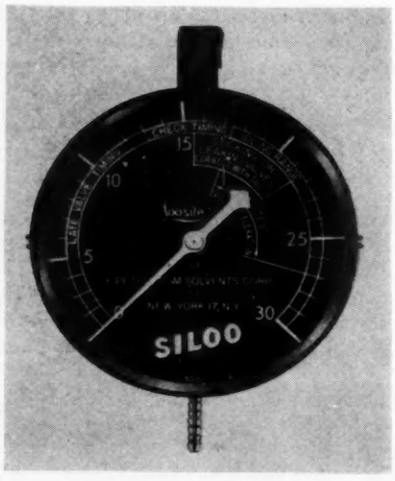
New Product Descriptions

Continued from Page 51

bench models. New features include: a redesigned cabinet with a cut-back in the front panel to provide a handy work shelf, sturdier channel-type tapered legs in floor models, recessed spark viewer, and a larger easier-to-read "Comparator" gage.

P16. Vacuum Gauge

The new "Siloo" vacuum gage is now available for Siloo users in conjunction with the purchase of two cases of



Siloo crankcase additive, Petroleum Solvents Corp., New York City, has just announced. The vacuum gage has a 4½-in. dial, lithographed in six colors for easy legibility. It is a precision instrument, accurately-calibrated to reveal quickly sticking valves, carburetor adjustments, leaking intake manifolds, etc.

P17. Reefer System

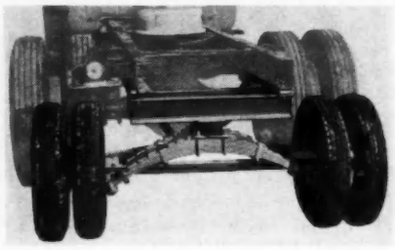
Introduction of a hermetically sealed truck refrigeration system has been announced by Coldmobile Div., Union Asbestos & Rubber Co., Blue Island, Ill. Known as the TR-15, the system consists of two separate sections. The refrigeration unit package is designed to mount through an opening 25½ in. wide by 23¾ in. high in the upper front wall of a trailer with the evaporator section inside and the condenser section outside. Other section is the power unit package designed to mount underneath the trailer. This houses a direct-connected engine-generator unit, batteries, and plug-in cord. A heavy-duty, four-conductor cord makes the electrical connection. Defrosting of the refrigeration system is automatic.

P18. Welding Flux

A new all-purpose welding and brazing flux has just been announced by Andco, Inc., Orchard Park, New York. It is said to provide one flux for all types of gas welding and brazing, well through lead, beryllium, aluminum, bronze, galvanize, copper, rust, grease, paint, tar and dirt. It also is said to braze and weld cast iron, chrome metals, stainless, monel, aluminum, bronze, silver solder and many others. It cleans as it is used during welding and brazing operations. Andco Uni-Flux produces an inert atmosphere around the weld area that keeps oxygen away from such foreign substances as dirt, grease, rust, paint and metal finishes by prohibiting the burning of these substances.

P19. Trailing Axle

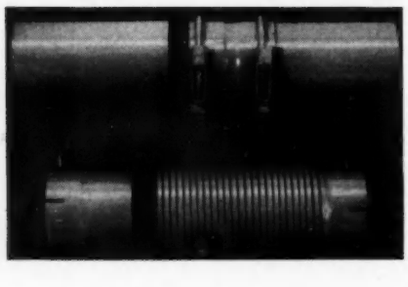
Fox Body Co., Janesville, Wis., announces the marketing of a new trailing axle. Among the features claimed for the axle are: (1) the desirable-trail-

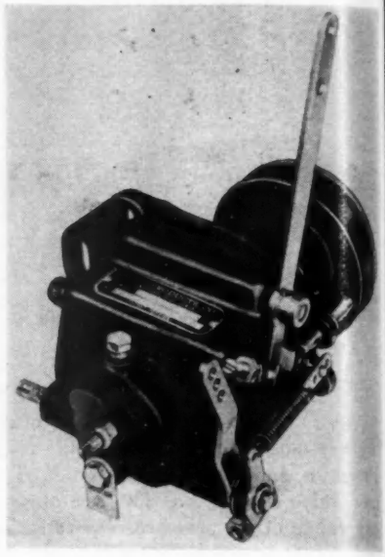


ing characteristics necessary for long tire wear and ease of handling, and (2) its ability to increase truck payloads by as much as 8000 lb. The new axle has a simplified mounting bracket.

P20. Exhaust Coupling

Two new exhaust line couplers, announced by Western Piping and Engineering Co., San Francisco, Cal., make easier installation of exhaust elbows, straight and flexible tubing, and exhaust stacks, for heavy duty trucks.





P21. Pulley-Type Governor

The new, Model No. C-15, universal governor is applicable to practically all engines, according to Hoof Products Co., Chicago, Ill. The extended actuating splined lever shaft makes it possible to shift the lever from one side to the other, or up and down, in a few moments time, for left or right hand mounting and to line up properly with the carburetor lever. The cover may be rotated in any one of three positions, by simply removing the four cover screws, to conform to the best possible position in relation to drive pulley and carburetor. All of these new universal governors are furnished with variable speed levers.

P22. Fuel Pump

A new electric fuel pump for trucks, busses and all gasoline engines has been announced by the Instrument Division, Stewart-Warner Corp., Chicago. It is made in two models—six and twelve volt—and may be used on either negative or positive ground systems. At full capacity, which is in excess of 35 gal per hr without restriction in the line, the pump operates at only 250 strokes per minute. The manufacturer claims that because of the slow operating speed, the "Super Pump" works less, runs cooler, lasts longer and costs less per mile. Rate of operation is dependent upon engine demand for fuel and not upon engine speed. It goes into action when the ignition switch is turned on and keeps pumping until the carburetor float bowl is full of fuel.

P23. Arc Welder

A new, low-cost, utility A.C. arc welder, designed to meet the needs of shops that do not require "production-

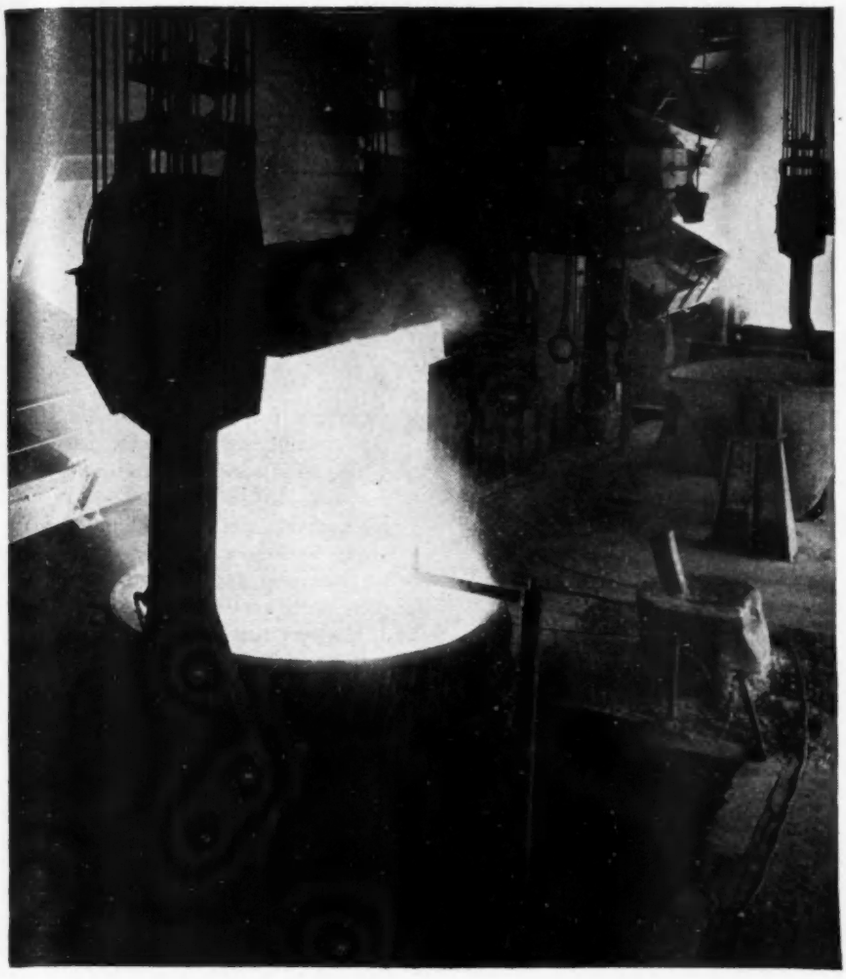
To find steel good enough, we make our own



(Another reason why Timken® bearings are first choice with truck manufacturers)

WE had to go into the steel business to get steel good enough for Timken® bearings. (Something no other bearing manufacturer has done.) The result: Timken bearings are made out of the world's finest bearing steel. And we're the only bearing manufacturer that can control quality at every step in production—from melt shop through final bearing inspection.

Only with Timken bearings do you get all the advantages of 1) advanced design, 2) precision manufacture, 3) rigid quality control, 4) special analysis Timken steels.

That's why truck manufacturers make Timken bearings their first choice. And that's why it'll pay you to specify "Timken" for every replacement bearing. To make your bearing maintenance problems easier, send now for your free copy of "Timken Tapered Roller Bearings — Their Care and Maintenance". Write Dept. JCC-4. L1. Driver Leaflets

Here are an outstanding series of 10 leaflets addressed to drivers containing instruction on how to attain accident-free driving. Each of the 4-page, 4 by 6-in. folders is a different color, and each describes a different factor in safe commercial vehicle driving.

The series, entitled "Avoiding Accidents," starts with "5 Steps for Professional Drivers at Intersections," says "Most accidents happen at intersections" and actually reviews 10 tips to avoid intersectional accidents. No. 2 in the series covers backing, tells how to stay out of trouble in reverse.

Third leaflet covers the dangers of tailgaiting from a safety and courtesy viewpoint. No. 4 lists 10 conditions which make legal speed an unsafe speed, emphasizes driving too fast for existing road conditions.

Passing and center-line crossing accidents are the subject of the fifth folder. No. 6 in the series instructs the driver in vehicle mechanical inspection.

Seventh leaflet is a nine-point review of what to do should the driver be involved in an accident, includes tips on filling out the accident report. The importance of courtesy to safe operation is the subject of No. 8. Nine ways to spread driving courtesy are given.

Night driving hazards and proper physical care for after-dark driving are covered in leaflet No. 9. Last in the series, No. 10, is a quick review of what the driver should do automatically when faced with certain emergency conditions — tire blowout, brake failure, skidding, etc.

Fleet operators can obtain a set of these driver safety leaflets, together with information on quantity prices, without charge by circling L1 on the postcard on page 50.

L2. Welder Manual

This handy 45-page, pocket-size, "how-to-do-it" manual explains how a shop can build its own gasoline engine-driven, portable welding rig. Starting with a basic plan, the publication suggests several variations to suit almost any purpose.

First step in the book is construction of the frame with several possible plans being offered. Various ways of transmitting the power from the gasoline engine to the generator of the welding unit are described in detail.

Sections are also included on installing the radiator, placing the fuel tank and constructing a canopy top. Each step is carefully considered from a viewpoint of producing a welding unit that will be trouble-free in operation.

Suggestions are given on how to control engine speed and on the value of an idling device to save fuel consumption as well as wear and tear. Various types of portable units are shown and suggested, including self-powered units, truck chassis-mounted welders, and trailing units. Most of these can be adapted for stationery mounting.

So you can have a copy handy when the time comes to build a time-saving, gasoline engine-drive welding unit, circle L2 on the postcard on page 50.

L3. Clutch Chart

This full-color, full-size wall chart will give you an easy-to-follow maintenance guide for Timken-Detroit hypoid-helical, two-speed, double-reduction drive units.

It has three sections: (1) a complete cross-section view of the unit, (2) a gear tooth trouble shooting guide, and (3) a series of four charts giving diameter, threads per inch and torque for adjusting the cap screws, stud nuts, pinion shaft nuts and differential bolts.

The cross section diagram of the unit measures 15 by 11 in., shows the unit in complete detail. Around this diagram, in large, easy-to-read type, are maintenance and adjustment instructions with arrows leading to the part of the unit they apply to.

Circle L3 on the postcard on page 50 for your copy of this maintenance wall chart.

L4. Tire Booklet

This booklet is for the files of fleet supervisors interested in cutting truck and bus tire costs. Section-by-section it presents a complete outline of proper tire care so as to obtain greater mileage.

Included is a special section on driving habits desirable to obtain longer tire road life. Care of inner tubes and instructions for tube inflation and mounting are given.

Proper matching and spacing of dual tires is considered, including data on troubles that arise as a result of incorrectly spaced duals. A check list of causes of uneven tire wear tells what to look for to correct the problem.

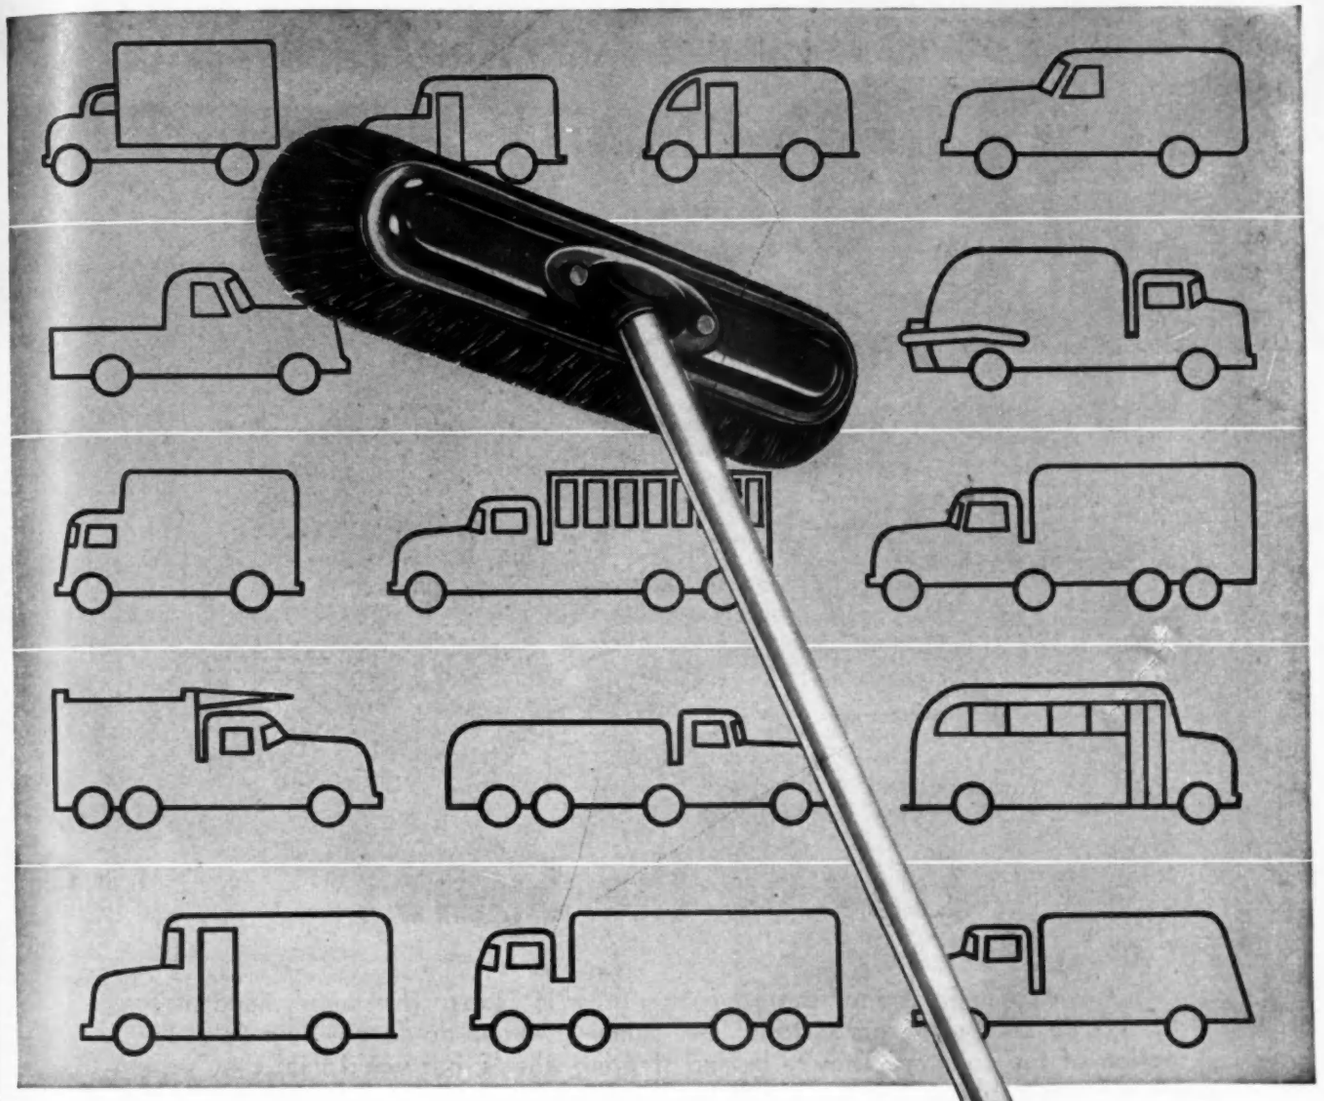
To obtain a copy of this tire-saving booklet, circle L4 on the postcard on page 50.

L5. Painting Data

This 32-page booklet presents in a series of pictures and captions a complete outline on how to make the most of spray painting. While designed as a review and refresher manual for the film "Making the Most of the Spray Painting Method" (see film list, this issue, page 144), it is sufficiently comprehensive to be of value by itself.

To get a copy of this booklet, circle L5 on the postcard on page 50.

For information on additional literature of interest to fleet operators, see page 288



WASH MORE TRUCKS PER HOUR. MORE TRUCKS PER BRUSH

Every part of the Speed Wash is designed for easy handling, top performance and long service. Speed Wash bristles are soft and resilient (50% Nylon, 50% Select Horsehair) to prevent tangling and matting. The tufts are fastened with rust-proof wire; they cannot come out or come loose. The block is water-proof mahogany plywood. The steel back is water-tight and surrounded with a mar-proof rubber bumper. The steel handle is light-weight and zinc-plated inside and out.

These and other features put Speed Wash in a class by itself, the quality fountain brush of the trucking industry. Thousands of fleets prefer Speed Wash. We know you will, too. In fact, we guarantee it.

ORDER ON THIS GUARANTEE

SPEED WASH brushes are guaranteed to be exactly as represented. Your money will be refunded in full including shipping costs, if they do not give complete satisfaction and are returned within 10 days.

Easy on the Spurs!

Some people think that cowboys only grow in Texas. That hain't necessarily so. We've seen some cargo-totin', tire-spinnin', whoop-de-do cowboys in every section of the country. They're behind steering wheels, but you'd think they were driving jack rabbits.

Ever notice what happens to their trucks when they dig the spurs into these rigs to start them? The damage is deplorable, and the replacement cost is exorbitant.

Jack rabbit starts eat tire treads. Even if you don't notice wheel spinning, slippage is there all the same. And rubber under torsion is subject to rapid wear. If your tires look like they had been through a dull buzz saw under low mileage conditions, brother, you're a cowboy.

Jack rabbit starts overwork axles, the differential, the drive line. It's safe to say that 75 per cent of these broken axles are a direct result of some form of driver abuse. If you're driving a heavy truck, you can spring axle housings, damage the ring gear and pinion, break a shaft just by revving her up to high and letting out the clutch.

Even with light loads or with these light delivery type vehicles you can raise more hell in a few ill chosen moments than a drunk at a clam bake. Why is it that some guys insist upon beating up a pick up just because she'll take the gas?

Jach rabbit starts soon wear out a clutch—the lining or the facing or both—because you almost always slip the clutch to get the torque you need for that jet take-off. So don't complain, "My clutch is slipping." Might as well admit, "My jack rabbit starting is showing," when you burn her out.

Cowboys don't save any road time, but they sure, waste high priced equipment. And they're usually left with a truck that's a dog, instead of a jack rabbit. So take it easy with the spurs, Pardner. . . .

AUTOCAR TRUCKS ARE GOOD FOR YEARS AND YEARS

By replacing an inexpensive bushing, this Autocar owner prolongs indefinitely the life of a much more expensive spring bracket assembly.

An average of 128 renewable bushings are used throughout the Autocar chassis.

Their use permits Autocar to confine wear to inexpensive, easily replaced bushings instead of larger, more costly parts.

Bushings permit the use of different materials to meet different conditions. Connecting rods, brackets, levers, etc., employ bushings of soft metal to prevent scoring more expensive mating parts. Where limited motion or shock resistance is a primary consideration, invariably bushings of hardened steels are specified.

No other truck at any price can show as complete an application of bushings as Autocar.

They are one of the hidden values that permit Autocars to deliver top performance year after year and at minimum maintenance cost.

For more information on Autocars fill in and mail this coupon.

Deacon: "Didn't that truck driver and the diner waitress make a pretty bride and groom? But where are they? They disappeared almost as soon as I married them."

Bridesmaid: "Their bus leaves in a few minutes. They're upstairs getting their things together."

Deacon: "What! So soon?"

CCJ

The Safety Director's little son had been a perfect hellion all day. His mother had warned him that she would see to it that papa gave him a large helping of hair brush upon arrival home from work. The boy met his father at the front gate and the talk went something like this:

"Daddy, did grandpa spank you when you were a little boy?"

"He sure did," replied the Safety Director.

"And did great-grandpa spank grandpa when he was a little boy?"

"He certainly did," responded daddy.

"Well, don't you think that with a little co-operation from me we can over-come this inherited sadism?"

CCJ

The President of Fleety-Fleet Express started about his business as usual the morning of his 25th wedding anniversary, and his wife was very much annoyed.

"Don't you realize what day this is?" she asked.

"Sure I do," replied the fleet operator.

"Well, let's celebrate by doing something unusual."

The trucker meditated for a moment, then he suggested quietly, "How about two minutes of silence?"

CCJ

Auto Parts Clerk: "Let's give the bride a shower."

Tool Crib Clerk: "Oh, goody! Count me in—I'll bring the soap."

The Freight Claim Department stenographer was visiting at a wooded retreat. She decided to take a swim in a nearby secluded pool, but neglected to take a towel with her. Following some brisk gymnastics in the water, she was allowing nature's balmy breezes to dry her, when she happened to hear a rustling in some nearby bushes.

"Who's there?" she called out.

"It's only me, Willie," replied a voice.

"How old are you, Willie?" asked the steno.

A wee, small voice replied, "79, dagnabbit."

CCJ

Terminal Manager's Son: "My mama told me I can't play with you because you don't say your prayers before eating."

Freight Solicitor's Son: "Who cares. I don't have to say my prayers before eating. My mother is a good cook!"

CCJ NEWS REPORTS

WASHINGTON RUNAROUND

by KARL RANNELLS Washington Correspondent

Excise Tax Rates . . . Probably No Change

Middle of last month, the House passed its excise tax bill continuing in effect until April 1, 1955, present rates on trucks, trailers, parts and accessories, as well as the 3 per cent tax on transportation of property. At press time, the Senate Finance committee reported the bill out without change in these taxes and it seemed likely the Senate would go along. White House position was still against excise tax cuts and the bill could be vetoed because it contains cuts in other excise taxes.

Knudson . . . Resigns from ICC

Interstate Commerce Commissioner and Defense Transport Administrator James K. Knudson has submitted his resignation in a letter to President Eisenhower. Knudson said the resignation was for personal reasons and that he expected to accept an offer of a position outside the government. He became a member of the ICC on April 20, 1950, after 20 years of service in other branches of the government.

Highways . . . $800 Million Aid Possible

Outlook is for passage sometime this month of legislation to boost federal aid to highways to $800 million annually for two years beginning July 1, 1955. This boost upward is contingent on retaining the 2 cents per gal federal fuel tax. If the gasoline tax reverts to 1½ cents or is lowered, the law would limit highway aid to $600 million.

ICC Fees . . . ATA Will Oppose

American Trucking Assns.' Legal Counsel James F. Pincknev said last month it appeared certain that ATA would file a statement of opposition to the proposed charges the Interstate Commerce Commission would assess carriers for its various services.

Reason Is . . . They Are Too High

Main reason is the thought that they exceed "nominal" amounts—are too high. As *tentatively* announced, fees charged for applications to the ICC would include: (1) $200 plus $50 for each state over one for operating authority, (2) $100 for a transportation broker's license, (3) $150 for exemption for entirely intrastate operation, (4) $150 for temporary operating authority over 30 days, (5) $300 for temporary operating authority pending approval of merger, (6) $175 for transfer of operating authority, (7) $1,000 for consolidation or merger, (8) $1,000 to purchase, lease, contract or acquire stock control of another carrier, (9) $1,000 for non-carrier to acquire stock control of two or more carriers, (10) $50 plus 1/50th of 1 per cent of the principal, par value or stated value with a $1,000 maximum for authority to issue securities or to assume obligation for securities of others, (11) $1,600 for approval of a collective rate making agreement, and (12) $250 for amendment to an approved intercarrier agreement.

Quick Rate Increases . . . May Be Closer

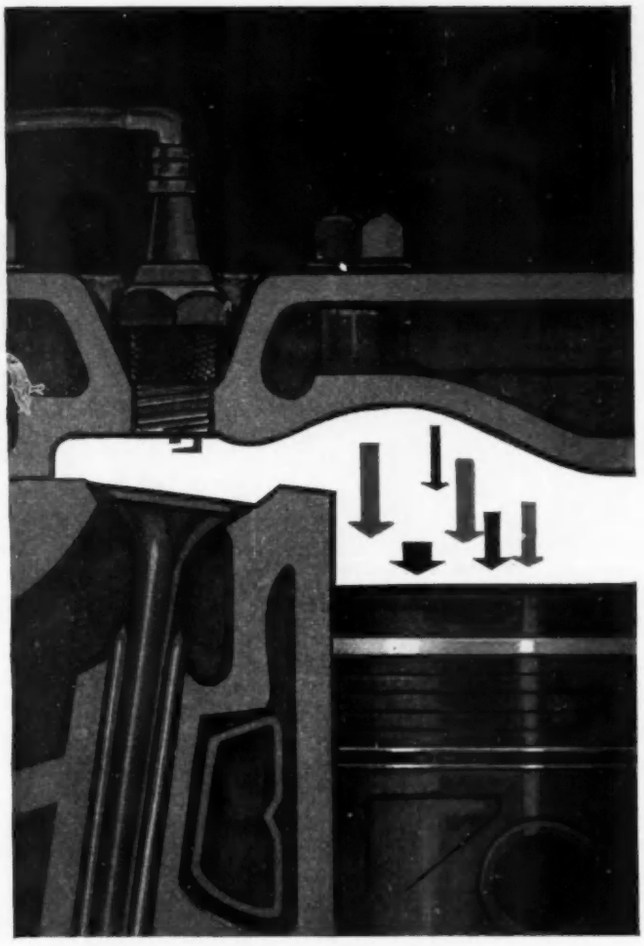
Senate Interstate Commerce Committee amendments to the "Quick Rate Increase" bill (S. 1461) reported favorably by the committee last June reportedly removed objections to the original bill and paved the way for Senate action late last month or early this month. Designed to speed Interstate Commerce Commission action in applications for rate increases, it requires a tentative ICC decision in 60 days but allowing another 60 days for final action. American Trucking Assns. has gone on record as supporting the amended bill.

Section 22 . . . Up for Amendment

New action has been taken on Capitol Hill to bring rates charged the government for transportation services in line. Under a bill (H. R. 8029), sponsored by Rep. Carl Hinshaw, R., Cal., the Interstate Commerce Act would be amended to remove language permitting government agencies to obtain reduced rates (Sec. 22, rates) for transportation of property and personnel. Bill has support of U. S. Chamber of Commerce which says present law permits agencies to play one carrier against another to obtain unfair bargain rates.

Fast Tax Write Off . . . Still Possible

New construction of terminals, repair shops and other facilities will continue to be eligible for fast tax amortization certificates provided construction can be started before the end of this year. Certificates will be harder to get since it is necessary to show that the proposed expansion ties in with defense.



WHERE IS PRESSURE GREATER···

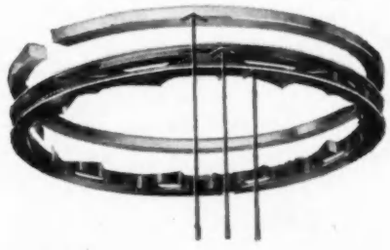
100 fathoms under the sea ...or inside a car's engine?

When combustion occurs, the pressure within the cylinders of an engine goes as high as 600 lbs. per square inch... actually *twice as high* as the pressure at 100 fathoms below the sea!

Old style top piston rings, operating where pressure is greatest, heat is highest and lubrication is poorest, wear *twice* as fast as modern chrome rings. That's why engine manufacturers use *top* rings plated with solid chrome...and 34 out of 36 install Perfect Circles.

In Perfect Circle's 2-in-1 Chrome Piston Ring Set, BOTH the top ring AND the oil ring rails are plated with thick, solid chrome for *complete* wear protection. They assure thousands of extra miles of sustained power and oil economy. Perfect Circle Corporation, Hagerstown, Indiana; The Perfect Circle Co., Ltd., Toronto, Ontario.

PROTECTION WHERE PRESSURE IS GREATEST



SOLID CHROME PLATING on both top and bottom rings give complete wear protection throughout entire area of ring travel. Rings are lapped-in at factory, making tedious break-in unnecessary.

Perfect Circle

2 in 1 Chrome Piston Rings

THE STANDARD OF COMPARISON

CCJ NEWS REPORTS

DETROIT DISPATCH

by LEN WESTRATE Detroit News Editor

Brake Performance . . . New Specs

Representatives of truck and trailer manufacturers and truck operators have proposed a revised table of brake performance for trucks. The recommendations will be presented to a subcommittee of the Uniform Vehicle Code Committee for consideration as replacement for the current 30 ft at 20 mph specification. It includes three categories of vehicles: (1) light vehicles 10,000 lb GVW and under, (2) single vehicles above 10,000 lb, and (3) all other vehicles. Suggested deceleration rate would be 14 ft per sec for all categories, and maximum stopping distances would be 30, 45 and 60 ft respectively. If adopted, the new standards probably would also be accepted by ICC.

Roads . . . Cost Study Coming

Fruehauf Trailer Co. has completed a study of road construction costs. It will be presented to the trucking industry shortly. Directed by Prof. John Worley, University of Michigan, the study is designed to provide the industry with a specific program which can be presented to highway authorities when they attempt to allocate a fair share of road costs to the trucking industry. The study relates basic road costs to the additional expense of constructing highways adequate for truck traffic.

Clutches . . . Multi-Plate Units

There is some indication of a trend toward adoption of smaller-diameter, multiple-plate clutches in larger trucks to replace single-disc units. With engine speeds increasing, peripheral clutch speeds are going up, resulting in some trouble from the linings tearing loose under certain conditions, causing a forced engagement of the clutch with damage to the gear box and clutch housing. Use of two or more plates of smaller diameter brings rim speed down with equivalent or better clutch life.

Truck-Trailer Brakes . . . to Be Tested

The joint AMA-TTMA committee on brake coordination is getting ready to run brake tests on truck-trailer combinations. Purpose is to get up to date information. Data currently available were collected several years ago in connection with the BPR report. The tests also are to determine if brake performance can be improved through modification of the present components and to define brake power requirements which must be supplied by the tractor to the trailer brake system for adequate braking of the entire unit. The tests will be confined to air brakes only.

Muffler Noise . . . and Older Trucks

The new muffler noise standard established for new vehicles will have no bearing on the 9½ to 10 million trucks on the road. The complex instrumentation is costly and requires trained techniques not available to most law enforcement agencies. Also the standards are set up for only the latest trucks. General opinion in the industry is that states should follow provisions in the uniform vehicle code. These require the muffler to be in good working order, in constant operation, and have no excessive or unusual noise or smoke. A muffler approved under the new standards on an older truck may not have the desired results because the whole exhaust system is engineered as a unit.

Drivers . . . Being Researched

The National Automobile Transporters Assn. has started research on the effect physical and mental problems of truck drivers have on their efficiency and safety performance. NATA's accident prevention committee will delve into such factors as (1) induced drowsiness through monotonous driving conditions, (2) effect of speed on prolonged driving performances, (3) relationship between highway conditions and driver behavior, and (4) limits of psychomotor ability of drivers to their equipment.

Pontiac . . . Drops Truck Production

Pontiac Division, General Motors, no longer is in the truck business. The division has dropped from its line the sedan panel delivery model which it has been offering since 1949. Pontiac produced only 1324 of the units last year, decided that the market is too small to justify continuing.

Hydra-Matic . . . for Heavy Trucks

Although GMC Truck has announced its Twin Hydra-Matic drive for heavy duty trucks, it will be June before it will be available to buyers generally.

APRIL ROUNDUP

by ERNIE FOREST Assistant Editor

1953 Tonnage . . . A New Record

Interstate Commerce Commission reports from 1457 Class I Motor Carriers of Property indicate a 9.3 per cent increase in tonnage hauled in 1953 over 1952 according to the year-end report from the Research Dept. of American Trucking Assns. ATA's Truck-loading Index stood at a record high of 270, based on 1941 as 100. In 1952, the previous high mark, the index was 247. A full statistical report on 1953 begins on page 115 of this issue with detailed tonnage data on page 122.

1953 Excise Taxes . . . Yield Up 10 Per Cent

Federal automotive excise taxes collected in 1953 also reached a record high of $2.3 billion, as compared with $2.1 billion in 1952. Included in the total were gasoline—$817.3 million, diesel fuel—$15.7 million, lubricating oil—$72.9 million, automobiles and motorcycles—$905.6 million, trucks, buses and trailers —$187.8 million, tires and tubes—$170.0 million, and parts and accessories—$150.7 million.

WASHO Road Test . . . Near Stopping Point

Report is that regular runs on the WASHO Road Test, near Malad, Idaho, will cease on May 29. After this date, certain special tests to complete the study will be performed, and the job of tabulating the data and compiling the test report will begin. Testing at the sight was resumed Feb. 17, after the scheduled winter lay-off. Damage since then has not been as great as was noted last summer, probably due to a drier-than-normal fall and winter.

Piggy-Back . . . Ban, Expand, Restrict

This past month, trailer-on-flatcar developments included: (1) a petition by Mid-States Freight Lines, Inc., Chicago, to the ICC asking that the RR's be prohibited from using their own trailers in "piggy-back" service for lcl freight; (2) a request for bids from the Erie RR for 100 75-ft flatcars for possible rail-trailer use; and (3) a statement by Rail-Trailer Co. President E. F. Ryan that the service should be restricted to common carriers. He said his company has a contract with the New York Central RR for operation of the service and is presently developing sufficient volume. Also heard was that General Motors Electromotive Division has tentative orders for about 300 rail-trailer cars.

Ton-Mile Taxes . . . 1 In, 2 Out, 1 to Go

Box score for new ton-mile taxes so far this year, not including Georgia's retaliatory round-trip levy, is 1 in, 2 out, 1 to go. Colorado's levy was passed, increases both registration fees and the per-mile rate. (Details are given further on in this section under the heading "New State Laws".)

In Virginia and Kentucky, ton-mile taxes under consideration have been killed. Proposed weight limit increases in these two states died at the same time Kentucky may call a special legislative session later this year for reconsideration of both items.

New Jersey's proposed ton-mile levy had not been introduced into the legislative hopper at press time, but newspaper reports indicate that it definitely will be on the legislative floor again this year.

Trip Leasing . . . Two Hot Spots

Action on trip leasing in two spots is scheduled this month. At press time, the Senate Interstate Commerce Committee had taken no action on HR 3203, a bill which would stop the Interstate Commerce Commission from regulating duration or method of payment for trip leasing. Next scheduled meeting of the committee is April 14.

On the same day, the ICC has scheduled public hearings in Washington on the same two leasing subjects under the proceedings docketed as Ex Parte No. MC-43.

Reciprocity . . . ATA Takes a Stand . . .

Meeting in Chicago last month, ATA's Executive Committee adopted a nine-point statement of policy on truck taxation and reciprocity. It was developed by ATA's Special Reciprocity Committee that met just prior to the Executive Committee. A special sub-committee, composed of members of both committees, has been appointed to supplement the nine points with specific proposals for probable discussions with the governors of the various states at their meeting in Washington the 26-28 of this month.

Bars . . . Third Structure Taxes

Said the ATA statement: (1) Highway user taxes paid by the trucking industry should be limited to registration fees and motor fuel taxes. (2) Such taxes should be equitably distributed among the states. The

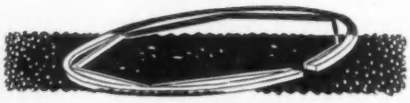
Covering operating tolerances and adjustments as recommended by manufacturers for fitting pist



PISTONS, RINGS, PINS

Piston Ring Size

The correct ring size is determined by the smallest cylinder measurement, which will be found by miking below the ring travel. Consult following table to see if ring gaps must be filed to fit odd cylinder sizes.

Smallest Cylinder Measurement	Correct Ring Size	End Clearance Fitting
std. to .010	standard	None
.011 to .019	.020 oversize	File fit
.020 to .024	.020 oversize	None
.025 to .029	.030 oversize	File fit
.030 to .034	.030 oversize	None
.035 to .039	.040 oversize	File fit
.040 to .049	.040 oversize	None
.050 to .059	.060 oversize	File fi
.060 to .06[illegible]	.060 oversize	None
.070 to .079	.080 oversize	File fit
.080 to .089	.080 oversize	None
.090 to .099	.100 oversize	File fit
.100 to .109	.100 oversize	None

Piston Ring Side Clearance

CAST IRON PISTONS

.002 —.0035	Compression Ring Grooves
.0015—.003	Oil Ring Grooves

(For diameters up to and including 3 15/16. For diameters between 4 in. and 8 in. the side clearance is increased .0005 in. in all cases.)

Torsional twist type compression rings should have an additional .0005 side clearance over the above figures.

Ring grooves worn to excessive side clearance should be reconditioned and groove spacers installed. Check pistons for worn grooves and, if more than .005 side clearance exists, recut grooves to accommodate the next ring width or use the original width ring plus a wide groove spacer. Check for bellmouth ring grooves at the same time that ring side clearance is checked. It is entirely possible for a ring groove to be worn in this manner and, although side clearance may not appear to be excessive, premature failure of the installation could result from installing rings in grooves in this condition.

NOTE: One manufacturer supplies .024 wide groove spacers. If these are to be used, recut grooves only .025 over the original size. Sealed Power supplies the GI-60 contracting groove insert which anchors itself to the top of the ring groove and is locked there by its own outward tension—for combatting top ring groove wear.

Hastings supplies a locking type groove insert .024 wide. This spacer anchors itself to the top of the widened ring groove by its own contracting tension. Special tools to re-cut pistons are supplied which provide a recess in upper corner of ring groove.

Piston Ring End Clearance

Cyl. Diameter, In. Incl.	End Clearance, In.
1 to 1 31/32	0.005 to 0.013
2 to 2 31/32	0.007 to 0.017
3 to 3 31/32	0.010 to 0.020
4 to 4 31/32	0.013 to 0.025
5 to 6 31/32	0.017 to 0.032
7 to 8	0.023 to 0.040

Hastings suggests that from 4 in. up chrome faced compression piston rings should have more end clearance than is specified here. 4 to 4 31/32—.015-.030; 5 to 6 31/32—.019-.040; 7 to 8—.030-.060.

These tolerances are held in the standard cylinder diameters and if there is any cylinder wear, the maximum permissible gap will increase proportionately.

Piston ring end clearance should always be measured at the smallest part of the cylinder bore, usually at the bottom of the cylinder below the ring travel. If ring end clearance is in excess of clearances shown in the chart by .030, a ring .010 larger in diameter should be used.

Cylinder Wear

Type Set	Maximum Taper	Maximum Out of Roundness
Plain	.003	.001
Expander (cast iron)	.006	.002
Expander (steel oil)	.015	.004

Where the cylinder taper does not exceed .003 in., the so-called rering job will generally give satisfactory results with conventional compression and oil rings.

Where the cylinder taper is in excess of .003 in.—and if it does not exceed .015 in. —and it is impractical to recondition the engine, a rering job will generally give satisfactory results with spring type rings.

Any cylinder with over .015 in. taper and .004 in. out of roundness should be rebored even though the rings are designed to operate in much greater tapers. Maximum out-of-roundness permissible is .005 in. If the cylinder has holes or pockets or waves which are more than .001 in. deep, or a ridge at the bottom of the ring travel area, the cylinder should be rebored.

Wilkening recommends the steel oil ring for engines with a maximum taper of .002 and a maximum out-of-roundness of .001.

Cylinder Finish

Recommended cylinder finish in all rebore, rering and resleeve installations is 15 to 30 microinches RMS. with a cross hatch pattern of scratches. In rebore and resleeve installations the use of a 200-250 grit hone stone is recommended. Hone must be allowed to cut-self free with no pressure upon removal. In a rering installation the recommended finish can be obtained by using a deglazer with 3/0 emery cloth or by using a flexible hone with stones no finer than 220 grit.

Remove any abrasives from the porous cast iron surface of the cylinder wall with a stiff bristle brush. Scrub the bore vigorously with a heavy solution of ordinary soap suds and rinse off with clear water.

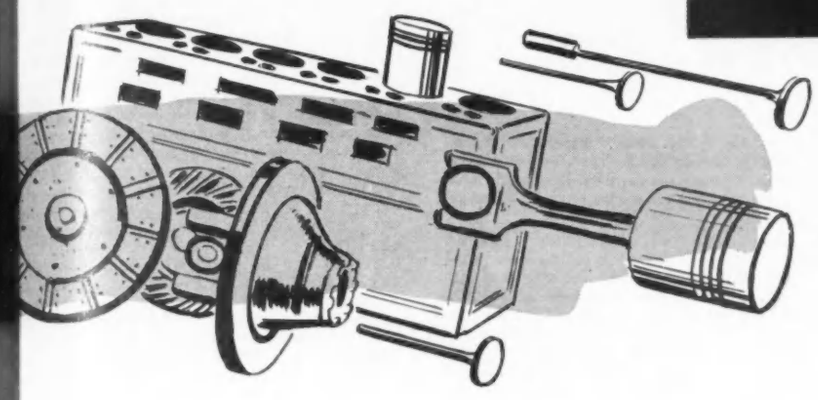
Piston to Cylinder Fit

If the piston skirt diameter is such that the clearance between it and the smallest diameter of the cylinder is 1½ times as much as the clearance recommended by the manufacturer, the pistons should be resized. Pistons should always be resized before piston pin holes are reamed for replacement pins. On pin-fitted pistons the pin holes have been precision bored to exactly the correct size, so they should not be reamed or honed.

Piston Clearance

CAM "A"—Chevrolet Six cast iron pistons must be cam ground with cam "A." Any cast iron piston in the automotive range can be cam ground with cam "A" at the option of the user. Use the following clearances when finishing either round or with cam "A":

The following companies have cooperated with CCJ in supplying up-to-date wear limit data for this section: Aluminum Company of America; Eaton Mfg. Co.; Federal Mogul Corp.; Hastings Mfg. Co.; Koppers Co., Inc.; Lipe Rollway Corp.; McQuay-Norris Mfg. Co.; Monmouth Products Div. Cleveland Graphite Bronze Co.; Moog Industries, Inc.; Ohio Piston Co.; Perfect Circle Co.; Ramsey Corp.; Sealed Power Corp.; Spicer Mfg. Co.; Thermoid Co.; Thompson Products, Inc.; Toledo Steel Products Co.; United Engine & Machine Works; U. S. Asbestos Div. Raybestos-Manhattan, Inc.; Wel-Ever Piston Ring Co.; Wilkening Mfg. Co.

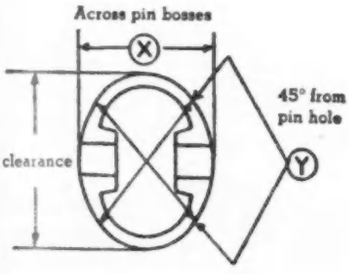


fitting pistons, rings, bearings and valves

Cyl. diam.	3	3¼	3½	3¾	4
All lands	.012	.013	.014	.015	.016
Skirt	.003	.00325	.0035	.004	.0045

Cyl. diam.	4¼	4½	4¾	5
All lands	.017	.018	.019	.021
Skirt	.00475	.00525	.00575	.00625

Note: On new numbers where specific grinding information is not given on this chart, select a piston of similar type and diameter and give the new piston the same clearance.



After cam grinding pistons check the diameters at X and Y as shown above to be sure the pistons have the proper reduction in diameter at these points.

Piston Skirt Clearance

Finish the diameter slightly taper on all pistons with the open end .0005 to .001 in. large. Make certain that the piston is properly positioned into the cylinder bore with respect to combustion chamber requirements.

Piston Pin Clearance

Pin fits naturally depend upon the accuracy and percentage of bearing surface in the pin hole. The more accurately a pin hole is finished, the looser the pin will feel with the same clearance.

When rod bushings are finished on up to date equipment, a slight clearance for an oil film should be allowed. A properly fit pin will almost drop through the rod bushing of its own weight when tried dry, but will have a drag when oiled.

CAM "A"—Ford "A" and "V8" pistons, and all pistons of the all-aluminum type having a split skirt completely open from top to bottom, use cam "B." Use the following clearances when grinding round. Skirt clearance should be cut in half when using cam "B":

Cyl. diam.	3	3¼	3½	3¾	4
All lands	.020	.021	.023	.025	.027
Skirt	.00225	.0025	.00275	.00325	.0035

Cyl. diam.	4¼	4½	4¾	5
All lands	.030	.033	.036	.039
Skirt	.00375	.004	.00425	.0045

CAM "C"—Must be used on all T-slot or U-slot flexible skirt all-aluminum pistons, having a solid section at bottom of skirt, from 2¾ to 3 7/16 in. diameter.

CAM "D"—Must be used on all T-slot or U-slot flexible skirt all-aluminum pistons, having a solid section at bottom of skirt, from 3½ to 4 15/16 in. diameter.

Use the following clearances with both cam "C" and "D":

Cyl. diam.	3¼	3½	3¾	4
All lands	.021	.023	.025	.027
Skirt	.00175	.002	.00225	.0025

Cyl. diam.	4¼	4½	4¾
All lands	.030	.033	.036
Skirt	.00275	.003	.00325

CAM "E"—Must be used on Nelson Autothermic pistons. Same shape as cam "B" but with .013 in. drop at pin which is necessary because of the solid skirt. Also use "E" on all U-slot pistons.

Cam Grinding

Cam	Diameter Reduced at X	Diameter Reduced at Y
A	.004 to .006	.0005 to .0015
B	.005 to .007	.0025 to .0035
C	.008 to .010	.0075 to .0085
D	.011 to .013	.0095 to .0105
E	.012 to .014	.006 to .007

Cam Finishing

This method of piston finishing produces longer piston and ring life and most quiet piston operation. The various piston types require different cams for finishing as illustrated. These cams, together with the piston grinding machine, produce the correct piston contour and correct clearance at the piston pin bosses. Clearance on the piston thrust faces is controlled by the operator.

The data indicates the recommended clearance per inch of piston diameter. This data is supplied for both cam grinding and where the skirt is ground round. In either case the ring grooves are ground round and the clearance per inch of diameter is indicated in the clearance chart. "Lo-Ex" alloy has a lower coefficient of expansion than other aluminum alloys, and consequently, in using these figures for other aluminum pistons, 20 per cent more clearance should be provided.

Because of the bimetallic construction of DUALOY pistons the following special procedure should be used when turning the ring lands: Center the lathe tool in the top groove and feed it in to the depth of cut. (Depth of cut should not exceed .030.) Engage the carriage feed so that the tool will move across the top land cutting first into the ni-resist and then into the aluminum above it. After the tool has passed beyond the piston head reverse the carriage thus causing the tool to pass over the already cut top land to

Wear Limit Charts and Data

Continued from Page 69

the top groove after which it will cut down towards the skirt cutting first into the bottom half of the ni-resist ring and thence across the remaining aluminum lands. It is recommended that the lands be ground to finish size, after turning.

Clearance Chart
(ALLOY AND CAST IRON PISTONS)

1. Skirt clearances are indicated as minimum clearances.

2. Pistons should be measured with pin removed. Heat piston before removing pin and allow sufficient time for piston to return to room temperature.

3. All pistons should be ground to a sharp edge at the open end of the skirt.

4. Pistons to be tin-plated should be ground to regular clearances and then plated with tin .0005 thick on pistons smaller than 4 in. diameter and .001 thick on pistons larger than 4 in. diameter.

5. Pistons should be installed so that the FRONT stamped on the head points to the front of the engine.

6. Break corners of all ring grooves .005 to .010 x 45 deg. with a file when finishing a piston.

7. Chamfer top of skirt 1/32 v 10 deg. when finishing a piston.

SLEEVES

Dry Sleeve Fitting—
Sealed Power Corp.

DRY TYPE WITHOUT FLANGE

Sleeve must have press fit in block of .0005 (½ thousandth) per inch of bore dia.: thus a 3 in. O.D. sleeve will have .0015 press, a 4 in. O.D. sleeve will have .002 press, etc.

Before boring block find actual O.D. of sleeve in this manner: (a) Mike the sleeve O.D. in three places 120 deg. apart at top and bottom. (b) Add all 6 readings together and divide by 6. This will give you the actual O.D. from which to figure boring size in block. It is best to do this after cutting sleeve to proper length. Always cut off the end opposite the inside chamfer.

Locate boring bar centrally by "cats paws" or other means given in instructions with your bar.

Do not attempt boring to size with one cut. Follow instructions given with bar you are operating. In any case the final cut should not exceed .040 on diameter in order to end up with a hole which is straight, round and to predetermined size.

Round off bottom outside corner of sleeve and upper corner of block with a fine file. This is necessary to prevent galling during installation.

If entire block is to be sleeved, do not bore or sleeve each cylinder in succession as strains may be set up which will distort the block. Start with No. 1 and do all odd numbers, then come back to No. 2 and complete even numbers.

Dry Type with Flange

After removing old sleeve, hone out block from .001-.0015 (one to one and one-half - thousandths) larger than actual sleeve O.D. After honing, clean out bore and try sleeve fit. You should be able to insert up to ½ of sleeve by hand push. Clean all scale or dirt from counterbore in block. Turn sleeve upside down and set in counterbore to make sure the flange fits properly.

Round off lower outside corner of sleeve and top of block bore with a fine file. Apply coat of metallic seal to sleeve O.D. Line up any cut-outs on sleeve and push quickly into place. Tap sleeve lightly with rawhide or plastic hammer to make sure it is all the way down.

In event the block is not sleeved originally, bore block. Find the actual size of flange O.D. and counterbore block .005 (five thousandths) larger. The depth must be the same as the width of flange.

After installation—check bore size and finish if required. Wipe off all surplus sealing compound from inside of block.

Finishing

Bore semi-finished sleeves to within .001-.002 (one to two thousandths) of finish size desired.

Rough hone to within .0005-.001 (one-half to one thousandth) of finish size. Use a fast and steady up-and-down movement of hone so as to produce stone marks with a well defined diamond shaped pattern. Expand stones gradually—don't use excessive pressure as you are apt to rupture the granular structure of the surface metal. When stones "squeal" the pressure is too great, the stones are loaded or both. Dress off face of stones with another stone or a very fine file. It also helps to relieve the training edge of the stones similar to the back clearance of a lathe tool.

Change stones and finish hone to final size. If your hone is one designed to be operated dry, follow instructions given by manufacturer.

Roughing stones suggested for wet honing.

(a) Unhardened sleeves & blocks: C150 JV or KV; C180 JV or KV
(b) Hardened sleeves: C100 JV or KV; C120 JV or KV

Finishing stones suggested for wet honing.

(a) Unhardened sleeves & blocks: C320 IV or JV; C400 IV or JV
(b) Hardened sleeves: C180 HV or IV; C220 HV or IV

Letter "C" means silicon carbide, numbers 80, 100, etc., size of grit; letters J, K, etc., the hardness; V means Vitrified bond.

Honing lubricants—lard, lard oil, kerosene and vegetable shortenings are satisfactory; Some oil companies now have a "honing compound" which is made especially for this purpose and should be used where available. After finish honing, check piston in bore with feeler to be sure you have recommended clearance.

Wrap a piece of Wet-or-Dry paper (320-400 grit) around stone, dip in light oil and run up and down the bore 15 to 20 times with hone expanded to touch gently while rotating. This will pick up the greater portions of abrasive particles and metal fragments. Crocus cloth will also be satisfactory. Use stiff bristle brush and scrub bore vigorously with heavy solution of ordinary soap suds. Rinse off with clear water. Apply generous coat of heavy motor oil to bore and wipe out well with soft paper toweling or paper handkerchief.

Dry Sleeve Fitting—
White Machine Works

After cylinder head, oil pan and connecting rod assembly have been removed, the old sleeve may be pulled or pressed out of its receptacle in the block by using a sleeve puller or shop press. Be careful that no scratching or scuffing occurs in the block, that would affect the fitting and roundness of the new sleeve after it is installed. All dirt, rust, and carbon deposit in the receptacle must be removed.

Next comes the important point of accurately measuring the receptacle to determine if it is standard or oversized, and to what extent it is damaged by warpage, distortion, and previous servicing methods. First adjust to proper torque all block studs and cap screws, also all stud nuts except for cylinder head. Check carefully with accurate gage the actual size and condition of the sleeve receptacle. The best job can be done with multiple point gages, because it is physically impossible to accurately measure an out-of-round cylinder with a two point instrument. If the receptacle is as much as .0025 in. (2½ thousandths) oversize or out-of-round, it should be bored to an exact oversize for which sleeves are available and oversized outside diameter sleeves installed with proper "press" or "shrink" fit.

With all dry type sleeves it is imperative for best performance that all possible outside surface of the sleeve contact or bear directly on the block in order to gain proper support and maximum efficiency in dissipation of heat. The amount or measurement of "press" or "shrink" fit varies according to models, from .001 in. (one thousandth) on some extremely thin walled sleeves with 1/16 in. thickness to as much as .005 in. (five thousandths) on heavier types. About .003 in. (three thousandths) is average. "Shrink" fitting is most desirable on thin walled sleeves. Use dry ice, refrigeration, or CO^2 fire extinguisher until sleeve is frosted, and then drop in receptacle with pliers or gloved hand.

"Press" fitting may be done with shop press, air hammer, or block of wood; also by reversing action with sleeve puller. Where sleeve receptacles are .001 in. or .002 in. oversize, and in otherwise good condition, it is advisable to coat the outside of the sleeve with one of the commercial products now available to insure improved sleeve contact with its receptacle. Such "fillers" are not necessary if sleeve and hole size are correct.

MAIN BEARINGS AND CONNECTING RODS

Bearing Tolerances

CRANKSHAFT—A shaft worn to the extent that the bearing surfaces are ridged and scored is unfit for use and must be reground.

JOURNALS: Should not be more than .003 in. (a) out-of-round.

CRANKPINS: Should not be more than .002 in. out-of-round. If main journals or crankpins exceed these tolerances, the shaft is unfit for further use and must be reground.

CRANKCASE—Bearing Saddle Bores Must be round within .002 in. (b) and in true alignment lengthwise for use with precision insert main bearings. Maximum out-of-round journals should not be used with maximum out-of-round case bore.

MAIN BEARINGS — Spread (width across the open ends) should exceed the crankcase bore diameter by .005 in. to .0[illegible] in., depending on the thickness and structural stiffness of the bearing.

CONNECTING RODS — Crankpin bearing bore and the piston pin bushing bore must be parallel with each other within .001 in. in 6 in., and the twist between these bores must not exceed .001 in. in 6 in.

ROD BORE: Must be round within .002 in. (c) Maximum out-of-round rods should not be used with maximum out-of-round crankpins.

ROD BEARINGS: Spread (width across the open ends) should exceed the rod bore diameter by .005 in. (d) to .020 in., depending on the thickness and structural stiffness of the bearings. The Ford earlier V8 floating rod bearings are exceptions to this rule.

CAMSHAFT BEARINGS—After an engine has used up two sets of main and connecting rod bearings, the camshaft bearings are a potential source of trouble due to wear and should be checked for possible replacement.

The above represents salvage limitations. Longer life can be expected if the conditions are better.

Crankshaft End Clearance

FOR THE RODS, it is sufficient to be sure that the fillet at the ends of the crank pin does not bind on the end of the crank pin bearing. A clearance of .004 in. to .010 in. is recommended.

FOR THE CRANKSHAFT, end play or clearance is recommended as follows:

Crankshaft Journal Diameter	Crankshaft End Clearance
2 to 2¾	.004 to .006
2 13/16 to 3½	.006 to .008
3½ plus	.008 to .010

Bearing Oil Clearances

The general rule for the size of the oil clearance, for pressure lubricated bearings, is to allow .001 for each inch of journal diameter, subject to modification depending upon the bearing metal alloy used, i.e.:

Type of Bearing	Shaft Diameters 2" to 2¾"	Shaft Diameters 2 13/16" to 3½"
Lead and Tin Base Babbitts	.0015-.0025	.0025-.0035
Cadmium	.002-.003	.003-.004
Copper Lead	.0025-.0035	.0035-.0045

Maximum allowances given by Cleveland Graphite Bronze are lower, as noted:

(a.) Journals—.002 in.
(b.) Bearing Saddle Bore—.001 in.
(c.) Con Rods Bore—.001 in.
(d.) Rod Bearings—.020 in.

General Recommendations

In selecting replacement bearings, it is advisable that the manufacturer's original equipment specifications be followed as to bearing materials and running clearances. It is absolutely necessary that the crankshaft journal and crankpin sizes be accurately established so that the replacement bearing can be supplied which will have the correct oil clearance. To do this job, micrometers and bore gages should be used whenever possible.

After a crankshaft is reground, the ground surfaces must be lapped and polished to obtain a satisfactory smooth finish, i.e., 20 RMS maximum. A ground finish only is considered top rough and will result in a high rate of both shaft and bearing wear. After grinding and polishing, the crankshaft must be washed and all internal oilways thoroughly cleaned. Fillet radii should be checked to insure non-interference with the ends of the bearings.

The bolt torque specifications, as furnished by the original equipment builders, should be strictly adhered to. Proper torquing of the studs or nuts is a very important and essential factor. The best assembly is obtained if the proper torque is applied with a torque wrench alternating from one side of the bearing cap to the other so that the caps are drawn down evenly.

WEAR LIMITS

In case crankcases are rebored, the following important items should be checked:

1. Bore finish not to exceed 80 RMS.
2. Size, taper, and out-of-roundness.
3. Reboring with proper torque applied to nuts.
4. Bore alignment check with alignment bar.

After it is determined that all parts and clearances are satisfactory, the final assembly may be completed, with the close observation of the following items:

1. Freedom of dirt, nicks, scratches and burrs.
2. Correct positioning of bearing tangs or locking lugs.
3. Correct arrangement of case and rod caps.
4. Bearing oil hole alignment with crankcase oil hole.
5. A clean engine, thoroughly cleaned oilways, crankcase and other parts.
6. Break-in light oil with engine break-in practice ordinarily used for cylinders, pistons and valves.

VALVES

Valve Seat Runout

Both the seat in the block or head, as well as the face of the valve itself should be checked by means of a dial indicator for runout. The valve seat should be concentric with the guide to within .0015 to .0025 total indicator reading.

The valve face should be concentric with the stem to within .0025 to .003. (Actually valve and valve seat runout should be as low as possible, and should not exceed .002.)

It is advisable to periodically check dial pilots as a bent pilot will result in a false reading. Worn or bell-mouthed guides may also cause false readings; replace them if worn beyond limits shown in Valve Stem Wear and Guide Clearance section.

Rotating Valves

There are three types of rotating valves in current use: the positive type rotator, the Ford type rotator, the release type rotator. The positive type and Ford type of rotators do not require adjustment.

The release type, however, requires periodical checking and adjustment since its operation is dependent upon the clearance between the tip cup and valve tip. This clearance must be maintained. If the clearance is greater than the specified high limit, the tip cup should be ground. If clearance is less than specified, the valve tip should be ground. Special gages for checking tip to tip cup clearance are required.

With valve rotation, it is possible to use a wide seat and thus obtain the added cooling effects of a greater seating area. With valve rotation an interference angle between seat and valve face is not required. The interference angle should, however, be used where recommended by the original equipment manufacturer or where failure had resulted due to seat distortion.

The valve face should be concentric with the stem to within .0025 to .003. Bent pilots and worn guides will give false readings. Replace guides not up to these standards.

Valve Seat Widths

Valve seat widths will vary according to design and dimensions of the valve head, type of engine and conditions of operation. The general rule is a wide seat for a hot running engine and a narrow seat for a cool running engine, for longer valve life.

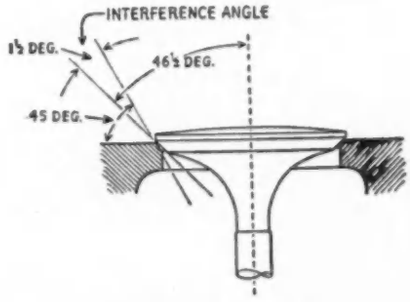
The valve seat width further is governed by the thickness of the valve head margin, or that portion of the valve which extends from the top edge of the valve head to the top edge of the valve face. This sometimes is referred to as the edge thickness and serves a definite purpose of providing a heat dam to protect the valve seat and face from the heat of combustion. A thin margin offers no protection and hastens warpage and burning of the valve face as well as the seat.

This margin usually is approximately 3/64 in. wide on most valves and after refacing should be at least 75 per cent of what it was originally. The thinner the margin, the wider the face.

Valve Seat Angle

Valve seat angle should be within ½ deg. of that specified by the engine manufacturer. This should not be confused with the interference angle between the valve face and the valve seat specified by some engine manufacturers, i.e., valve face 46½ deg., valve seat 45 deg., interference of 1½ deg. Where valve burning has been encountered, the use of interference angle has sometimes alleviated this condition.

Care should be taken when the valve seats are reconditioned to insure that an even seat is ground.



A valve seat which is wide at one point and narrow at another will cause premature burning of the valve due to unevenness of the heat flow and is an indication that the valve seat is not concentric with the valve guide.

Valve Stem Wear and Guide Clearance

Stem Diameter	Clearance Intake	Clearance Exhaust
7/16 in.	.002	.003
11/32 in.	.0025	.0035
5/16 in.	.003	.004
9/32 in.	.0035	.0045
½ in.	.004	.005

If wear develops to a point where the clearance is 50 per cent greater than the specified maximum, replacement of the worn parts is recommended. (Wear readings should be taken at maximum bell mouth or taper.)

(Turn to Next Page, Please)

Wear Limit Charts and Data

Continued from Page 71

Valve stem warpage, up to .003 maximum indicator reading, is permissible. Wear on stem tip up to 1/32 in. is usually permissible. If clearance is .003 or less, a stem .003 will bind.

Valve stem wear should not exceed .001 under the original diameter. That portion of the valve stem below the valve lock groove is not a wearing surface and consequently can be used to measure the original diameter of the stem.

Valve Stem Length

This is not too critical a dimension on most designs inasmuch as the tappet can be adjusted to compensate for valve stems which have been ground and thereby shortened. In the case of the Ford valve where adjustable tappets are not used, length should be held to .020 of the original length.

Valve Tappet To Bore Clearance

This clearance should not exceed engine manufacturers' specifications. Soft spots, excessively worn contact faces, worn, cupped and cracked tappet followers and screws should be replaced. Positive setting of valve tappet clearance is impossible with badly worn tappets.

Valve Stem To Guide Clearance

An old rule to follow is .00035 per .100 valve stem diameter, i.e., a valve stem having a .341 diameter should be fitted with approximately .0012 clearance. This would be the low limit and should not exceed .0022.

Excessive clearance interferes with the heat transfer from the valve stem to the guide and allows varnish and deposits to stem and build up on the valve stem until it is held open and burned.

Exhaust valve guide clearance should be approximately .0005 greater than intake.

Valve Guide Taper

Valve guide tapers fall into the same category as the guide clearance and should not exceed .001 due to taper or uniform wear. Where design specifies a taper for the I.D. of the guide, we would suggest that the above limits of wear be considered as the limiting factor.

The above wear limits and operating tolerances will be satisfactory regardless of the type of alloy used in their composition. Tappet clearance is the only adjustment necessary when an austenitic steel valve is used to replace the original equipment valve of magnetic steel. The coefficient of expansion of the austenitic steel is considerably greater than magnetic steel and additional clearance is necessary. A corrected clearance chart has been issued specifying the correct tappet clearance for Aerotype valves.

Valve Springs

Valve springs are another determining factor in the condition of the valve. Weak springs permit the valves to bounce on the seat and wear and pound in the face.

All valve springs should be tested on a spring tension tester. The compression should be within 10 per cent of the factory limits. If otherwise, replace.

In replacing valve springs, the closed coils should be kept next to the block so that the surge and pounding due to inertia forces can be reduced. This assists in preventing spring breakage.

Also watch for:

1. Wear in block.
2. Wear in spring retainer cam.
3. Wear in spring end.
4. Spring tension.
5. Lowering of spring tension due to lowering of valve seat on reconditioning.

Installations, where the valves have been lowered on the seat due to grind in the installed spring height, should be checked.

Variations in excess of .020 should be taken up with washers to keep spring pressures in the proper range.

When springs are removed, it is good practice to thoroughly clean them and examine the wire surface. Any signs of corrosion would indicate that they should be discarded.

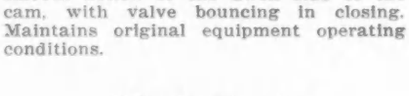
Tappet Clearance

The tappet clearance must not be overlooked. If too much clearance is allowed, the ramp on the cam is not used and the valve train will be subjected to terrific impact forces, causing excessive loads throughout. There will be valve flutter at the cam tip, followed by comparatively smooth action of the dwell side of the cam, with valve bouncing in closing. Maintains original equipment operating conditions.

Valve Seat Inserts

For best performance, the recess for valve seat inserts should be bored smooth square and flat on the bottom.

The sizes should be measured accurately to give the interference fits as shown here.



SERVICE BRAKES

The following working limits for better operation and care of Lockheed, Huck, Bendix and Two-shoe cam operated brakes, are recommended:

Do not cut drum wall on cars, light trucks, heavy trucks and buses more than 20-25 per cent of manufacturer's original thickness. When drums are heavily loaded, caution should be used in cutting down drum thickness due to squeal and distortion problems. Thickness refers to drum body only and does not include flanges or ribs. Drums should be discarded if deflection in diameter is more than .030 in. under full brake application. Diameter should be concentric with hub within .010 in.

SURFACE—Refinish if heat checked or scored more than .010 in. deep.

TAPER—Refinish if barrel shaped or bell-mouthed more than .010 in.

SHIM STOCK or oversize lining should be used to compensate for material removed.

ANCHOR ENDS—Bendix shoes should be repaired or replaced if anchor radius is enlarged or bent.

RIM—Shoes should be repaired or replaced if rim is out of round, out of square or distorted.

WEB—Shoes should be repaired or replaced if rim to web weld is broken as this causes excessive rim flexing resulting in uneven lining wear.

ROLLERS—Discard rollers that are worn, particularly if a flat spot is present on outside. Discard cam follower plates if grooved by the cam more than .015 in.

ANCHOR BUSHINGS should be replaced if worn more than .008 in. Anchors should be fitted and bushings accurately reamed.

PINS: Anchor pin on the Huck brake is non-adjustable type, renew anchor if worn more than .008 in. On the two-shoe cam operated brake and the Lockheed brake, renew anchor pins, or rebush shoes if worn more than .008 in.

ARTICULATING LINKS must be rigid and hold the shoes without side play. Examine buttons and button springs and renew if bent or worn. Applies to Huck brake only.

All weak pull back springs should be replaced.

On the two-shoe cam operated brake, camshaft should be renewed and bracket rebushed if worn more than .025 in.

Repair or replace warped, bent or loose backing plate. Lubricate backing plate ledges.

WHEEL CYLINDERS—Dismantle and examine at each reline or if leaks are present. Renew pistons if scored, sticking or worn more than .005 in. Cylinder walls should be honed if scored. If, after honing enough to remove all scores, the "no-go gauge" will enter, wheel cylinder should be replaced. Renew all rubber cups.

CHECK VALVE—Residual line pressure should be 7 to 12 lbs. per sq. in. Renew check valve if spring is rusty or seats are worn in spring type, or if rubber cup or rubber seat are worn or distorted in metal cage type.

PRIMARY AND SECONDARY CUPS—Replace cups if distorted or edges are rounded.

MAIN SPRING—Replace spring if weak or rusty.

PISTON—Renew if scored or worn more than .005.

Make sure ports and filler cup vents are open.

CYLINDER WALLS should be honed if scored. If, after honing enough to remove all scores, the "no-go gauge" will enter, master cylinder should be replaced.

LINING should be replaced when worn within .010 in. of rivet head on passenger cars and light trucks and within 1/32 in. of bolt head on heavy trucks and buses. In the case of bonded linings, which are rapidly coming into the picture, lining should be replaced when worn to a minimum of .020 in. See suggestion from Raybestos.

Recommended Press Fits

O.D. of Seat Insert	Depth of Insert ¼—⅜ Max.	¼—⅜ Min.	¼—⅜ Desired	Depth of Insert ⅜—½ Max.	⅜—½ Min.	⅜—½ Desired	Depth of Insert ⅝—1¼ Max.	⅝—1¼ Min.	⅝—1¼ Desired

2 in.—3 in.				.005	.003	.004			
3 in.—4 in.							.006	.004	.005

Engine Troubleshooting

Here is a comprehensive guide to common causes of engine failure. Symptoms are used as a basis for diagnosing impending breakdowns

Starting Trouble

1. Starter won't turn engine:

a. If lights stay bright, check for—
- Open circuit at starter
- Stuck solenoid
- Defective starter switch
- Improperly seating brushes
- Broken starter drive

b. If lights dim slightly, check for—
- Jammed starter drive
- Dirty commutator
- Resistance at starter switch

c. If lights go out, check for—
- Discharged battery
- Loose battery cable
- Corroded terminals
- Defective cell
- Tight engine bearings

2. Starter turns; engine won't start:

a. If ammeter is dead, there is an open circuit in the primary. Check
- Points set too wide
- Corroded points
- Defective ignition switch
- Defective distributor drive
- Loose wire at distributor
- Open winding in coil
- Defective ammeter

b. If ammeter shows steady discharge, there is a grounded primary. Check for—
- Defective insulation, primary wires
- Points set too close
- Worn distributor cam lobes
- Worn rubbing block on points
- Grounded contact point arm
- Shorted condenser
- Shorted primary winding in coil

c. If ammeter reading is normal, but spark does not reach plugs, check
- Wet high tension wires
- Defective distributor cap
- Defective rotor brush or contact
- Grounded wire, coil to distributor
- Corroded wells in distributor cap
- Defective coil or condenser

3. Spark is ok, but engine won't start:

a. If there is no fuel at carburetor, check for—
- Empty gas tank
- Clogged fuel line
- Clogged fuel filter
- Restricted vent in gas tank
- Defective fuel pump
- Air leak in line from tank
- Clogged carburetor screen

b. If there is fuel at carburetor, check
- Flooding at carburetor
- Choke not operating
- Water in gasoline
- Restricted carburetor jets

c. If fuel does not reach carburetor, check for—
- Poor engine compression
- Leaking intake manifold
- Loose carburetor flange
- Broken manifold heat control valve
- Restricted low speed circuit
- Valves out of time

d. If there is flooding at carburetor, check for—
- Choke out of adjustment
- Clogged air strainer
- High float level
- Excessive fuel pump pressure

4. Fuel and spark is ok—check for:
- Defective spark plugs
- Spark plug gap set too wide
- Improper spark timing
- Water in cylinders
- Poor fuel

Rough Operation

1. Engine misfires at idle:

a. Trouble may be in ignition. Check
- Plug gaps set too wide
- Defective spark plugs
- Spark plugs of incorrect heat range
- Sticking breaker arm
- Incorrect breaker point gap
- Loose wire in primary circuit
- Defective distributor rotor
- Corroded, pitted breaker points
- Cracked distributor cap
- Leaking or wet high tension wires
- Worn cam lobes on distributor shaft
- Worn distributor shaft bushings
- Defective coil or condenser
- Defective ignition switch
- Spark Timing out of adjustment

b. Trouble may be carburetion. Check
- Dirt or water in fuel
- Incorrect fuel level
- Leaking intake manifold
- Burned heat riser tube

2. Engine misfires at high speeds:

a. Check for conditions under No. 1

b. Check spark for—
- Weak breaker arm spring
- Breaker points set too wide
- Spark plug gap set too wide
- Defective spark advance
- Wrong type spark plugs
- Weak valve springs
- Excessive carbon in head
- Poor compression
- Low pressure point pressure or volume
- Dirty carburetor

3. Engine backfires:

a. Through exhaust, check for—
- Cracked spark plug porcelain
- Crossed spark plug wires
- Air leaks at manifold
- Weak valve springs

b. Through carburetor, check for—
- Poor quality fuel
- Excessive lean or too rich mixture
- Intake manifold air leaks
- Sticking distributor governor
- Improper ignition timing
- Engine preignition
- Incorrect valve timing
- Improperly seating valves.

4. There is preignition:

a. Check for ignition causes—
- Spark set too fast
- Incorrect type spark plugs
- Burned spark plug electrodes
- Faulty distributor advance

b. Check for fuel causes—
- Poor grade of fuel
- Lean carburetor mixture
- Inoperative heat control valve

c. Check for overheated valves from—
- Insufficient valve tappet clearance
- Incorrect valve seat width
- Thin edged valves
- Too strong valve springs
- Incorrect type of valve

d. Check for other causes, such as—
- Excessive engine temperature
- Carbon deposits in combustion chamber
- Sharp edges in combustion chamber
- Cylinder head projection into chamber

Engine Noises

1. Knocking at the crankshaft:
- Insufficient oil supply
- Low oil pressure
- Diluted oil—water or gasoline
- Loose flywheel
- Excessive bearing clearance
- Excessive end play
- Out-of-round bearing journals
- Misaligned crankshaft
- Broken crankshaft web
- Distorted crankcase

(TURN TO NEXT PAGE, PLEASE)

Engine Troubleshooting

(Continued from Page 73)

2. Knocking at the con-rods, check for:
- Insufficient oil supply
- Low oil pressure
- Excessive bearing clearance
- Misaligned con-rod caps
- Misaligned con-rods
- Tapered, out-of-round journals

3. Piston noises, check for:
- Excessive piston to cylinder bore clearance
- Eccentric or tapered cylinders
- Insufficient piston pin clearance
- Piston hitting cylinder ridge
- Carbon in top of cylinder
- Piston hitting cylinder heat gasket
- Excessive clearance at ring groove
- Pin hole out of round with piston
- Ring lands not properly relieved

4. Piston pin noise, check for:
- Excessive piston pin clearance
- Insufficient piston pin clearance
- Loose piston pin lock
- Con rod end rubbing piston pin boss

5. Noise at oil pump or distributor shaft, check for:
- Oil pump loose on mountings
- Damaged or scuffed oil pump gears
- End play in distributor shaft drive
- Worn shaft bushings
- Couplings loose on shaft
- Worn oil pump and distributor driven gear
- Worn or damaged camshaft drive gear
- Improper mesh of drive and driven gears

6. Noise in water pump, check for:
- Lack of lubrication (lubricated types)
- Worn shaft bearings
- Pulley loose on shaft
- Pump impeller loose on shaft
- Excessive end play of pump shaft
- Impeller blades rubbing pump housing
- Impeller broken or pin sheared

7. Noise at the engine fan, check for:
- Belt adjustment too tight or too loose
- Grease or rust on pulleys
- Worn or burned fan belt
- Incorrect type or size fan belt
- Misaligned pulley
- Excessive fan shaft end play
- Fan blades loose on spider of hub
- Fan blades striking radiator
- Unbalanced fan assembly
- Uneven pitch of fan blades
- Bent, distorted fan blades

8. Noise in fuel pump, check for:
- Fuel pump body loose on engine
- Scored lever or cam eccentric
- Interference of lever with crankcase surface
- Worn rocker arm or rocker arm spring
- Weak or worn rocker arm contact spring

Compression Losses

1. Check for compression failures:

a. Engine performance shows up in—
- Loss of power
- Oil pumping—blow-by
- Smoking exhaust
- High oil consumption
- Diluted engine oil
- Poor acceleration

b. Engine sounds indicate—
- Clicking—broken ring or land
- Knocking—piston slap or broken piston
- Hissing at breather—defective intake valve
- Hissing at exhaust—defective exhaust valve
- Regular hiss—blown gasket
- Backfiring through carburetion—valve
- Backfiring on acceleration—valve failure
- Engine miss at all speeds

c. A compression gage shows—
- Low compression reading
- Low reading—two cylinders
- Leak past valves—compressed air test

d. A vacuum gage shows—
- Low vacuum gage reading
- Fluttering of needle
- Irregular drop in vacuum

2. Check piston ring conditions:

a. If rings are broken, cause may be—
- Wrong type, size ring
- Ring striking top ridge
- Worn ring grooves
- Broken ring lands
- Insufficient ring tension
- Insufficient gap clearance
- Excessive side clearance in ring groove
- Undersize pistons
- Scored, wavy cylinder walls
- Overheating

b. If there is ring sticking, check
- Compression blow-by
- Incomplete combustion
- Engine detonation
- Inadequate crankcase ventilation
- Improper engine cooling
- Insufficient ring land side clearance
- Dirty, contaminated oil
- incorrect type of oil
- Poor grade of oil or fuel
- Lugging engine
- Excessive engine idle

c. If rings are noisy, check for—
- Broken piston ring
- Worn ring grooves
- Broken ring lands
- Lack of inner ring tension
- Top ring striking cylinder ridge
- Undersize pistons
- Wavy cylinder walls

3. Check for piston failures:

a. If there are piston noises, check
- Carbon accumulations in head
- Broken piston, skirt, ring land
- Insufficient clearance at top ring land
- Collapsed piston skirt
- Eccentric or tapered cylinders
- Excessive piston to bore clearance

b. If there is piston breakage, check
- Inadequate lubrication
- Overspeeding and overloading
- Pre-ignition
- Engine overheating
- Misaligned connecting rods
- Undersize pistons
- Eccentric or tapered cylinders
- Warped cylinder barrels

4. Check for cylinder failures:

a. If there is excessive wear, scoring, check for—
- Inadequate lubrication
- Contaminated or poor oil
- Incomplete combustion
- Too harsh type rings
- Improper cylinder finish
- Sharp edge left on piston skirt
- Insufficient ring gap clearance
- Tight piston pins
- Misaligned connecting rods, pins
- Distorted block, crankshaft
- Cylinders bored out of line

b. If there is cylinder warpage, check
- Engine overheating
- Improper head tightening
- Steam pockets in block
- Deposits between dry sleeve and bore
- Improper sleeve installation

5. Check on valve seating for:
- Insufficient valve-tappet clearance
- Broken, weak valve springs
- Improper valve timing
- Deposits under head and stem
- Warped heads and stems
- Cracked valves and seats
- Burned valves and seats
- Warped or binding guides
- Improper grinding operations
- Worn timing gears or chain

Electrical Failures

1. With battery as guide:

a. If frequent charge is necessary, check for—
- Low regulator setting
- Slipping generator drive
- Corroded battery terminals
- Worn out, inefficient battery
- Short circuit in charging circuit
- Stuck cut-out in regulator
- Excessive use of electrical units
- Excessive drag in engine

b. If there is high water loss, check
- Too high charging rate
- Old, inefficient battery
- Leaking battery cell
- Cracked battery case
- Defective current regulation

c. If battery will not take full charge, check for—
- Low water level
- Worn out battery
- Spilled electrolyte
- Internal short circuit
- Impure electrolyte (doped up)

2. With starter as guide:

a. If there is excessive current draw, check for—
- Broken, jammed starter drive
- Dirty, gummed armature
- Shorted armature
- Grounded armature or field
- Resistance in engine parts
- Use of too heavy oil in winter
- Misaligned starting motor
- Worn armature shaft bearings
- Misaligned armature shaft
- Loose field pole pieces

b. If starter fails to operate, check for—
- Poor battery ground
- Jammed drive
- Broken teeth on flywheel
- Direct ground in switch
- Burned contact points in switch
- Improper seating brushes
- High mica between commutator segments
- Shorted armature
- Shorted field or brushes

c. If there is excessive noise at starter, check for—
- Defective starter drive
- Chipped flywheel teeth
- Insufficient lubrication
- Worn armature shaft bearings
- Misaligned starting motor
- Loose starter mounting
- Sprung armature shaft

d. If there are burned commutator bars, check for—
- Excessive arcing at brushes
- Excessive battery voltage
- Improperly seating brushes
- Open circuited armature coils
- Open field circuit

3. With lights as guide:

a. If there is excessive voltage drop, check for—
- Corroded, rusty grounds
- Loose connections
- Cracked, leaking wire insulation
- Frayed, broken cable strands
- Insufficient capacity wiring

b. If lamp fail to light, check for—
- Blown fuse
- Burned out bulbs
- Loose connections
- Open circuit in wiring
- Run down battery
- Defense light switch

c. If lights flicker, check for—
- Loose connections
- Poor grounds at lamps

d. If bulbs burn out, check for—
- Excessive battery voltage
- Corroded, defective grounds
- Excessive charging rate
- Short in wiring
- Incorrect type of bulbs
- Poor grade of bulbs

4. With generator as guide:

a. If generator fails to charge, check
- Open charging circuit
- Cut-out points stuck open
- Sticking brushes
- Dirty, gummy commutator
- Burned out commutator
- Grounded wire in charging circuit
- Grounded field coil
- Short circuit in field
- Open coil in cut-out windings

b. If there is a low, unsteady charging rate, check for—
- Conditions listed in (a.)
- Slipping fan belt
- Loose generator pulley
- Improperly seating brushes
- Worn brushes, weak spring tension
- Incorrect type of brushes
- Out of round commutator
- Resistance in charging circuit
- High mica between commutator bars
- Grounded generator field
- Open armature winding
- Loose pole pieces in field circuit
- Defective ammeter

c. If there is an excessive charging rate, check for—
- Improperly set regulator
- Defective regulator
- Overheated battery
- Improper third brush setting
- Shorted field—internal grounded type
- Grounded field—external ground type

d. If generator is noisy, check for—
- Misaligned fan belt or pulley
- Improperly seated brushes
- Worn or damaged bearings
- Insufficient bearing lubrication
- Loose generator drive pulley
- Loose field pole pieces
- High armature slot wedges
- Excessive output

e. If there is arcing and noise at brushes, check for—
- High mica between commutator bars
- High commutator bars
- Out-of-round commutator
- Sprung armature shaft
- Dirty, glazed commutator
- Hard spots in brushes
- Weak brush spring tension
- Brushes worn down or loose
- Loose wiring at pigtails
- Shunts loose in brushes
- Excessive output

f. If armature fails prematurely, check for—
- Excessive charging rate
- Failure of voltage regulator
- Improper type brushes
- Worn shaft bearings

5. With regulator as guide:

a. If there is excessive oxidation of points, check for—
- Reversed polarity
- Poor ground connections
- Misaligned contact points
- Improper air-gap setting
- Shorted field in generator
- Wrong type of replacement points
- Open shunt resistors

b. If there is excessive point pitting, check for—
- Long usage with normal wear
- High current output of generator
- Insufficient point spring tension
- Reverse polarity in generator—
- Pitting cut-out points
- Suppression condenser on "F" terminal
- Items under TA

c. If there are burned coil windings check for—
- Excessive current output
- Stuck cut-out points
- Short in charging circuit
- Resistance in ground circuit

d. If there are sticking contact points, check for—
- Misaligned points
- Poor ground connection between generator and regulator
- Shorted field coil in generator
- Pitted or oxidized points
- Defective winding in regulator
- Open resistance unit

6. With ignition system as guide:

a. If there is breaker point oxidation, check for—
- High battery voltage
- Oil and crankcase vapors
- Filings lodged on points
- High resistance in condenser circuit
- Incorrect type ignition coil

b. If there is ignition coil failure, check for—
- Extremely high voltage
- Moisture formation
- Excessive heat from engine

c. If there are condenser failures, check for—
- Normal fatigue
- Excessive heat
- Moisture

d. If spark plugs burn and foul, check for—
- Incorrect type plug
- Too rich fuel mixture
- Engine pumping oil
- Inferior grade of gasoline
- Overheated engine

High Oil Consumption

1. Check for external leakage at:
- Outside oil lines

(TURN TO NEXT PAGE, PLEASE)

Engine Troubleshooting

(Continued from Page 75)

Front main bearing
Rear main bearing
Oil pan gaskets
Crankcase ventilator pipe
Fuel pump gaskets
Valve cover gaskets
Timing gear cover gasket
Crankcase drain plug
Oil filter gaskets
Oil filter connections

2. Check for defective rings due to:

Worn or broken rings
Insufficient tension in rings
Insufficient clearance of ring gap
Ring fitted too tight in grooves
Carbon in oil ring slots
Insufficient ventilation of oil rings
Rings out of round, warped, twisted
Wrong size rings

3. Check for defective cylinder surface showing up in:

Worn, wavy, distorted cylinders
Rough finish in cylinders
Scored cylinder walls

4. Check for defective pistons due to:

Normal wear
Out of round pistons
Collapsed piston skirt
Insufficient drain holes in oil ring grooves
Worn ring grooves
Improperly fitted pistons
Misalignment of piston and rod assemblies

5. Check for defective bearings due to:

Scored con-rod bearings
Worn main bearings
Leaking main bearing seals
Worn camshaft bearings
Spurt holes in worn rods
Plugged oil seal drain
Out-of-round crankshaft
Misaligned bearing caps
Misaligned crankshaft

6. Check for defective valves due to:

Valve timing too late
Incorrect tappet clearance
Leaky or burnt valves
Plugged valve chamber drain
Worn valve seats
Worn valve stems or guides

7. Check condition of oil:

Oil level too high
Thin, diluted oil
Oil pressure too high
Broken oil lines
Poor grade oil

8. Check for other contributing factors:

Clogged breather
Clogged oil filter
Clogged muffler, tail pipe
Leaky intake manifold gaskets
Defective spark plugs
Faulty carburetion
Overheated engine
Defective booster pump diaphragm
Worn timing gears or chain
Sustained high speeds
Improper break-in of newly rerung engine

High Gas Consumption

1. When trouble is in carburetor — check for:

a. Flooding or leaking caused from—
Cracked carburetor casting
Leaking line connections
Defective carburetor bowl gasket
High float level
Plugged vent hole in cover
Loose float needle seat
Defective needle valve seat gasket
Worn needle valve and seat
Foreign matter clogging needle valve
Ridge worn in lip of float
Worm float pin or bracket
Float binding in bracket
High fuel pump pressure

b. An overrich mixture caused from—
Restricted air cleaner
Too much oil in air cleaner
Choke level stuck
Choker valve spring stuck
Leaking float
High float level
Warped or bent bowl cover
Worn metering rod
Worn high speed circuit jets
High fuel pump pressure

c. Too rich choke caused from—
Plugged air strainer
Binding butterfly valve
Choker shaft binding
Stuck or binding choke piston
Leak in choke gasket
Improper adjustment of accelerating pump

2. When trouble is in fuel pump, check for:

Leakage around diaphragm cover
Leaking fuel pump diaphragm
Leaking sediment bowl gasket
Loose valve seats
Warped check valves
Dirt, sediment in valves
Corroded valve seats
High fuel pump pressure

3. When there is fuel loss check for:

Leakage at lines and connections
Leaking gas tank
Evaporation from partially filled tank
Evaporation from overheated lines
Leakage at filler cap

4. When trouble is caused by ignition conditions, check for:

Incorrect spark timing
Leaking high tension wires
Incorrect spark plug gap
Fouled spark plugs
Worn breaker points
Faulty spark advance
Defective condenser
Weak ignition coil
Pre-ignition

5. When trouble is caused by poor compression check for:

Leaking head gasket
Worn or broken piston rings
Worn pistons and cylinders
Worn valve stems or guides
Sticking valves
Poorly seating valves
Weak valve springs
Distorted head or block

6. Check for other vehicle factors such as:

Loose carburetor flange on manifold
Improperly adjusted or worn throttle linkage
Restricted exhaust system
Carbon in manifold
Improperly adjusted manifold heat control
Leaking windshield wiper hose
Leaking intake manifold gasket
Leaking manifold intake heat riser
Overheating engine
Unsatisfactory engine warm-up
Use of poor grade of gasoline

7. When chassis conditions are to blame, check for:

Dragging brakes
Slipping clutch
Under-inflated tires
Excessive engine friction

8. When driving conditions are to blame, check for:

High speeds
Rapid acceleration
Excessive use of low gears
Excessive idling
Improper engine warm up
Use of too heavy lubricants

Valve Failures

1. When valves break, check for:

Excessive tappet clearance
Cocked springs or retainers
Weak valve springs
Too much spring pressure
Excessive temperatures
Excessive engine speeds
Out of round seats
Worn valve guides
Worn retainers
Worn retainer grooves
Block distortion
Defective valve forgings

2. When valves burn, check for:

Close tappet clearance
Lean air-fuel mixture
Improper block cooling

Improper spark plug heat range
Pre-ignition
Improper spark timing
Weak valve springs
Gum formations on stem
Deposits on valve seats
Excessive detonation
Exhaust back-pressure
Improper valve-guide clearance
Warped valves or guides
Incorrect valve seat width
Inferior fuel
Eccentric valve face
Defective valve material

3. When there are valve deposits check for:

Inferior fuel
Inferior oil
Improper cooling
Rich carburetor setting
Dirty oil filters
Dirty air filters
Excessive oil pressure
Poor lubrication of stem
Worn valve stem
Bell-mouthed valve guides
Too much engine idling
Worn rings, cylinders, pistons

4. When valve springs break, check for:

Normal fatigue
Valve flutter at high speed
Corrosion of valve springs
Improper crankcase ventilation
Worn camshaft bearings
Worn crankshaft or bearings
Worn timing gears or chains
Worn lobes on camshaft

5. When valves are noisy, check for:

Excessive tappet clearance
Inadequate lubrication of rocker arms
Wear in tappets, adjusting screw
Wear in cam lobes
Wear in push rods
Wear in rocker arm assembly
Wear in valve guides

6. When precision adjustments are impossible, check for:

Wear in valve stem tip
Wear in adjusting tappet screw
Wear in push rod ends
Loose rocker arm assemblies
Worn rocker arms
Wear in tappet body
Wear in spring retainer slot
Wear in spring retainer cup

Bearing Failures

1. Check for premature wear:

Caused by dirt from—
Careless service methods
Contaminated oil
Infrequent oil changes
Dirty oil filters
Dusty operation

2. Caused by improper fitting due to:

Distorted con-rods
Mixing con-rod caps
Installing shells backwards
Filing shell to fit
Chiseling shell to reduce clearance
Dirt between brg. and rod bore
Out-of-round journals
Tapered journals
Warped crankshaft or block
Excessive crankshaft end play
Scored bearing surface
Improper clearance
Use of inaccurate tools
Improper tensions of studs

3. Caused by corrosion from:

Crankcase acid vapors
Infrequent oil changes
Poor crankcase ventilation
Incomplete combustion
Engine blow-by
Inferior type of oil
Overcooling
Overheating

4. Caused by improper vehicle operation such as:

Overspeeding
Overloading
Lugging on hills
Spark detonation
Improper engine break-in
Racing a cold engine
Use of wrong type, grade oil
Use of improper fuel
Improper spark timing

5. Caused by lubrication failures resulting from:

Defective oil pump
Clogged oil pump screen
Excessive engine sludge
Excessive engine temperature
Use of too heavy oil in winter
Insufficient engine warm up
Insufficient quantity of oil
Crankcase dilution
Inadequate crankcase ventilation

Cooling System Troubles

1. When there is external leakage, check for:

Loose, defective hose clamps
Defective rubber hose
Broken radiator seams
Corrosion perforation of water tubes
Loose core hole plugs
Worn water pump shaft, seal, bearing
Damaged gaskets, pump, cylinder
Warped cylinder head or block
Cracked cylinder head or block

2. When there is internal leakage, check for:

Loose cylinder head bolts
Damaged cylinder head gasket
Warped cylinder head or block
Cracked cylinder wall
Porosity of cylinder head (aluminum)
Deteriorated wet cylinder sleeve seals
Broken joints in oil coolers

3. When there is loss from overflow, check for:

Defective pressure valve in cap
Leakage of overflow tank
Defective radiator baffle plate
Air leak on suction side of pump
Air entrainment from top tank turbulence
Restricted passages in radiator
Steam formation at hot spots
Foaming of cooling liquid
Exhaust gas leakage into system

4. When there is restricted circulation, check for:

Slipping fan belt
Low or too high coolant level
Clogged radiator core
Collapsed radiator hose
Stuck thermostat
Pump impeller loose on shaft
Pump blades broken or worn
Clogged water jacket passages
Distribution tube dislocated
Air leak in suction side of system
Inadequate cooling system capacity

5. When engine overheats, check for:

a. Cooling system factors caused by:
Causes listed in No. 4
Clogged bug screen
Coated radiator core fins
Radiator air baffles out of place
Bent fan blades
Oil and sludge in system

b. Spark conditions caused by:
Incorrect ignition timing
Improper fuel mixture
Low oil level
Defective spark advance mechanism
Incorrect valve timing
Pre-ignition
Clogged exhaust or muffler
Defective heat control valve
Tight engine, bearings, pistons, rods

c. Operating factors caused by:
Dragging brakes
Overloading of vehicle
Lugging engine on grades
Excessive engine idling
High sustained speeds
Driving in sand, snow, mud
Stop and go driving

6. When there is overcooling, check for:

Defective thermostat
Thermostat installed incorrectly
Automatic shutters not functioning
Defective heat control valve
Inaccurate temperature indicator
Excessive engine idling

7. When there is corrosion present, check for:

Impurities in water
Lack of rust inhibitor
Improper draining and service
Air leaks in system
Electrolytic action
High temperature

See Special Diesel Engine Troubleshooting Data on Page 228

Spark Plug Heat Range Chart

Proper spark plug heat range is important to engine operating efficiency. Too hot plugs may become coated with oxide to the point where performance is affected. Points wear rapidly, and early failure results. Too cold type plugs carbon up and become deposited with soot. Result is premature fouling and engine missing. The following charts show manufacturers' heat range numbers. However, only comparative heat range relationship is provided. Spark plugs of different manufacturers vary as to grouped ranges so that direct comparison is not always possible.

The heat range of a spark plug is mainly determined by the length of the insulators. Longer insulators run hotter since the heat must travel farther to reach the coolant. Shorter insulators run cooler because the heat travels a shorter distance as shown in the schematic drawings below. Heat range is identified by the number on the porcelain top.

a—Vehicles over 35 ft. length must have 3 axles except buses in Fla. and S. C.
b—Plus weight on front axle of motor vehicle.
c—With power brakes.
d—104 inches for urban buses.
e—Director of Highways may allow 3-axle buses 40 ft. on designated highways.
h—Applies to vehicles registered after March 1, 1950. Vehicles registered or contracted for purchase by residents on or before March 1, 1950, are not subject to these axle limits until March 31, 1955.
k—Buses permitted 40 ft.; in Va. on designated highways; 42 ft. in Del.; 45 ft. in Okla.
m—Automobile transporters allowed 13½ ft. height.
n—Including tolerance.
o—Graduated to tire width.
p—26,000 lbs. on tandem axles 3 ft. 6 in. apart; applies June 1 to February 28; differs with season.
s—Permits may be granted for 60 ft. length.
t—Permits may be granted for 55 ft. length.
u—Buses with 3 axles permitted 40 ft. on designated highways subject to 18,000 lbs. per axle.
Table—Axle weights based upon tire widths.
NP—Not permitted.
NR—No restriction.
NS—Not specified.
P—Pneumatic tires.
S—Solid tires.
C—Permissible on "Class A" highways.
D—Permissible on "Class B" highways.
G—Axles less than 10 ft. apart limited to 16,000 lbs. per axle.
H—Maximum shown. In practice, permissible gross weight depends on chassis weight.

NOTE ON "W" AND ASTERISK

Except when shown by asterisk or when followed by the letter "W," the above gross weight limits are the limits fixed by state law.

When shown by asterisk the above limits are computations made by the National Highway Users Conference to show what it considers to be practical gross weights where gross weights are arrived at by application of one of the formulae shown below under Footnote "X." In making these computations, wheel base was arrived at by deducting 8 ft. total over-hang front and rear from permissible overall length of unit or combination; tandem axles were considered to be a minimum permissible distance apart. When actual over-hang is less than 8 ft. additional gross weight will be possible.

When followed by the letter "W," the limits shown are maximum possible weights where gross weight is determined by permissible axle weight. These limits are possible only when each axle carries a gross weight equal to the permissible axle limit as shown.

I—Permissible on balloon tires.
J—Permissible on other than balloon tires.
L—2-axle buses permitted 23,625 lbs. maximum net weight; 3-axle bus, 31,500 lbs.
T—With the following exceptions full trailers are permitted the same gross weight as other single units:—
Ala., Conn., Iowa, Ky.—Full trailers prohibited.
Mass.—Trailer and load limited to 3,000 lbs.
Tenn.—Trailer and load limited to 3,500 lbs.
V—Solid tires prohibited.
X—States where gross weight is determined by formula or by table of axle spacing. (See State under "Bridge Formulae" below or formula computations on next page.)
Z—See "Restrictions Peculiar to Certain States."

BRIDGE FORMULAE

Ala.—700 (L plus 40) when axles are over 18 ft. apart, otherwise 650 (L plus 40).

Ariz.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft. to 76,800 lbs. if spacing is 56 ft. or more.

Calif.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 76,800 lbs. if spacing is 56 feet or more.

Colo.—800 (L plus 40).

Del.—Gross weights graduated from 36,000 lbs. if axle spacing is 4 feet to 60,000 lbs. if spacing is 39 feet or more.

D. C.—Gross weights graduated from 38,000 lbs. if axle spacing is 4 ft. to 65,400 lbs. if spacing is 46 ft. or more.

Fla.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 64,650 lbs. if spacing is 45 feet.

Ga.—700 (L plus 40).

Idaho—Gross weights graduated from 30,500 lbs. if axle spacing is 3 feet to 72,000 lbs. if spacing is 56 feet or more.

Iowa—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 65,478 lbs. if spacing is 42 feet or more.

Kans.—Gross weight graduated from 32,000 lbs. if axle spacing is 4 feet to 63,890 lbs. if spacing is 44 feet.

Maine—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 50,000 lbs. if spacing is 27 feet or more.

Md.—850 (L plus 40) any unit or combination, provided gross weight of vehicle or combination is not over 65,000 lb.

Minn.—Gross weights graduated from 28,000 lbs. if axle spacing is 4 ft. to 66,500 lbs. if spacing is 42 ft. or more.

Miss.—Gross weights graduated from 28,650 lbs. if axle spacing is 4 ft. to 52,650 lbs. if spacing is 30 ft. or more.

Mo.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft. to 60,010 lbs. if spacing is 39 ft. or more.

Mont.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 76,800 lbs. if spacing is 57 feet or more.

Nebr.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 64,650 lbs. if spacing is 45 feet or more.

Nev.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 76,800 lbs. if spacing is 56 feet or more.

N. M.—Special ruling by State Highway Commission permits gross weights graduated from 32,000 lbs., if axle spacing is 4 feet; to 76,800 lbs. if spacing is 56 feet.

N. Y.—750 (L plus 40) three or more consecutive axles and any unit or combination.

N. Dak.—750 (L plus 40).

Ohio—800 (L plus 47½).

Okla.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 60,000 lbs. if spacing is 39 feet or more.

Ore.—Gross weights graduated from 32,200 lbs. if axle spacing is 6 ft. to 76,000 lbs. if spacing is 55 feet or more, provided that no vehicle or combination shall exceed 60,000 lbs. except under permit.

S. C.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft. to 68,350 lbs. if axle spacing is 50 ft. or more.

S. D.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 feet to 64,650 lbs. if axle spacing is 45 ft. or more.

Tenn. — Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft., to 55,980 lbs. if axle space is 37 ft. or more.

Texas—Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft. to 58,420 lbs. if spacing is 41 ft.

Utah—Gross weights graduated from 33,000 lbs. if axle spacing is 4 feet to 79,990 lbs. if spacing is 54 feet or more.

Wash.—Gross weight graduated from 32,000 lbs. if axle spacing is 4 feet to 72,000 lbs. if axle spacing is 53 ft. or more.

W. Va.—Gross weights graduated from 32,000 lbs. if axle spacing is 4 ft. to 73,280 lbs. If spacing is 57 feet, provided that no vehicle shall exceed 60,800 lb. except by permit.

Wisc.—1,000 (L plus 26) or gross weights graduated from 32,000 lbs. if axle spacing is 6 ft. to 68,000 lbs. if spacing is 40 ft. or more.

Wyo.—Gross weight graduated from 32,000 lbs. if axle spacing is 4 feet to 73,950 lbs. if spacing is 57 feet.

GROSS WEIGHTS COMPUTED BY FORMULAE

Computation of Gross Weights according to formulae, based on distance (in feet) between first and last axles, for States identified by State Size & Weight Limits chart by Footnote "X." It should be remembered that the figures in each column represent only a mathematical extension and are governed by Legal Overall Length Limits for single units and combinations of particular states. Also, that formula computations are superseded in some instances by specific limits given in the chart.

"L"—Distance in feet between first and last axles of group of axles considered. [6]—Vehicles with axles spaced 18 feet or less. [7]—Vehicles with axles over 18 feet apart.

NATIONAL HIGHWAY USERS CONFERENCE, INC., National Press Bldg., Washington, D. C.

Corrected to March 15, 1954, Copyright 1954

RESTRICTIONS PECULIAR TO CERTAIN STATES

ILL.—Limits shown are permissible on designated highways; otherwise limited to 16,000 lbs. on any one axle. Two-axle truck limited to 32,000 lbs. under registration law.

KY.—Limits shown are permissible on designated highways; otherwise limits are: height 11½ ft.; length—truck 26½ ft.; length—semi-trailer combination 30 ft.; gross weight 18,000 lbs.

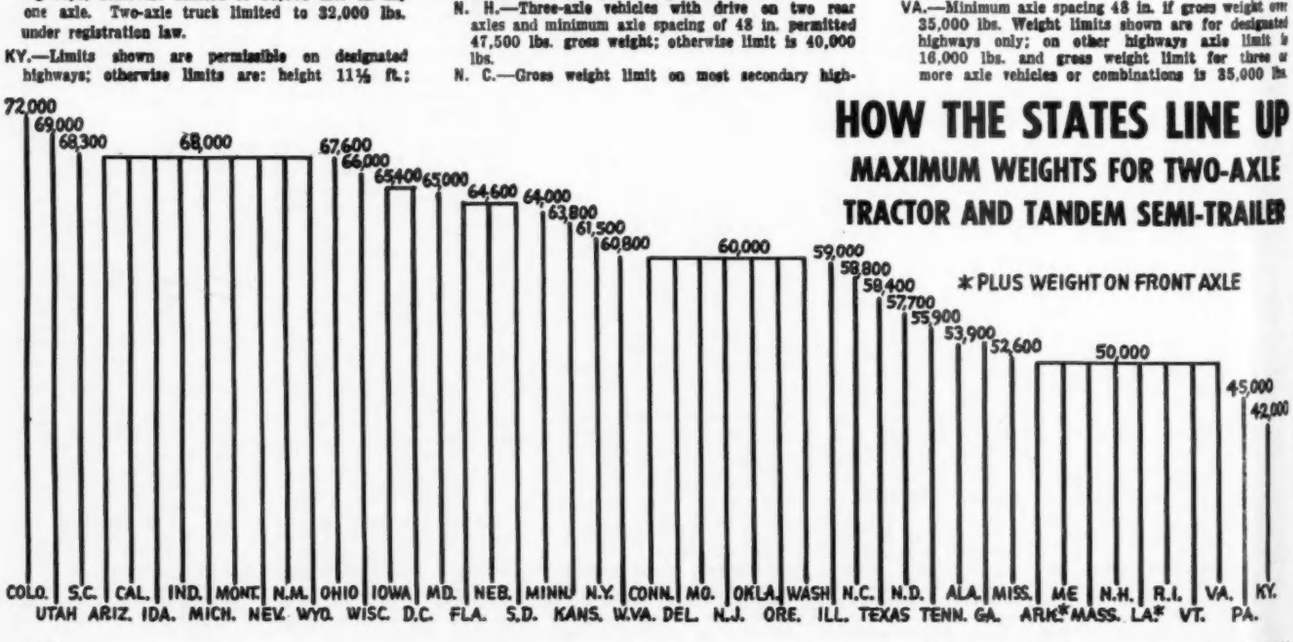
N. H.—Three-axle vehicles with drive on two rear axles and minimum axle spacing of 48 in. permitted 47,500 lbs. gross weight; otherwise limit is 40,000 lbs.

N. C.—Gross weight limit on most secondary highways 16,000 lbs. for two axles and 24,000 lbs. for 3 axles.

VA.—Minimum axle spacing 48 in. if gross weight over 35,000 lbs. Weight limits shown are for designated highways only; on other highways axle limit is 16,000 lbs. and gross weight limit for three or more axle vehicles or combinations is 35,000 lbs.

HOW THE STATES LINE UP

MAXIMUM WEIGHTS FOR TWO-AXLE TRACTOR AND TANDEM SEMI-TRAILER



Safety Equipment

Required & Permitted on Trucks, Truck-Tractors, Trailers & Buses

As Specified in I.C.C. Safety Rules & Regulations, State Motor Vehicle Laws & Official Rulings . . . and Compiled by National Highway Users Conference

TABULATION OF SAFETY REQUIREMENTS ON PAGES 128 & 129

EXPLANATION OF I.C.C. REFERENCES

‡—The I.C.C. Motor Carrier Safety Regulations apply to "Automotive Safety Equipment" on vehicles operated by common and contract carriers ("for hire" carriers) of persons or property and by private carriers of property, when operated regularly in interstate or foreign commerce, except when operated wholly within a municipality, between contiguous municipalities, or within a zone adjacent to and commercially a part of any such municipality or municipalities. When vehicles of common, contract or private carriers are transporting explosives or other dangerous articles the last-mentioned exception does not apply.

†—Requires "a device or other means of preventing or removing ice or frost" from windshield.

*—I.C.C. neither approves nor disapproves any individual required item. Its Motor Carrier Safety Regulations, however, set forth certain constructional details or performance standards to which certain items must conform. Reference should be made to the Motor Carrier Safety Rules for complete details.

COLOR AND REQUIREMENT SYMBOLS

A—Amber
G—Green
R—Red
N—No
NP—Not Permitted
NR—Not Required
NS—Not Specified
NSM—Not Specifically Mentioned
Y—Yes
Ye—Yellow
W—White
/—When used between two letters or numbers means "or."
Example—2/4 means "2 or 4."

GENERAL FOOTNOTES

a—Prohibits red light visible from in front of vehicle.

b—Prohibits red or green light visible from in front of vehicle.

c—Tail lamp or separate lamp shall illuminate rear license plate with white light.

d—Must be located and constructed so as to illuminate rear license plate with white light.

e—May be incorporated in tail lamp.

f—Semaphores required on school buses.

g—One or both may be incorporated in tail lamp or lamps.

h—Number plate must be illuminated with white light.

i—Also two yellow reflectors on front of truck 70 in. or more in width and bus over 7 passengers.

j—Also one amber reflector on front of vehicle.

k—One may be part of tail lamp.

m—Reflectors may be substituted.

n—Reflectors may be used when vehicle has acetylene lamps.

p—White, green or amber. Where green originally used, may be continued till replacements are necessary.

r—Yellow or orange flags required.

s—On vehicles over 45 feet long, rear clearance and marker lamps shall be in combination.

t—One green marker lamp every 10 feet on combinations over 33 feet long.

u—Vehicles manufactured after December 31, 1949, shall have double wipers.

y—Trailer and semi-trailers shall have one lamp on front visible from both sides.

z—Clearance and marker lamps may be in combination.

aa—Every vehicle 72 in. or more wide must have 2 amber, or clear front, and 2 amber, clear or red rear reflectors. Clearance lamps may be substituted. Reflectors must be approved. Clearance lamps need not be approved.

cc—Vehicles manufactured after January 1, 1943, shall have double wipers.

dd—On *interstate* buses—green lights adjacent to destination sign or near upper corners;
On *intrastate* buses—purple lights in same locations.

ee—Double wipers required on all school buses.

ff—Two yellow stop lamps required on all buses.

ii—Clearance and marker lamps may be in combination. When in combination there must be one such lamp on each side, midway of vehicle.

kk—Permits tinted other than red.

xx—Fog lamps are included within the term "Auxiliary Driving Lamps" and are treated accordingly.

Data Revised to March 15, 1954

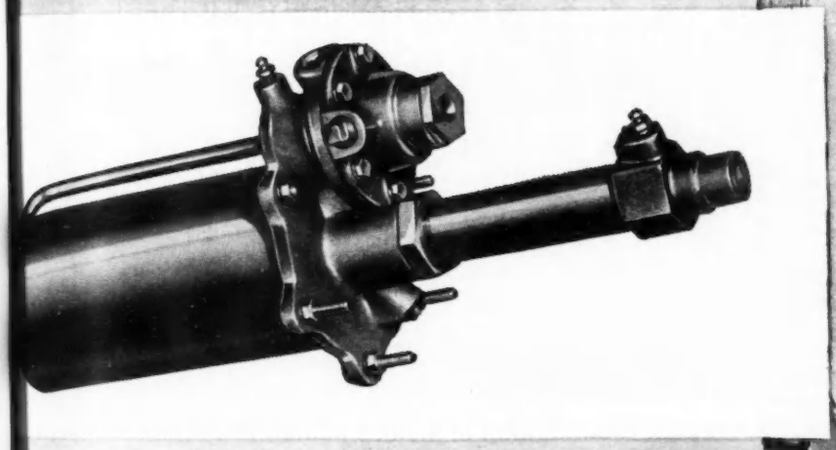
Bendix

AIR-PAK

combines the advantages of air power with hydraulic brake actuation



Here, with a single compact, easy-to-install power braking unit, truck manufacturers and operators can combine all of the well proven advantages of hydraulic brake actuation with an air brake system.

Bendix* Air-Pak changes air pressure into hydraulic pressure by means of two directly connected pistons. Thus, a non-compressible column of brake fluid instead of air connects between the driver's foot and the brake shoe. The result is faster brake action, more positive and better control.

Another important Air-Pak advantage is the fact that brakes can be applied instantly by foot power alone—an emergency standby when braking is required before air pressure builds up, or if air pressure fails for any reason.

Important, too, is the fact that Air-Pak is a product of Bendix, designer and builder of Hydrovac*, the world's most widely used power brake with over three million units now in use.

Thus Air-Pak benefits from a specialized engineering and manufacturing experience unrivalled in the automotive industry.

Descriptive folder on Air-Pak is available on request.

ABBREVIATIONS

*—Transmissions Synchronized.
†—Close Spaced Ratios.
‡—See 3-PT-65.
§—See 3-BX.
‡—Varies with Rev. Gear Ratios.
▲—Additional Ratio Optional at Extra Cost.
(1)—Spicer Mfg. Co.
(2)—Overdrive.
(3)—Also available with R10B overdrive.
L—Left side opening.
R-L—Right and left side openings.
R—Right side opening.
a—Lo-Low-2.10, converter stall ratio.
b—Overdrive ratio, 0.70 to 1.

Transportation Engineering Formulas

PISTON DISPLACEMENT

Piston Displacement in cu. in. = B × B × .7854 × S × No. of Cylinders

B = Bore
S = Stroke

.7854 = Constant comprising the conversion of the area of a square to the area of a circle of the same dimensions

VEHICLE SPEED

$$MPH = \frac{RPM \times R}{168 \times FGR}$$

MPH = Miles Per Hour
RPM = Engine Revolutions Per Minute
R = Rolling Radius in Inches
FGR = Final Gear Ratio
168 = A constant comprising the conversion of rolling radius in inches to wheel circumference in feet; wheel revolutions per minute to wheel revolutions per hour; feet per hour to miles per hour

HORSEPOWER

Maximum Net Horsepower (maximum gross horsepower less power consumed by engine accessories) is the only horsepower that should be used in transportation engineering formulas, and can be determined only by using a dynamometer or may be procured from the manufacturer

MAX. NET ENGINE TORQUE

Torque in lb. ft. = .80 × cu. in. Piston Displacement. (This is approximate and should be used only when actual torque is not known)

.80 = Average figure based on analysis of a number of torque curves.

AMA HORSEPOWER

(For License Purposes Only)

$$AMA\ HP = \frac{B \times B \times No.\ of\ Cyl.}{2.5}$$

B = Cylinder Bore
2.5 = Constant based on average engine in 1908

MAXIMUM NET TORQUE

$$Max.\ Net\ Torque = \frac{Torque\ at\ Peak\ HP \times 5}{4}$$

(This is approximate and should be used only when actual net torque is not known.)

5 and 4 = Figures based on an analysis of a number of torque curves

TORQUE AT PEAK HP

$$Torque\ at\ Peak\ HP = \frac{HP \times 5252}{RPM}$$

5252 = Constant resulting from the conversion of torque and RPM into horsepower

HP = Maximum net horsepower (See Horsepower formula)

Peak HP = Maximum useful horsepower

California

"We have used KromeX Ring Sets in all types of units with fine results. A 1951 Chevrolet taxi was driven over 90,000 miles after reringing with KromeX at 55,000. Oil consumption was still satisfactory and top cylinder wear did not exceed .010 in a total of 145,000 miles. Sealed Power KromeX Ring Sets give top performance in oil control and reduced cylinder wear."

Jack George, Service Manager, Chino, California

Michigan

"We recently installed a KromeX Ring Set in a straight 8 which was burning a quart of oil every 40 miles. After the second oil change at 1200 miles, oil consumption stopped. Power, performance, and gasoline mileage increased way beyond our expectation. This is only one of many KromeX jobs we have done, and to date we have never experienced a KromeX Ring Set failure."

W. R. Rodberg, Pingel & Rodberg, Niles, Michigan

New Jersey

"In my shop we install an average of two KromeX Ring Sets every week and I have yet to have a come-back. This includes trucks as well as cars. Seating is not a problem, either, as KromeX Ring Sets always seat fast enough to give complete customer satisfaction. Thanks for a quality product I can depend on 100%."

Phil Hornung, Hornung Automotive Service
West Orange, New Jersey

Read what Mechanics say about

Sealed Power KromeX

Piston Ring Sets

Missouri

"There is nothing but the best we can say about KromeX Ring Sets, which we have been using for the past year with wonderful results. Less drag, smoother running engines and a noticeable increase in gasoline mileage. We would definitely recommend Sealed Power KromeX Ring Sets to any and all who are interested in doubling piston ring life with less wear on cylinder walls."

E. B. Vawter, Vawter Brothers Garage, Marshall, Missouri

Massachusetts

"Recently we installed a Sealed Power KromeX Ring Set in a 1950 straight 8. The owner was a very fussy customer, and several weeks later he told us where he used to get 12 to 14 miles per gallon, he now gets 17. This car used 1 quart of oil in the first 400 miles, and none in the next 800."

George W. Chartrand, Joseph H. Chartrand
Hudson Auto Parts, Hudson, Mass.

North Carolina

"After approximately two years of installing Sealed Power KromeX Ring Sets, we are confident that they are a great improvement in the engine of today. We have experienced no difficulty, and when we install KromeX Ring Sets, we know we are giving our customers the best that money can buy, plus long, pleasant miles of additional service."

W. C. Alford, V. P., Yates Auto Service
Raleigh, North Carolina

THIRD AXLES

and

TRAILER SUSPENSIONS

(Continued on page 136)

NOTES ON HEADINGS

Column 1.—**—C—Chevrolet, D—Dodge, F—Ford, V—Various.

Note 1. Two-axle self-steering undercarriage uses any standard trailer axle.

Note 2. Suspension kit only is available for conversion of single axle trailers to tandems.
†—13,000 lb. axle available in 68.1 and 69.5 track.
††—17,000 lb. axle available in 71.5 track.

Column 2.—Not to be confused with the total capacity made possible on the converted vehicle.

Column 3.—The price of the unit includes the standard brakes specified in brake column and frame extensions.

Column 4.—Weight of third axle unit includes all appurtenances and maximum tires.
*—Does not include axle.
**—Does not include frames, wheels, axles, etc.

Column 15.—Attachment unit only.

CA—Cast Alloy Iron

‡‡—On application.
(a)—Long slip-spline joint supplied for drive axle in place of radius rods.
(f)—Optional equipment.
(g)—Round, square or I-sectional axles.
(h)—Available with hand or electric cab-operated hydraulic pump for transferring axle load for added traction or for raising axle clear of ground.
(j)—Includes weight of hydraulic load transfer system.
(k)—Original track mainspring and overload spring also used.
(x)—Patented 4-wheel chain drive available.
(y)—All Truxmore units equipped with radius rods on driving axle and load distribution may be adjusted within limits shown in columns 6 and 7.
(z)—Depends upon installation.
Var—Various
(1)—A—16½x5½
(2)—A—16½x6
(3)—A—16½x5

fleet owners—get this free engine "blood test"

Give Us One Pint Of Used Motor Oil —We'll Give You A Complete Engine Analysis That May Save Costly Repairs

Here's a chance to get a *free* scientific analysis of your car or truck engine that may save you expensive repair bills. Just give us one pint of used motor oil from the engine. We'll send you a complete report on what may go wrong, what causes it, and what to do about it.

This Pure-sure Analysis is available to Pure Oil customers on a regular basis. We want you to *see for yourself* how valuable it is, how much it can save you in maintenance costs, and how it can increase the efficiency of your fleet. For these reasons, we'll give you a *free* Pure-sure Analysis without obligation.

For complete information, call your local Pure Oil office or mail the coupon today.

Be *sure* with Pure PURE — THE PURE OIL COMPANY, U.S.A.

Sales Offices located in more than 500 cities, including:
Minneapolis • Madison • Chicago • Columbus, O. • Detroit
Toledo • Cleveland • Memphis • Norfolk • Charlotte • Birmingham
Atlanta • Pensacola • Jacksonville • Miami

This offer must be limited to areas where Pure Oil products are sold.

The Pure Oil Company, Department CC-44
35 East Wacker Drive, Chicago 1, Illinois

Send me information on how I may obtain a Pure-sure Analysis of my used motor oil without cost or obligation.

100,000 MILES WITH MOTORS UNTOUCHED USING CITIES SERVICE C-800 MOTOR OIL!

CONSTANTLY ON THE MOVE. Fleming delivers local and long distance for Pep Boys, one of the largest automotive supply houses in the East.

75,000 GALLONS OF CITIES SERVICE GASOLENE power Fleming trucks through the year. They find it's the best for mileage, power and economy.

Ten Fleming Tractors Pass The 100,000-Mile Mark With Heads, Pans, Wheel Bearings And Motors Untouched!

Of course, you expect a high-quality tractor to give you long-range trouble-free performance, but when you can get by the 100,000-mile mark without a bit of trouble with any of the "hot spots"... you're getting a lot of help from somewhere!

AND THAT'S HOW THE FLEMING PEOPLE FIGURE IT! They say, "A great deal of this success is due to using your C-800 Motor Oil, your Trojan A Greases and Cities Service Regular Gasolene. With 10 tractors, 12 trailers, you can readily see that operating economy is a must with us. With Cities Service Products, our operating costs have gone down and we're really happy."

MR. FLEET OWNER: Try the complete Cities Service line for your trucks or busses and enjoy a big operating savings. Call your nearest Cities Service office or write Cities Service Oil Co., Sixty Wall Tower, New York 5, New York.

QUALITY PETROLEUM PRODUCTS

Traction Test Facts

This stop and go traction data was developed by the National Safety Council Committee on Winter Driving Hazards during recent braking tests over various road conditions. Stopping distances for trucks equipped with various safety devices are shown in the second column. The percentages in the third column represent the maximum grade that can be climbed by a vehicle equipped as indicated when the road is covered with glare ice or hard packed snow. Note: A one hundred per cent grade is equivalent to a rise of one foot for every hundred feet of travel.

	Stopping Distance in Feet from 20 mph	*Traction in Per Cent Gradeability*
Glare Ice at 20 F		
Conventional tires	209	3%
Winterized mud-snow tires	190	4%
Unit chains	160	11%
Sanders	134	13%
Regular tire chains	130	12%
Regular dual chains	98	18%
Reinforced single chains	91	20%
Hard Packed Snow		
Conventional tires	62	6%
Winterized mud-snow tires	51	8%

*—For an accurate formula used in figuring revolutions per mile, see p. 135.
(a)—Dual spacing with chain—16.9; without chain—15.8. Disregard columns 7 and 8.

Data excerpted from Tire & Rim Association, Inc. Yearbook.

STEEL-VENT'S 2-WAY ACTION DOES IT!

1 EXTRA OIL-CARRYING CAPACITY puts more oil on cylinder walls—for extra lubrication in the wear zone.

2 EXTRA OIL-DRAINING CAPACITY lets excess oil drain back into the crankcase—controls oil pumping.

Two-Way oil control permits the right amount of oil to circulate the split-second it's needed to protect vital friction zones. The Steel-Vent is designed to meter a generous amount of lubrication up to the compression ring wear zone—holding wear to the absolute minimum.

And Steel-Vents can't clog—with every stroke of the piston, Steel-Vents flush away all carbon deposits. You'll never see a clogged Steel-Vent.

In hundreds of thousands of re-ring, re-bore and re-sleeve installations, Hastings Steel-Vent Piston Rings have proved they reduce cylinder wear and stop oil pumping.

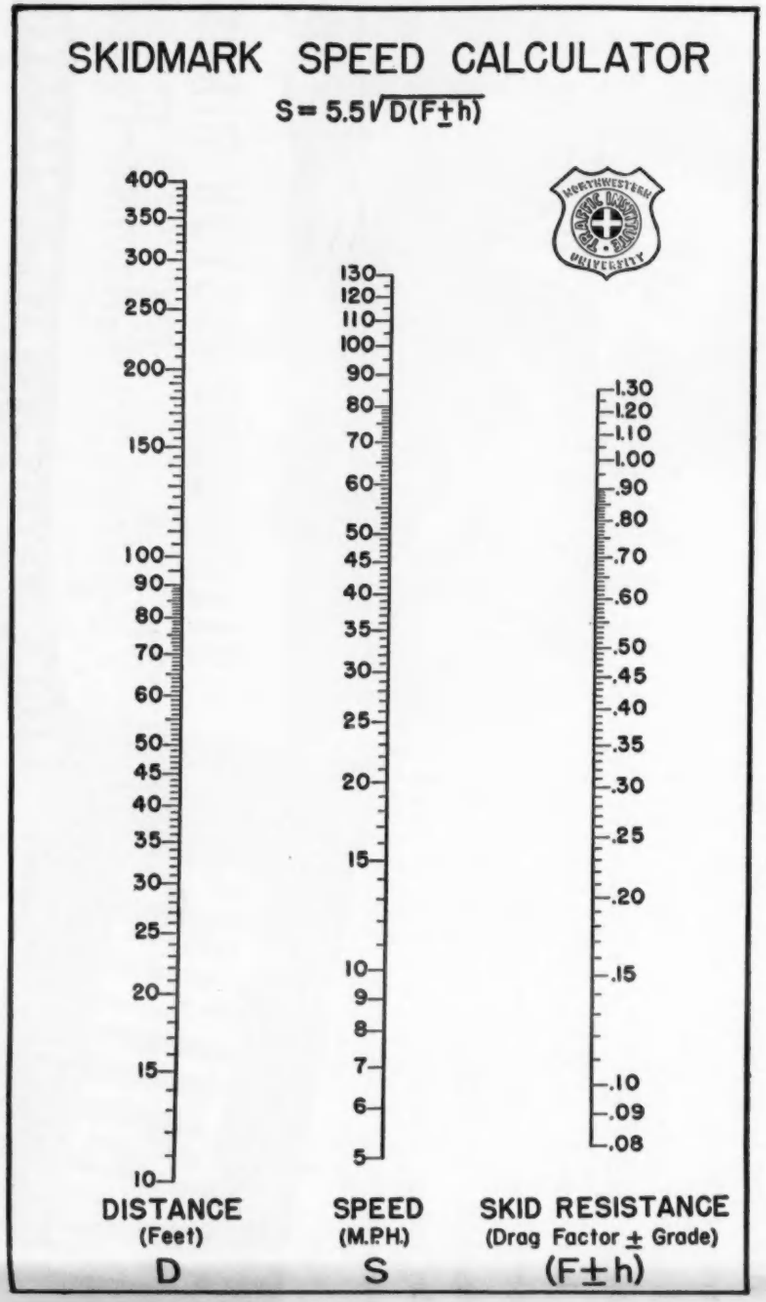
Skidmark Speed Calculator



Speed Estimator

To use: To determine the speed which produced a set of skid marks, total the length of all skid marks and divide by the number of wheels on the vehicle. This will give you a distance in feet which you will note in the column marked "D." Next determine the type of road surface and match it as nearly as possible with the column marked "F." Lay a straightedge between the distance you have determined in column "D" and the road surface you have located in column "F." The point at which the straightedge crosses column "S" will indicate the speed at which the vehicle was traveling. Chart below shows possible ranges of pavement drag factor for rubber tires. Source: The Traffic Institute, Northwestern University.

Selected Fleet Films

A list of 16 mm films designed to cut mechanic training time, improve driver and shop safety, increase public understanding of the industry's importance

THIS list of 16 mm films has been carefully selected to help truck and bus fleet operators cut mechanic training time, improve driver and shop safety, and increase public understanding of the industry's importance. It represents a consolidation and complete revision of the lists published in February, March and May last year.

For your convenience, it has been divided into three sections: (1) Maintenance—see below, (2) Safety—page 198, and (3) Public relations—page 210. Maintenance supervisors and safety directors should consider use of films listed in the Public Relations section as a means to obtain employee understanding of the importance of their part in the highway transportation industry. Increased efficiency can result from high morale and pride in the job being done when these films are shown.

Most of these films are available for your use without cost—you pay only transportation and insurance. Others carry a nominal rental charge. Projectors for showing them, if not otherwise obtainable, can usually be rented in any city at low cost. Because of demand, films should be ordered as far in advance as possible. Films in this list are sound films unless otherwise indicated and *should never be shown in silent type projector* as it destroys the sound track.

In each section, films are arranged alphabetically by title under an appropriate sub-heading. Following the title is the running time, a brief description of the film, whether free loan or rental, and a numerical reference to the source list beginning on page 216. Where more than one source is given, it is generally advisable to write to the closest address.

MAINTENANCE FILMS

THIS list of maintenance training films will provide effective and efficient instruction for mechanics in bus and truck fleet shops. The step-by-step procedures and the basic background material provided in the films will ideally supplement other instruction, save you time and money in the long run. Arrangement of the films in this section is as follows:

1. Gasoline Engines
2. Diesel Engines
3. Gas Turbine Engines
4. Ignition, Electrical Systems
5. Brakes
6. Bearings
7. Lubrication
8. General Maintenance
9. Welding
10. Handling Aluminum

Gasoline Engines

The ABC of Internal Combustion—13 min—Animated, color film explaining basic principles of internal combustion engines. Free loan—30.

The ABC of the Automobile Engine—18 min—Animated, color film describing in detail parts and workings of internal combustion engines. Follow-up film to "The ABC of Internal Combustion." Free loan—30.

Flames of Progress—11 min—Shows actual combustion in a gasoline engine and demonstrates engine knock using a special transparent cylinder head. Free loan—24.

The Power Within—20 min—Describes the creation of power in the automobile internal combustion engine, illustrating the operation of each part, and explains how power is transmitted to the rear wheels. Free loan—72.

APPROVED for leading NATIONAL FLEETS

Sherwin-Williams KEM Transport Enamels are approved and recommended finishes for the fleet equipment of many leading national fleet operators such as the Goodyear Tire & Rubber Company, The Coca-Cola Company, Dad's Root Beer Co., Allied Van Lines, Gray Line Sight-Seeing Tours, City Products Company, Pepsi-Cola Company and many others.

"BEST-KNOWN NAME IN FINISHES"

helps sell service for the

"GREATEST NAME IN RUBBER"

When your business runs on wheels, smart-looking equipment is just good sense. It comes down to the important fact that, to keep trucks attractive and sales inviting . . . with a minimum of repaints . . . you need the toughest available finishes.

That's why KEM® Transport Enamels are approved and specified by so many leading operators of fleet equipment. For example, the Goodyear Tire & Rubber Company—long a leading name in rubber. They've found that these long-lasting, fast-drying, dirt and chemical-resistant finishes short-cut time out for refinishing and keep equipment out of the paint shop longer. It all adds up to real cash savings.

KEM Transport Enamels are specially designed to resist effects of heat, cold, moisture, abrasion, grease, gasoline and rough handling. They represent the highest type of synthetic formulation developed by Sherwin-Williams Research Laboratories.

Try KEM Transport Enamels on your next refinishing job. They're available through your nearby Sherwin-Williams "OK" Automotive Jobber. Or write for name of distributor nearest you. The Sherwin-Williams Co., Automotive Division, Cleveland 1, Ohio.

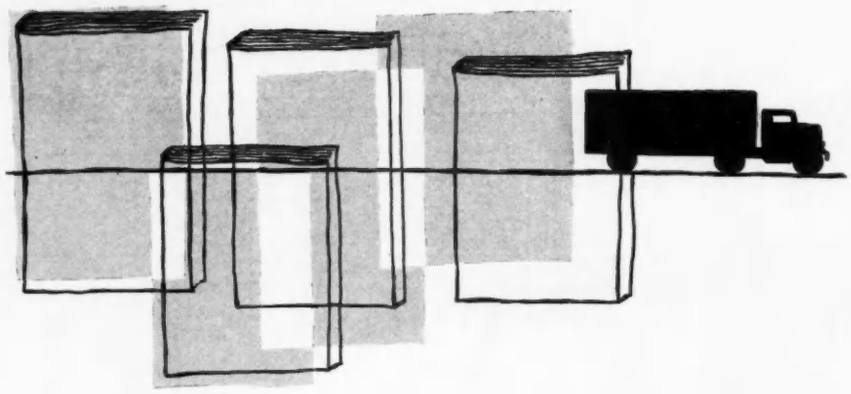
AUTOMOTIVE FINISHES



Selected Maintenance Manuals

This selected list of maintenance literature contains valuable information for those responsible for the repair and service of equipment. The following pages contain brief descriptions of manuals, folders, charts and booklets on a variety of specific subjects. Many are provided free of charge. Some of the more complete publications are available at a nominal charge. Addresses of the manufacturers offering them are given here for your convenience in ordering. Note that this literature has been grouped under general headings:Axles Springs, Wheels; Brakes; Cooling System; Clutches, Transmissions; Electrical, Ignition; Engines; Fuel Systems; Fuels, Lubricants; Tires; and Tools and Equipment.

Axles, Springs, Wheels

Timken-Detroit Field Service Bulletins—Various bulletins describing assembly, maintenance, lubrication, brake service, etc., on various Timken-Detroit axles. Requests should include information desired and model number of unit. Free—Technical Publications Manager, Service Engineering Dept., Timken-Detroit Axle Division, Rockwell Spring and Axle Co., Detroit 32, Mich.

Timken Wall Chart—Illustrates and describes adjustment and assembly of Timken-Detroit hypoid helical two-speed, double-reduction drive units. Free-address as above.

Eaton Handbooks—Various bulletins describing service and maintenance procedure on Eaton two-speed axles, two-speed axles with electric shift controls, Model No. 36M tandem-drive axles, electric shift for Timken two-speed axles. Requests should indicate information desired and model number of unit. Free—Sales Promotion Manager, Axle Division, Eaton Mfg. Co., Cleveland 10, Ohio.

Tips on Spring Service and Inspection—29 pages—Covers leaf spring technical data briefly, including construction, lubrication, adjustment and maintenance. Each 25¢—Leaf Spring Institute, 2100 Keith Bldg., Cleveland 15, Ohio.

Truck Rim Identification and Operating Manual 39 pages—Illustrates and describes various types of truck wheel rims and dual wheel construction. Includes tire mounting and demounting instructions with a special section on rim accidents. Free—from members of the National Wheel and Rim Assn. For name of closest member, write the association at 208 West St. Clair Ave., Cleveland 13, Ohio.

Bear Wheel Alinement, Axle and Frame Straightening Service—approx. 160 pages—Illustrates and describes Bear wheel alinement, including data on various types of suspensions, wheel balancing and steering system adjustment. Procedures and equipment for axle and frame straighening are illustrated and described. Each $2.00—Bear Mfg. Co., Rock Island, Ill.

Weaver Course in Wheel Alinement—159 pages—Describes and fully illustrates service and maintenance procedures for proper wheel alignement. Sections also are included on tire alinement, axle straightening, wheel balancing and steering mechanism adjustment. Each about $1.00—Sales Department, Weaver Mfg. Co., Springfield, Ill.

Bean Wheel Alinement Specifications—Charts giving wheel alinement specifications. Include model number of vehicle when requesting information. Free—Automotive Dept., John Bean Division, Food Machinery and Chemical Corp., Box 840, Lansing 4, Mich.

Brakes

Bendix-Westinghouse Brake Maintenance Manual—224 pages—Complete description of Bendix-Westinghouse Air Brake System, including assembly, service and maintenance procedures. Each $1.00—Advertising Dept., Bendix-Westinghouse Automotive Air Brake Co., Elyria, Ohio.

Operation and Maintenance Instructions Bendix-Westinghouse Air Brake Equipment—Folder briefly describing maintenance and operation of Bendix-Westinghouse air brake. Free—address as above.

Fundamentals of Brakes, No. 5059—Folder describing basic physical forces in braking of vehicles, including coefficient of friction, transfer of motion energy to heat energy, effect of horsepower, weight and speed on braking, stopping distances, leverage and deceleration. Free—address as above.

Delco Brake Service Manual—Covers brake servce, maintenance and care of Delco brakes. Free—Merchandising Manager, Delco Brakes, United Motors Service, Division of General Motors Corp., General Motors Bldg., Detroit 2, Mich.

Grey-Rock Brake Service Manual—56 pages—Description of parts and operation of major brake systems and makes. Includes assembly, service and maintenance procedures for brakes and related components. Each $2.50—Advertising Dept., Grey Rock Division, Raybestos-Manhatten, Inc., Manheim, Pa.

THEY'RE ALL JALTEN!

J&L's New JALTEN series enables you to select low-alloy, high-strength steel in the following combinations of advantages:

JALTEN No. 1 — High strength, good formability and fabricating —good resistance to low temperature impact.

JALTEN No. 2 — High strength, moderate forming—improved resistance to atmospheric corrosion.

JALTEN No. 3 — High strength—improved resistance to abrasion.

Remember to specify JALTEN High Tensile Steel for

- **HIGH STRENGTH • RESISTANCE TO CORROSION**
- **GOOD FORMABILITY • RESISTANCE TO ABRASION**

J&L STEEL

Jones & Laughlin
STEEL CORPORATION — *Pittsburgh*

The data you want is in this book:

- Chemical Properties of Jalten
- Mechanical Properties of Jalten
- Jalten Equivalents
- Jalten Application Data

Jones & Laughlin Steel Corporation
Dept. 432, 3 Gateway Center, Pittsburgh 30, Pa.

Please forward a copy of your booklet, Jalten low-alloy, high-strength steel.

ABBREVIATIONS

♦—Two used.
‡—Torque converter.
♦—Also available with Cummins JBS-600 engine.
▼—Also available with International RD-450 engine.
††—Right side, 13 leaves; left side, 14 leaves.
†—Front, 14⅞; rear, 15.
•—Hundred rpm.
▲—Air suspension.
‡—City, 44; Suburban, 42 or 45.
a—Main bearings.
b—Wrist pins.
c—Connecting rods.
d—Camshaft.
e—Accessory drive.
f—Valve lifters or rocker arms and shafts.
g—Timing gears or chain.
h—Air compressor.
i—Balancer shaft.
A—Air.
AL—Electric Auto-Lite Co.
BB—Borg & Beck.
Ben—Bendix Products.
BL—Brown Lipe Div.
Bos—American Bosch Div.
Bui—Buick Motor Div.
Ce—Centrifugal.
CIC—City and intercity service.
Cla—Clark Equipment Co.
Cont—Continental Motors Corp.
Cr—Cranking speed.
CS—City service.
CSS—City and suburban service.
Cum—Cummins Engine Co.
D—Diesel fuel.
Do—Downdraft.
DR—Delco-Remy Div.
Ds—Drive shaft.
Fag—Fageol.
Fe—Ford Motor Co.

▲ Just before going to press ACF-Brill announced the sale of its plant in Philadelphia to the Penn Fruit Co. of Philadelphia which operates a chain of supermarkets. A statement issued later by ACF-Brill Motors Co. stated it would

continue to operate its own bus and trolley coach service parts division at Philadelphia, along with the service parts business of its Hall-Scott Motors Division of Berkeley, Calif.

NEW HEATER-DEFROSTER

SMALLER IN SIZE ...BIGGER IN OUTPUT!

The new EVANS ED-75

SMALL
only 8-1 16" x 8-5 16" x 8-3 8"

POWERFUL
17,800 BTU Output

EFFICIENT
split core and tank travel water further — heat lingers longer

HEAVY DUTY
"Continuous service" bus type motor — heavy duty truck service core

ADAPTABLE FOR RECIRCULATING OR FRESH AIR
Simple to connect to top or side cowl for fresh air intake

Provides more heat output than any other heater-defroster of its size

Each Evans unit is custom engineered for its specific vehicle installation, to provide a completely satisfactory heating and ventilating system. Evans units are available for a wide variety of commercial vehicle applications.

The Evans organization is staffed to engineer units to specification, organized to build prototypes quickly, equipped to conduct precision tests to latest A.S.H.V.E. procedures. Military experience dating back to World War I qualifies Evans to work with you in meeting the rigid specifications of the Armed Forces. If your needs are for high performance, ruggedly constructed equipment—it will pay you to consult Evans Products Company, Heating & Ventilating Division, Dept. Q-4, Plymouth, Mich.

EVERY EVANS HEATER IS EQUIPPED WITH THE FAMOUS EVANS UNBREAKABLE LIGHTWEIGHT FAN

Precision die-molded airfoil section blades . . . move *more* air with *less* noise and current draw . . . will not chip, crack or bend . . . unaffected by temperature . . . one piece construction.

EVANS ... BALANCED HEATING & VENTILATING **CUSTOM HEATERS** ... FOR EVERY TRUCK AND BUS

CCJ's Truck Specifications

COMPILED FROM DATA SUPPLIED EACH MONTH BY MANUFACTURERS

KEY TO DEFINITIONS

MAKE AND MODEL

Only Domestic Truck Models are listed.

OPTIONAL UNITS

For the express purpose of best fitting the truck to the individual job most of the models listed can be provided with optional engines, transmissions, axles, etc., and these models when so equipped are considered standard stock models.

CHASSIS LIST PRICE

The chassis list price applies to the minimum standard wheelbase with standard tires and standard equipment. All prices are F.O.B. factory. Chassis list price does not include the price of the Cab unless otherwise noted.

RECOMMENDED GROSS VEHICLE WEIGHT FOR NORMAL SERVICE

The Gross Weights published herewith are those supplied by manufacturers as their Recommended Gross Vehicle Weights for Normal Operating Conditions, and are based upon the Maximum Authorized Tire Size listed. In actual practice the manufacturer may either increase or decrease the gross vehicle weight rating when either favorable or unfavorable operating conditions are involved. Since the proper performance of a motor truck depends upon many factors, including grades, road conditions, etc., the gross weights that a manufacturer is prepared to recommend will vary with particular conditions, and the manufacturer's own standard of safety factors. Specific recommendations, therefore, should be obtained from the manufacturer's representative.

CHASSIS WEIGHT

The chassis weight listed includes the weight of the minimum standard wheelbase chassis, with cowl, with standard tires, with standard equipment, with crankcase and cooling system full, and 5 gallons of fuel in the tank. It does not include the weight of the Cab. This applies to C.O.E. as well as conventional chassis types. Exceptions are noted.

STANDARD TIRE SIZE

The standard tire size listed is that which is included in the Chassis List Price.

MAXIMUM AUTHORIZED TIRE SIZE

The tire size listed in this column is the maximum size recommended by the manufacturer of the chassis for the Gross Vehicle Weight for Normal Operating Conditions. It is furnished at extra cost, if it differs from the standard size. Dual rears are understood; exceptions noted.

MINIMUM STANDARD WHEELBASE

The minimum standard wheelbase is the so-called standard wheelbase on which the Chassis List Price is based.

MAXIMUM STANDARD WHEELBASE

The maximum standard wheelbase is the extreme end of the standard range of wheelbases offered by the chassis maker.

MAXIMUM BRAKE HP.

Maximum Brake Horsepower at Given R.P.M. is actual dynamometer reading without accessories.

GEAR RATIO RANGE

Gear Ratio Range in High—Ratios within the range given are available at no extra cost. Exceptions are noted.

TRACTORS

Unless given the designation (N)— meaning not available as a tractor—all standard models may be assumed to be available as tractors. Exclusively Tractor models are designated (T).

The best costs less than the rest...

HEIN-WERNER

—the lowest priced major line of hydraulic jacks

Unbelievable but true! Hein-Werner Hydraulic Jacks—quality standard of the industry—are priced lower than any other major line. Starting at only $8.80, the complete line includes models of 1½, 3, 5, 8, 12, 20, 30, 50, and 100 tons capacity.

You owe it to yourself to compare them dollar-for-dollar and feature-for-feature with any other jacks on the market. You'll find them the best buy . . . by far! And remember, Hein-Werner manufactures and sells more hydraulic jacks than any other company in the world today.

See your H-W jobber or write us

LOOK AT THESE VALUE-PACKED FEATURES:

- **Pressure Tested Castings**
- **Extra Large Base**
- **Positive Action Release Valve**
- **Circular Grooved Ram Head**
- **Center-Balanced Malleable Handle Socket**
- **Vertical or Horizontal Positioning**
- **Safety By-Pass to Prevent Over-Travel of Ram**
- **Factory Tested at 1½ Times Rated Capacity**

HEIN-WERNER CORPORATION
WAUKESHA, WISCONSIN

Hein-Werner HYDRAULIC JACKS

The complete Hein-Werner line of hydraulic jacks includes: Under-Axle Jacks of 1½ to 100 tons capacity . . . "Bumper-Lift" Jacks for passenger cars . . . "Swift-Lift" and Service Jacks for shop use . . . Adjustable Car Stands . . . "Push and Pull" and "Pushmaster" Jacks for body, fender, and frame repair work.

Ford parts in your Fords put profits in your pocket!

They cut down-time way down. And they're made right to really last!

Replace worn linings with **Genuine Ford Brake Linings.** They pass as many as 3,250 tough tests before approved for manufacture. They give you extra safety . . . extra long life.

Get a **Genuine Ford Muffler** to replace a leaky, dangerous one. Ford Mufflers are double wrapped to resist corrosion, last longer on your Fords . . . "tuned" to the particular requirements of your Ford engines.

It certainly pays to standardize on Genuine Ford Parts. For you know *exactly* what you're getting . . . parts that are built to the same rigid specifications as the parts originally used in your Fords; parts that are test-track proven, by the same engineers who built your Fords, before being approved for manufacture. This means: Genuine Ford Parts are exact replacements—so are easy to install quickly—and are built to last. Your Fords are back on the road again in a hurry—and they stay there longer.

Yes, fleet owners have learned that Genuine Ford Parts save money. They're readily available, too—through 6,400 convenient Ford Dealers.

KEEP YOUR FLEET ON ITS FEET

GENUINE Ford PARTS

St. Louis 14, Mo.

Dear Sirs:

Keeshin drivers log a lot of miles while hauling throughout the east and middlewest. It's natural in a fleet as large as ours, to put extra emphasis on safety and performance. So, as general superintendent of maintenance I make sure I specify parts and equipment that will help lengthen the service life of vehicles and keep maintenance costs at a minimum.

I am especially happy to report that Wagner Rotary Air Compressors more than meet the requirements we have set for safety and dependability. As long as these compressors have been in operation at Keeshin, we have had no compressor failure, no valve trouble, or road failure due to lack of adequate air pressure.

All in all, our experience and records clearly show that Wagner Air Brakes are more economical to maintain and have boosted our brake service mileage 30% before general overhauling was necessary.

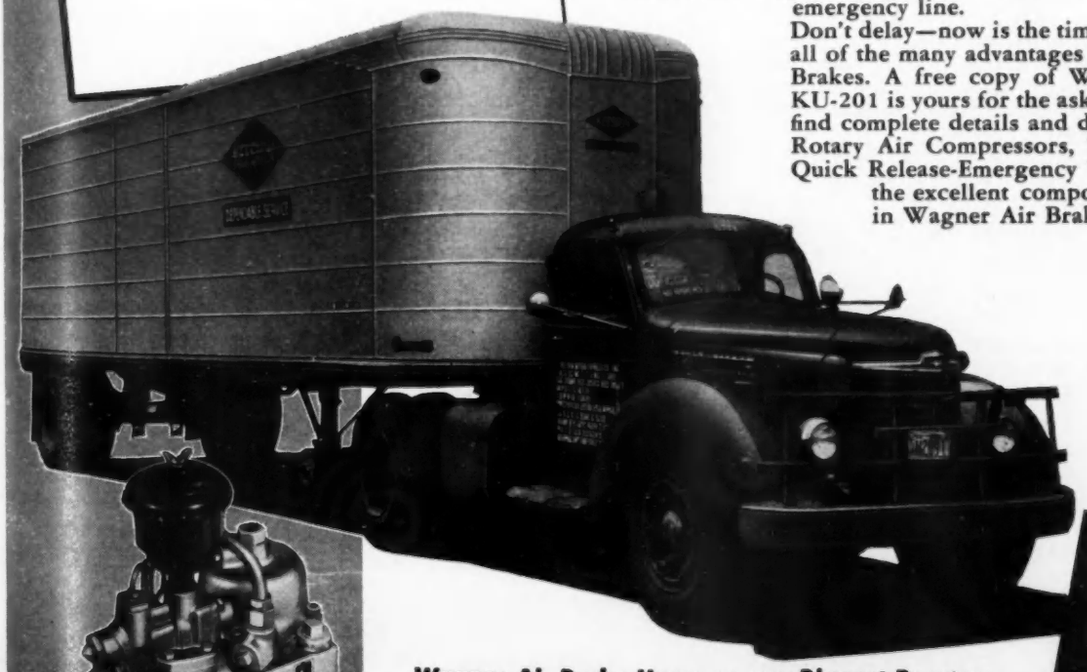
Sincerely yours,
John M. Dillion
John M. Dillion,
Gen. Supt. of Maintenance

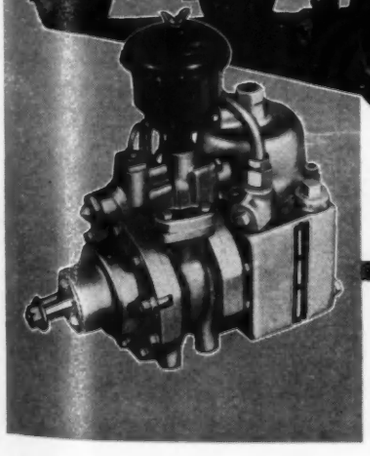
The record of Wagner Air Brakes speaks for itself. Men, like John Dillion of Keeshin Motor Express Co., Inc., know they can trust their safe, reliable performance. Their own maintenance records prove beyond any doubt that the Wagner Rotary Air Compressor, standard on all Wagner Air Brake Systems, lasts longer, operates better, requires less repair and assures an ample supply of air pressure while in operation to meet any road stopping emergency. Every Wagner Rotary Air Compressor has these unexcelled, superior features:

- **Rotary motion to reduce friction loss**
- **Maintains uniform torque load**
- **Assures fast air recovery**
- **Compact installation**
- **Reduces carbon and sludge formation**
- **Easy, infrequent preventive maintenance**

Another dependable member of the family of Wagner Air is the Wagner Relay-Quick Release-Emergency Valve for greater trailer breakaway protection. This emergency unit automatically applies trailer brakes if there is an abnormal drop in the pressure maintained in the trailer emergency line.

Don't delay—now is the time to investigate all of the many advantages of Wagner Air Brakes. A free copy of Wagner Bulletin KU-201 is yours for the asking. In it you'll find complete details and data on Wagner Rotary Air Compressors, Wagner Relay-Quick Release-Emergency Valves, and all the excellent components available in Wagner Air Brake Systems.





Wagner Air Brake Users are our Biggest Boosters.

"WORLD'S LARGEST TRUCK"

VICKERS® HYDRAULICS

Dart Model 60 Truck is shown carrying full 75-ton payload.

This Dart behemoth with a gross vehicle weight of 240,000 lb is said to be the largest truck in the world. It has two engines totaling 700 horsepower. Everything about it is on a colossal scale.

A new hydraulic circuit was developed by Vickers expressly for Model 60. The driver steers this truck with no more effort than he would a passenger car as the steering gear merely actuates the valve that controls the flow of oil to the steering cylinders. Twin cylinders provide 50,000 lb steering force (at 1000 psi oil pressure) for the dual front wheels.

Dart is thoroughly familiar with the many advantages of Vickers Hydraulic Power Steering having used it since 1938.

Vickers hydraulic equipment is available for all types and sizes of mobile equipment. Ask for new Catalog M-5101.

Vickers hydraulic power dumps the load; twin hoists are rated at 130,000 lb push at 1000 psi oil pressure.

VICKERS Incorporated

DIVISION OF THE SPERRY CORPORATION

1418 OAKMAN BLVD. • DETROIT 32, MICH.

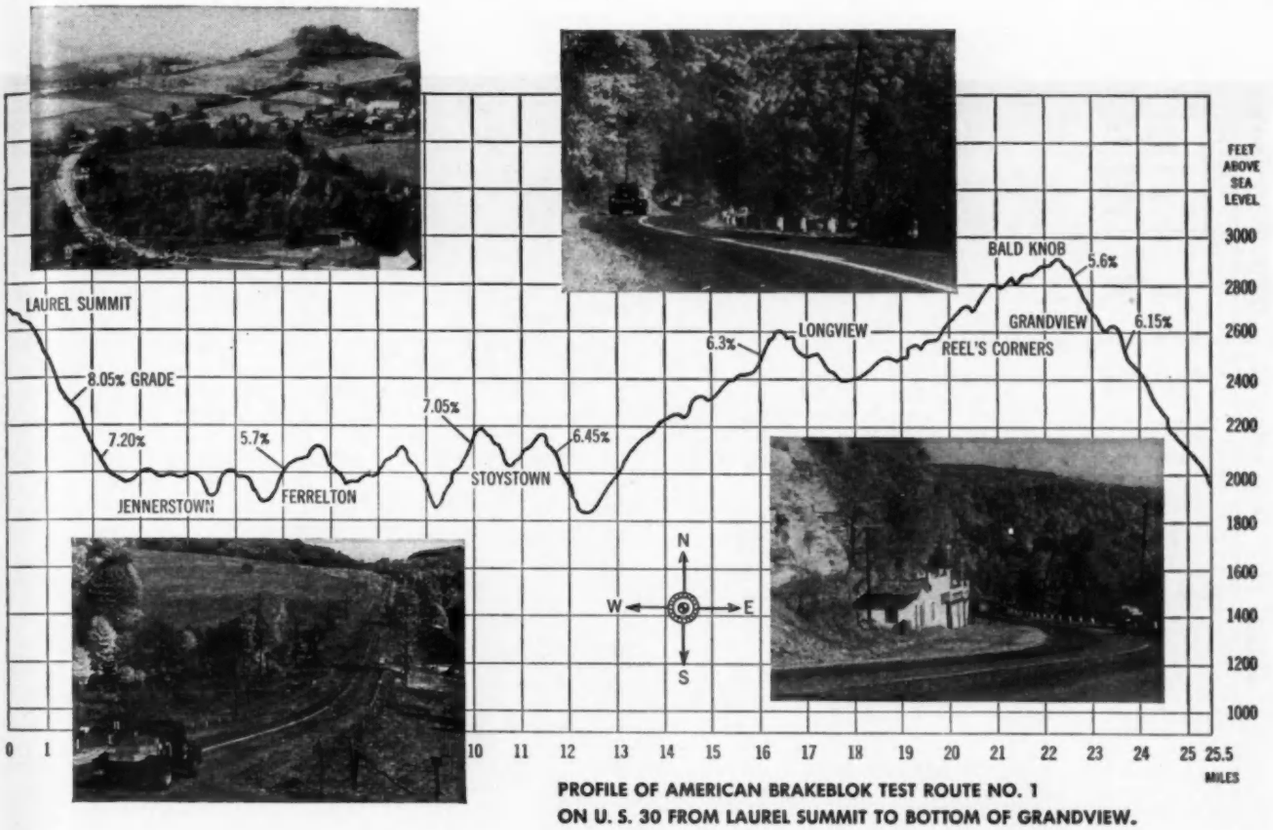
TORTURE TRACK *25.5 MILES LONG!*



PROFILE OF AMERICAN BRAKEBLOK TEST ROUTE NO. 1
ON U. S. 30 FROM LAUREL SUMMIT TO BOTTOM OF GRANDVIEW.

. . . to develop the best brake lining for you

American Brakeblok Test Trucks follow this course daily. Under all conditions of load the lining is put through every possible test—performance, fade, recovery, moisture sensitivity, wear, glaze, and maximum heat resistance. Accurate instrumentation records test data for interpretation by our research staff.

The mountains of Pennsylvania were selected because of their sharp grades, long descents, hairpin curves and dangerous intersections, giving the best opportunity for testing brake lining through a wide range of operating conditions.

On this track . . . today's brake linings are perfected—tomorrow's proven . . . for maximum safety, performance and life.

American Brakeblok

AMERICA'S SAFETY BRAKE LINING

AMERICAN Brake Shoe COMPANY

AMERICAN BRAKEBLOK DIVISION
DETROIT 9, MICHIGAN

Plants in: Detroit, Michigan; Winchester, Virginia; Lindsay, Ontario; Gif, France

West coast operator specifies Alcoa Aluminum Forged Disc Wheels for toughest applications!

"In mountain logging, we have to use equipment that will 'take a beating'.

Wheels, in particular, have to hold up . . . so I started looking around.

Other truckers were switching to Alcoa Aluminum Forged Disc Wheels . . .

So I decided to try 'em.

I can tell the difference already! These wheels are really tough!

What's more, they run truer, balance easier . . . and my drivers love 'em!"

Superior strength, truer running qualities and ease of balancing are only a few of the many advantages you will discover in Alcoa® Aluminum Forged Disc Wheels.

They weigh up to 50 pounds less per wheel than corresponding steel wheels—and this weight saving means less wear on chassis and tires.

Alcoa Aluminum Forged Disc Wheels dissipate heat fast—keeping tire temperature lower, allowing greater tire mileage. They resist corrosion, never need painting. In addition, tire changing is easier because there is no rust . . . rim surfaces remain smooth so tire beads loosen easily. For full information on this modern wheel, write: ALUMINUM COMPANY OF AMERICA, 1871-D Alcoa Bldg., Pittsburgh 19, Pennsylvania.

NEW LOW PRICE FOR "PRESTONE" ANTI-FREEZE

New price schedule for "Prestone" anti-freeze gives you this superior cooling-system protection at 20% lower cost!
See your supplier today!

NOW MORE THAN EVER YOUR BEST BUY!

- **Same high quality**
- **Same complete protection**
- **New low price**

"Prestone" anti-freeze gives you *complete* protection under all operating conditions—heavy-pulling, idling, parked. No foaming, no boil-away, no freeze-up with "Prestone" brand anti-freeze. It protects cooling systems all *ways*, all *winter!*

The terms "Prestone" and "Eveready" are registered trade-marks of Union Carbide and Carbon Corporation

Provincial Regs Probable for Canadian Truckers

DESPITE a recent ruling by the British Privy Council that the Canadian federal government has the right to regulate interprovincial and international highway traffic, it now appears likely that actual control of such traffic will be handled by the provinces. If such a step is taken, the provinces will, in effect, act as agents for the federal government, enforcing federally-approved regulations.

Announcing the federal government's stand on the situation, Minister of Transport Lionel Chevrier said:

"In our view it would not be in the public interest to have a divided jurisdiction, with the provincial boards controlling the traffic within the provinces, and a federal board controlling the traffic moving between the provinces or between a province and the United States. . . ."

Conference Set-up

HE ANNOUNCED that a conference would be arranged between federal and provincial representatives to determine the regulations.

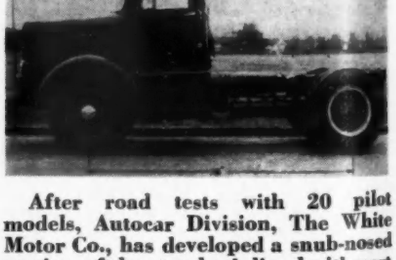
The decision has been hailed by the Canadian Trucking Associations as "wonderful news." Said CTA Executive Secretary John Magee:

"The Minister's statement . . . gives hope that control of all trucking, within and beyond provincial borders, will continue to be administered by provincial regulatory boards.

"As for truck operators who, on the strength of the Supreme Court and Privy Council judgments, have commenced trans-border operations with no authority, they appear to be in a most unenviable position as a result of the Minister's announcement. They have turned their backs on the provincial truck regulatory boards only to find that these boards may still control all trucking."

The Privy Council decision marked the end of a series of litigations which began in 1949, proceeding through provincial and federal courts. It also marked the last case in which an appeal could be carried beyond the Canadian Supreme Court.

Autocar's Shortened Tractor



After road tests with 20 pilot models, Autocar Division, The White Motor Co., has developed a snub-nosed version of the standard diesel with part of the engine projecting into the cab. The new Model No. DCU-75TN reduces the length to 106 in. Simultaneously, the wheel base is reduced to 131 in. One end of the diesel engine comes back through the cowl of the cab and is covered with an insulated metal casing, easily removable for maintenance. The new model comes equipped with diesel engines up to 200 hp.

overhauls on tough mountain run with STANOLUBE HD-M Motor Oil

REG. U. S. PAT. OFF.

• The big diesel unit shown above is one of a mountain-climbing fleet of trucks operated out of Denver, Colorado, by Armour and Company. Lubricated by STANOLUBE HD-M Motor Oil, it was recently taken in for overhaul after operating 157,000 miles over steep grades and under extreme weather and temperature conditions.

The liners had less than .005 inch wear and showed no signs of scoring. They were reinstalled for further service. There was very little bearing wear and no pitting. Rings were free. The engine, overall, was clean and in good condition.

Throughout the Midwest, in a wide variety of service, STANOLUBE HD-M has proved its ability to reduce fleet maintenance and improve operating efficiency. The Standard Oil automotive lubrication specialist serving your area will be glad to give you the facts. Phone him at your local Standard Oil office. Or, write: Standard Oil Company, 910 So. Michigan Ave., Chicago 80, Ill.

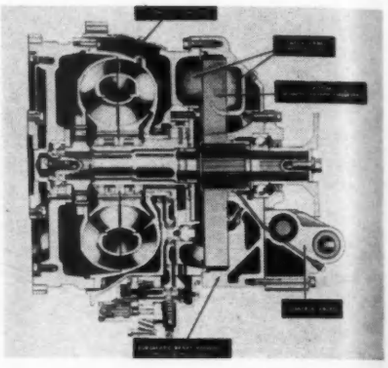
STANDARD OIL COMPANY *(Indiana)*

New Allison Torqmatic Brake Controls Down-Hill Truck Speed

A NEW braking device to provide positive control over down-hill speed of heavy-duty, off-highway trucks without wear on the conventional friction brakes has been announced by Allison Division, General Motors Corp., Indianapolis, Ind.

Known as the "Torqmatic" brake, the new system is an added package to the Allison "Torqmatic" converter now in general use with Allison "Torqmatic" transmissions in a number of heavy-duty trucks used in construction and mining industries.

It consists of three major parts: (1) a rotor assembled as an integral part of the converter output shaft, (2) stator vanes are cast into the housing which encloses the rotor, and (3) control valve.



As the truck moves down-hill, the operator opens a control valve which admits oil to the brake. The paddles of the rotor churn the oil against the stator vanes, placing a drag on the converter-transmission drive shaft. If more braking is required, more oil is admitted to the brake. Thus the operator has the truck under full control at all times and he need use the conventional friction brakes only to come to a complete stop or for "snubbing" on curves.

On the down-hill grade, the oil does the braking work and also absorbs heat generated by the braking action. The pumping action of the rotor circulates the oil to a heat exchanger where the heat is harmlessly dissipated. Source of the oil supply is the lubricating system for the converter and transmission so, after cooling, the oil is returned to the oil reservoir for re-use.

"Because it can move down-hill, under greater control and at higher speed, a truck equipped with 'Torqmatic' brake can make more trips per shift and return more income to the operator," says Allison. "In addition, maintenance and replacement of linings on the conventional brakes are greatly reduced."

The "Torqmatic" brake has been undergoing a number of field service tests at various locations since August, 1952, and recently has been put into commercial production.

Specifications

Series—400-600
Operating Oil—SAE 10 H.D.
Brake Oil Capacity (Mil-0-2104)
Maximum Oil—7½ gallons
Temperature—250 degrees F.
Weight Dry—597 lbs.
Flywheel Housing—SAE No. 1

Bendix-Eclipse

BRAKE BLOCKS AND LININGS

The Most Trusted Name in Braking ASSURES DEPENDABLE PERFORMANCE

When it comes to *braking*, the name "Bendix" is one of the most respected names in the trucking industry. That's because truck operators everywhere have long recognized the fact that Bendix brakes are the finest in their field for dependability and long, trouble-free life.

The same is true of Bendix-Eclipse* Brake Blocks and Linings. For the same engineering know-how that has made Bendix the byword in braking has made Bendix-Eclipse Brake Blocks and Linings tops for *dependable performance* in their field, too. Try them on your trucks—you'll be a steady Bendix-Eclipse booster from then on!

International Announces Light, Half-Ton Pickup, and Heavy, 145 hp Engine

A NEW low-cost half-ton pickup truck is being demonstrated by the International Harvester Co. The Model No. 100 has a 104 hp, 7.0 to 1 cr,

Model No. SD 220 engine. Performance characteristics include 21-ft turning radius.

The new model is presented in two 115-in. wheelbase models with 6½-ft pickup bodies: the R-100, with gross vehicle weight rating of 4200 lb, and the R-102, GW rating 4600 lb.

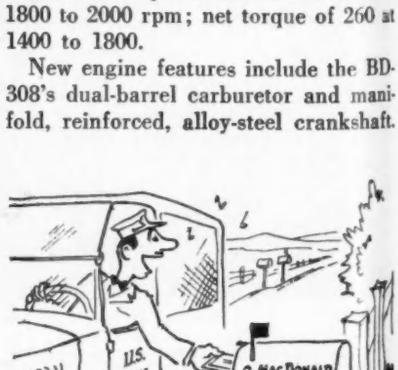
Road clearance is 7½ inches at the front axle, 8 inches at the rear axle.

New Heavy Engine

ALSO in production is a new high-torque engine, the 145-hp Black Diamond 308. The BD-308 is offered as optional equipment on International R-180-series models, the R-183 Schoolmaster model, the RF-170-series six-wheel models, and the RF-174 six-wheel Loadstar model.

The new engine, 12th in the line of International-built motor truck engines has 3 13/16-in. bore and 4½-in. stroke. Maximum torque of 273 is delivered at 1800 to 2000 rpm; net torque of 260 at 1400 to 1800.

New engine features include the BD-308's dual-barrel carburetor and manifold, reinforced, alloy-steel crankshaft.



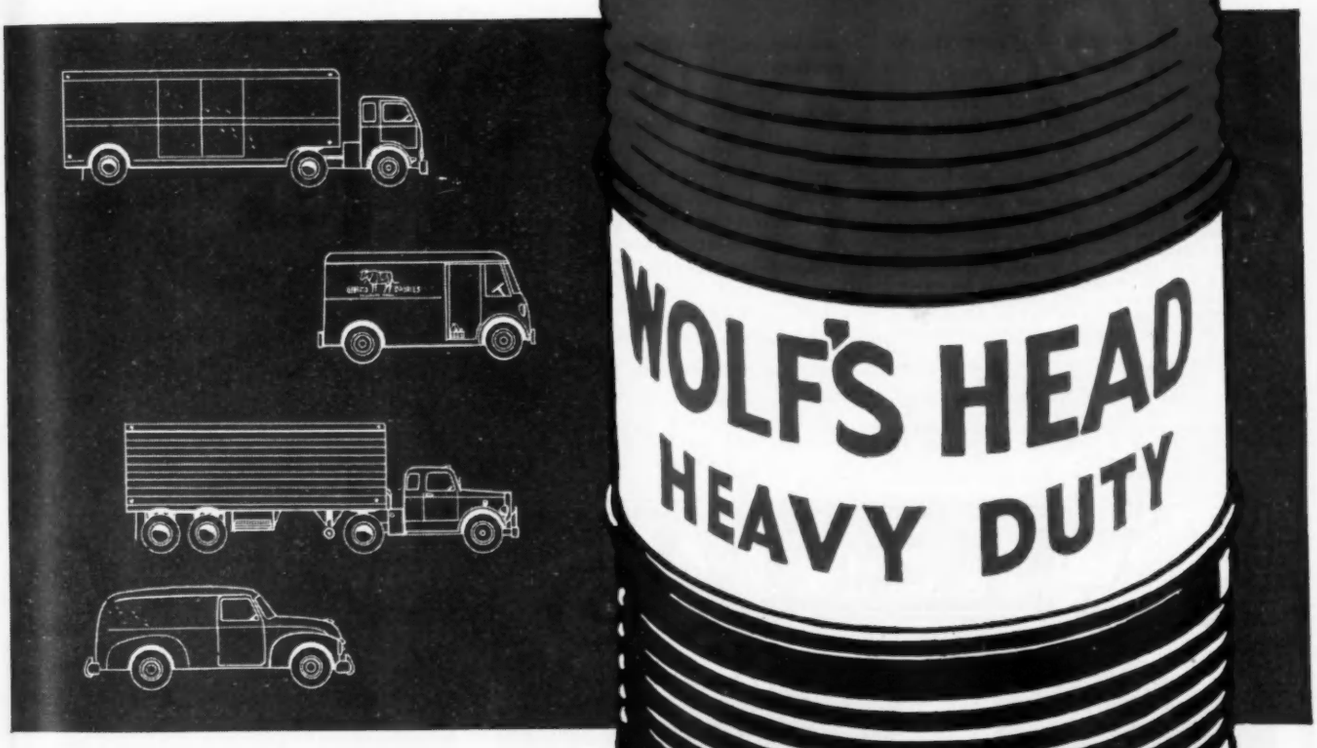
"E-I E-I O O O !"

Motor Oil...

a crude story and then some!

The basic job of *any* motor oil is to *lubricate* . . . to protect against friction and wear. The basic lubricating quality of motor oil depends upon the crude oil from which it is refined.

Nature has endowed Pennsylvania Crude with richer, better lubricating qualities than any other crude in the world. This is a known fact.



For 75 years, we have specialized in refining Pennsylvania Crude Oil. For vehicles in rugged fleet service, the ultimate product of this refining, is WOLF'S HEAD Heavy Duty Motor Oil, 100% Pure Pennsylvania. It provides superior film strength, thorough dispersancy, high detergency, and complete protection against corrosive acids, rusting and oxidation. *It cleans as it lubricates.* WOLF'S HEAD Heavy Duty Motor Oil exceeds the most exacting specifications for heavy duty oil.

Commercial Motor Vehicle

Nomenclature

The following nomenclature has been approved by the technical board of the Society of Automotive Engineers and will appear in the 1954 Handbook

Vehicle—A vehicle is any single conveyance on wheels.

Motor Vehicle—A motor vehicle is any vehicle self-propelled or drawn by mechanical power, designed for operation on the highways or natural terrain in the transportation of property or passengers.

Motor Vehicle Chassis—A motor vehicle chassis is the basic motor vehicle, including essential structure and mechanical parts; but exclusive of all appurtenances for the accommodation of operator, property or passengers and/or appliances or equipment related to other than locomotion and control.

Commercial Motor Vehicle—A commercial motor vehicle is a motor vehicle designed primarily for the transportation of property and/or more than 10 passengers in connection with business, industry, agriculture, public service or the exploitation of natural resources.

Motor Truck—A motor truck is a single self-propelled motor vehicle carrying its load on its own wheels and primarily designed for the transportation of property.

Truck Tractor—A truck tractor is a motor vehicle designed primarily for drawing truck trailers and constructed so as to carry part of the weight and load of a semitrailer.

4 x 2—A 4 x 2 motor vehicle is a two-axled motor vehicle equipped with four wheels, two of which are driving wheels.

4 x 4—A 4 x 4 motor vehicle is a two-axled motor vehicle equipped with four wheels, all of which are driving wheels.

6 x 2—A 6 x 2 motor vehicle is a three-axled motor vehicle equipped with six wheels, two of which are driving wheels.

6 x 4—A 6 x 4 motor vehicle is a three-axled motor vehicle equipped with six wheels, four of which are driving wheels.

6 x 6—A 6 x 6 motor vehicle is a three-axled motor vehicle equipped with six wheels, all of which are driving wheels.

Excerpt from rules of SAE Technical Board.

(c) Every report approved and issued by the Board shall carry the following statement:
"All technical reports, including standards approved and practices recommended, are advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. There is no agreement to adhere to any SAE Standard or SAE Recommended Practice, and no commitment to conform to or be guided by any technical report.
"In formulating and approving technical reports, the Board and its committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against liability for infringement of patents."

DRUM LIFE...MORE MILEAGE

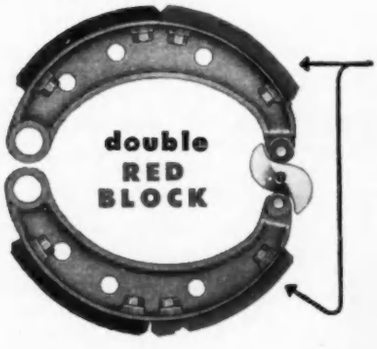
using WORLD BESTOS

RED BLOCK

For trucks and trailers operating under severe conditions, famous World Bestos RED BLOCK gives *safe stopping power* at temperatures as high as 1300 degrees F. It is not affected by glaze or water film . . . *eliminates all danger of brake fade!*

RED BLOCK actually gives drums a smooth finish that provides a perfect braking surface at all times. As a result, RED BLOCK gives safe, dependable brakes with considerably less brake pressure and less frequent application. Less severe braking reduces heat checking and *greatly prolongs drum life.* D Blocks used in the RED BLOCK Combination assure *more mileage* between relines.

Test famous RED BLOCK Combination on your toughest run! You'll be amazed by this superior brake performance.



NOW "DOUBLE RED BLOCK" COMBINATION gives EXTRA power to stop the most heavily loaded rigs in *abusive* service on or off the highway. More power to stop *plus* protection for drums and brake system! Ideal for excavators, earth movers, heavy hoists, etc.

Call your World Bestos Distributor for complete information about RED BLOCK . . . or write to WORLD BESTOS, New Castle, Indiana

WORLD BESTOS NEW CASTLE, INDIANA

Vehicle Nomenclature

Continued from Page 178

(Note: Motor vehicles designed with other combinations of driving and non-driving wheels are defined according to the same numerical scheme. Wheel and axle complement: Two wheels are considered the complement of any axle regardless of whether they may be single- or dual-tire equipped.)

Bogie—A bogie is an assembly of two rear axles with a common transverse trunnion or equivalent, one or both axles of which are driven.

Third Axle—A third axle is an additional non-driving axle placed immediately behind or in front of the rear driving axle of a truck or truck tractor.

Conventional Truck or Truck Tractor—A conventional motor truck or truck tractor is one with the driver's compartment and controls located at the rear of a hood-enclosed powerplant.

Cab Over Engine Truck or Truck Tractor—A COE (cab over engine) motor truck or truck tractor is one in which a substantial part of its engine is located under the cab.

Multi-stop Delivery Truck—A multi-stop delivery truck is one equipped with a fully enclosed body with driving compartment integral and especially designed for quick and easy ingress and egress.

Motor Bus—A motor bus is a single self-propelled motor vehicle primarily designed for the transportation of more than 10 passengers.

City Motor Bus—A city motor bus is a motor bus designed to accommodate the maximum number of passengers, both seated and standing in short ride frequent stop service and having quick-opening entrance and exit service doors.

Suburban Motor Bus—A suburban motor bus is a motor bus designed primarily for maximum passenger seated load and usually equipped with overhead parcel racks, front service door and raised seat floor with all transverse seats.

Intercity Motor Bus—An intercity motor bus is a motor bus designed for long-distance transportation of passengers with facilities for their baggage, usually both inside and outside the passenger space.

Cargo-Carrying Motor Bus — A cargo-carrying motor bus is a motor bus in which facilities are provided for cargo other than passengers' baggage.

Trolley Bus—A trolley bus is a motor bus electrically powered from overhead wires.

School Bus—A school bus is a motor bus primarily designed and/or equipped to carry school children.

Truck Trailer—A truck trailer is a commercial motor vehicle with or without auxiliary motive power designed to be drawn by a truck or truck tractor.

(a) **Single Axled Truck Trailer**—A single axled truck trailer is a truck trailer equipped with one axle and two wheels.

(b) **Two Axled Truck Trailer**—A two axled truck trailer is a truck trailer equipped with two axles and four wheels.

(c) **Three Axled Truck Trailer**—A three axled truck trailer is a truck trailer equipped with three axles and six wheels.

Semitrailer — A semitrailer is a truck trailer equipped with one or more axles and constructed so that a substantial part of its weight and load is carried by a truck tractor.

Full Trailer—A full trailer is a truck trailer constructed so that practically all of its weight and load rests upon its own wheels.

Dump Trailer—A dump trailer is a

(TURN TO PAGE 184, PLEASE)

Good buy - or goodbye INSULATION?

This unretouched photograph of a truck-trailer door (typical of the insulation throughout the entire reefer) shows what can happen to a "cheap" insulation after only several years of "service." It is an excellent reminder that **you pay for a good insulation, properly applied,** just once—but for a "cheap" insulation that fails, **you pay during the entire life of the unit.**

ULTRALITE WILL NEVER LET YOU DOWN! . . . for it's the truck-trailer insulation that won't sag, settle, pack down or disintegrate over the road and down the years. The only insulation of long, resilient glass fibers, Ultralite keeps its shape and its thermal efficiency *permanently*.

We can make such strong statements because Ultralite has been serving the trucking industry for more than 9 years — a sufficient period of time to see what an insulation will or won't do. Ultralite's ability to "take it" has been proved in "torture tests" in weathering-and-vibration laboratories. It has been proved in numerous test runs involving frozen and perishable cargoes. And then there are the actual experiences of fleet operators — like the one who recently reported that Ultralite was as good as new in a "reefer" that had traveled 700,000 miles.

This documentary proof—plus numerous timely tips on insulation and other factors that can cause cargo spoilage — is presented in a new booklet. We urge packers, shippers, fleet operators, body-builders — anyone concerned about cargo spoilage to write today for a free copy.

Vehicle Nomenclature

Continued from Page 182

truck trailer provided with a body which can be tilted or otherwise manipulated to discharge its load by gravity.

Low Bed Trailer—A low bed trailer is a truck trailer constructed to provide a low loading height and designed for the transportation of extremely heavy or bulky property.

Drop Frame Trailer—A drop frame trailer is a truck trailer designed for a body for the transportation of cargo with a minimum floor height, except for a raised forward section and rear wheel housings.

Tilt Bed Trailer—A tilt bed trailer is a truck trailer equipped with one or more axles centered so as to carry the major portion of the weight of the trailer and its load with a platform type body that may be manipulated to form a loading ramp.

Tank Trailer—A tank trailer is a truck trailer designed for the transportation of fluid commodities in bulk.

Automobile Transport Trailer—An automobile transport trailer is a truck trailer primarily designed for the transportation of other vehicles.

Pole Trailer—A pole trailer is a truck trailer without auxiliary motive power, designed to be drawn by a truck or truck tractor and attached by means of a reach or pole, or by being "boomed" or otherwise secured to the drawing motor vehicle and intended for transporting long or irregularly shaped loads such as poles, logs, pipes, or structural members which are capable generally of sustaining themselves as beams between supporting connections.

Tandem—A tandem is an assembly of two axles for the support of the rear of a truck trailer.

Trailer Converter Dolly—A trailer converter dolly is a trailer chassis consisting of an auxiliary axle assembly equipped with a lower fifth wheel half, drawbar, and other necessary parts designed to convert a semi-trailer to a full trailer.

Bodies

Platform Body is one having a floor without sides or roof.

(a) **Stake Body** is a platform body with readily removable stakes which may be tied together with chains, slats or panels.

Rack Body is a body with fixed slatted sides and headboard.

(a) **A Stock Rack** is a rack body with or without roof designed primarily for transportation of livestock.

Express Body is an open box body with or without flareboards.

(a) **Pick-up Body** is a small express body.

Canopy Body is an express body with fixed or removable uprights and roof which may be integral or separate from cab.

Screen Side Body is a canopy body with fixed roof and wire screen sides.

Brewers Body is a stake or express body, usually of heavier construction.

Camel Back or Dray Body is a body with floor curving down to the rear.

Ice Body is an express body designed primarily for the transportation of water ice.

Lumber Body is a platform body with transverse rollers designed primarily for the transportation of sawed lumber.

Pulp Wood Body is a body comprised of sills with or without headboard and with provision for end uprights designed primarily for the transportation of pulp wood.

Log Body is a body comprised of sill, bolsters with or without head-

(TURN TO PAGE 186, PLEASE)

Vehicle Nomenclature

Continued from Page 184

board and with provision for side uprights and designed primarily for the transportation of logs or other loads which may be boomed.

Glaziers Body is a body consisting of an A frame structure designed primarily for the transportation of large panes of glass.

Oil Field Body is a platform type body of heavy construction equipped with a rear end roller or bullnose adapted for winch loading and designed primarily for work in the oil fields.

Riggers Body is similar to an oil field body but designed primarily for rigging work.

Dump Body is a body of any type which can be tilted or otherwise manipulated to discharge its load by gravity.

(a) **Garbage and Refuse Body** is a dump body designed primarily for the collection of garbage and refuse. It is frequently equipped with mechanical means for distributing and packing the load within the body.

Hopper Body is a body of any type which is capable of discharging its load by gravity or mechanical power through means other than tilting.

Wrecker Body is a body designed primarily for transportation of equipment for salvaging disabled vehicles and equipped with means for hoisting and towing such vehicles.

Utilities Body is a body designed primarily for the transportation of equipment and personnel for the construction and repair of public utility facilities.

Panel Body is a fully enclosed body of limited capacity and includes driver's compartment.

(a) **Sedan Delivery Body** is a small panel body primarily designed for mounting on a passenger car chassis.

(b) **A Multi-Stop Body** is a fully enclosed body with driver's compartment integral and specifically designed for quick and easy ingress and egress.

Van Body is a fully enclosed body designed primarily for the transportation of miscellaneous freight.

(a) **Insulated Van** is a van body designed primarily for transportation of commodities at controlled temperatures. It may be provided with equipment for refrigeration or heating.

(b) **Ventilated Van** is a van body with provision for ventilation of load.

(c) **Furniture Van** is a van body designed primarily for transportation of furniture or household goods. Customarily, when truck mounted, it includes an integral driver's compartment.

Open Top Box Body is a body with closed sides and ends and a movable top.

Grain Body is a low side open box body primarily designed to transport dry fluid commodities in bulk.

Ice Cream Body is an insulated body designed primarily for the transportation of ice cream and frozen food.

Bottlers Body is a body designed primarily for the transportation of cased bottled beverages on open or closed shelves, A-frames or pallets.

Automobile Transporter Body is a body designed primarily for the transportation of other vehicles.

Armored Car Body (not military) is an enclosed cargo body with integral driver's compartment so constructed as to protect cargo and crew from overt attack.

Tank Body is a body designed for

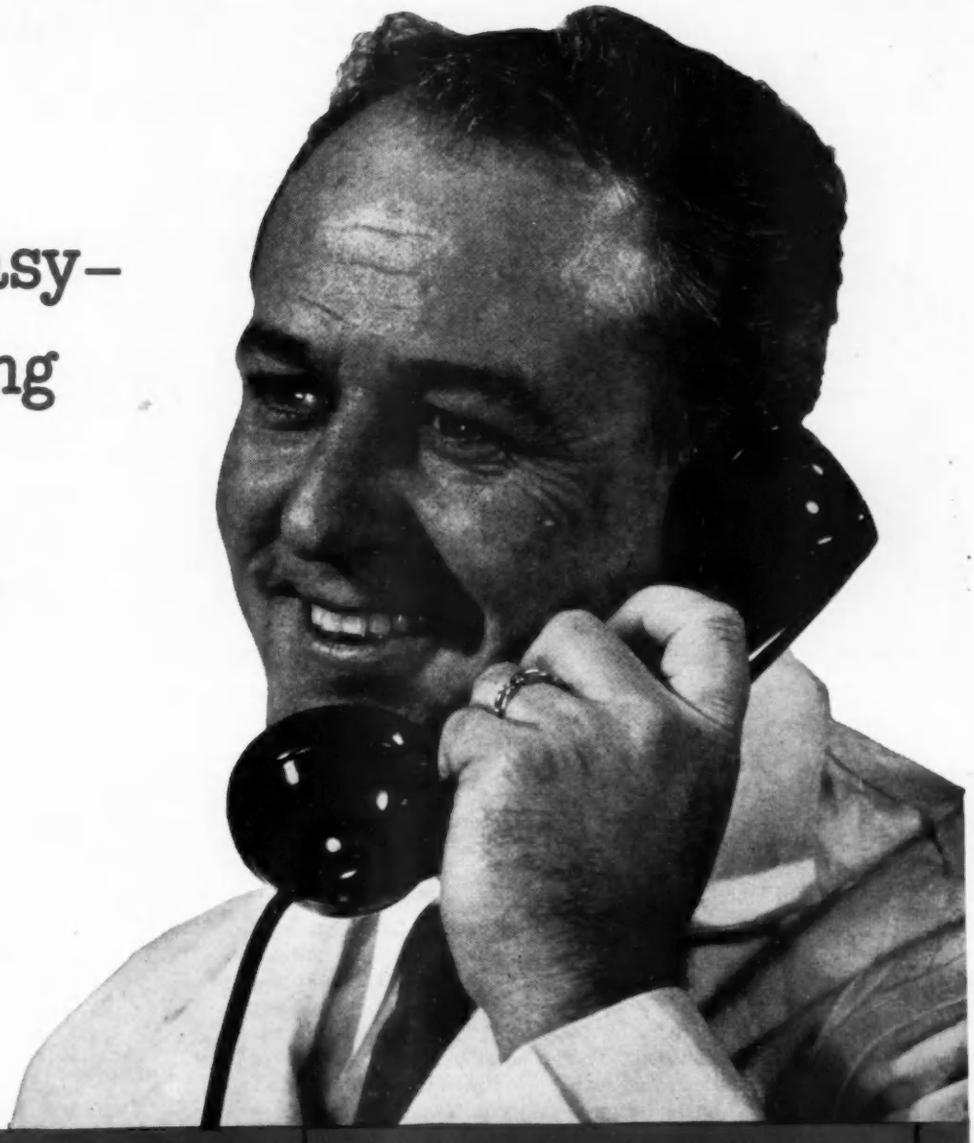
"That's easy—we're using that long-life Packard Cable now."



PACKARD IGNITION CABLE—*Long considered the standard of the automotive industry, Packard high-tension cable is original equipment on more cars, trucks, buses and tractors than any other cable. Packard* **FOUR-FORTY** *and Packard* **LAC-KARD** *ignition cables are designed to deliver balanced performance in every application. For dependability on the job, choose Packard!*

PACKARD LOW-TENSION CABLE—*As with Packard's two other products, Packard low-tension cable is used as original equipment on more cars, trucks, buses and tractors than cable of any other make. Packard's* **249 COMPOUND** *insulation, by every laboratory test and by the test of long, hard usage in the field, has exceptional resistance to heat, oil, chemicals and abrasion.*

the transportation of fluid commodities in bulk.

(a) **Street Flusher or Sprinkler Body** is a tank body equipped with means for spraying or directing a stream of water on to the road surface.

Concrete Mixer or Agitator Body is a body designed and equipped to mix or agitate concrete in transit.

Bituminous Material Distributor is an insulated tank body provided with means for distributing hot bituminous material under pressure. It is usually equipped with means for heating the material.

Horse Van is a fully enclosed body designed primarily for the transportation of valuable horses and their appurtenances.

Bus Body is a body designed primarily for the transportation of more than ten persons.

Hall-Scott's 200 hp, 1300 lb Engine

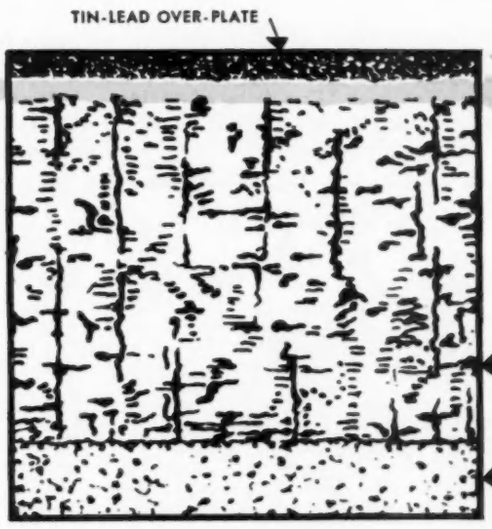
A COMPACT, light-weight engine for use in a wide range of trucks has been introduced by Hall-Scott Division, ACF-Brille Motors Co., Berkeley, Cal. The new Model No. 590 develops more than 200 hp, weighs less than 1300 lb and has a length less than 50 in.

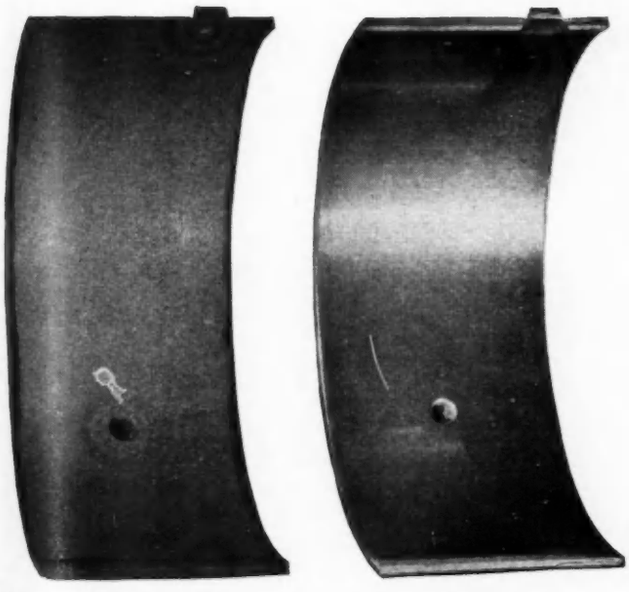
The new engine will be available for gasoline or liquid petroleum gas fuels. Option of dual down-draft carburetors for maximum power output or single up-draft carburetion for maximum economy is available.

Unique unit assembly of crankcase, cylinder block and head permits quick replacement of the block and pistons without removing the crankcase from the vehicle. Long studs in the crankcase pass completely through the cylinder block and head, holding the engine rigid but permitting rapid disassembly and ready replacement of single units.

The Model No. 590 is of square design, 5-in. bore and 5-in. stroke. It has oversize bearings and oversize oil and water pump capacity, full flow lubricating filter, cast aluminum alloy pistons and specially forged steel crankshaft. (See page 104, this issue, for complete specifications.)

THE NICKEL THAT'S WORTH DOLLARS





Thompson "CL" heavy-duty bearing — The "Ugly Duckling Bearing" that is running up sensational mileage records.

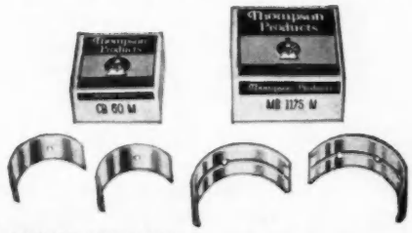
Conventional bearing

THE SECRET of the longer life of Thompson "CL" heavy-duty bearings? It's in that nickel barrier *(note the above yellow arrow)* which prevents diffusion of tin-lead plating into copper-lead base metal. This is an exclusive patented feature.

This *nickel* barrier gives the tin-lead plating a 3½-to-1 mileage advantage over babbitt in the engines you service. And that's worth DOLLARS . . . not only to the satisfied owner of the engine but also to the man who installs Thompson "CL" Heavy-duty Bearings.

In the world of motors . . . car, truck, bus and tractor . . . Thompson is the leader, not only in the Original Equipment field, but also in "Original Equipment" Replacement parts.

Your Thompson Jobber's catalogs contain hundreds of "CL" bearing listings. Get "CL" Bearings from your Jobber for the heavy-duty engines you service.



THOMPSON ENGINE BEARINGS for replacement use are exact duplicates of those used by car, truck, bus and tractor builders for Original Equipment. These bearings include: Thin-layer (tin or lead base) bimetal; Conventional babbitt (tin or lead base) bimetal, steel back; Copper-lead bimetal, steel back; "CL" heavy-duty tri-metal (tin-lead, nickel and copper-lead base) steel back.

Selected Fleet Films for Training

Continued from Page 144

Slow Motion Study of Normal Combustion, Preignition and Knock in a Spark Ignition Engine—33 min—Silent, advanced technical film on gasoline engine combustion. Free loan—47.

A Study of Combustion in a Spark Ignition Engine—17 min—Shorter version of the above film. Also silent. Free loan—47.

Where Mileage Begins—19 min—Animated film describing gasoline engine operation, what happens when gears are shifted. Functions of parts are explained as an engine is assembled. Free loan—30.

Diesel Engines

The ABC of the Diesel Engine—20 min—Animated, color film on diesel engine fundamentals. Follow-up film to "The ABC of Internal Combustion." Free loan—30.

Diesel Story—20 min—Thorough explanation of the principle of the four-stroke diesel engine. Free loan—62.

Diesel . . . The Modern Power—21 min—Both 4 and 2-cycle engines are discussed. Engine is assembled and function of each part explained. Free loan—30, 72.

International Diesel Power—20 min—Explains features and shows operation of the International diesel engine. Free loan—35.

Slow Motion Study of Fuel Injection and Combustion in a Diesel Engine—33 min—Silent, advanced technical film on diesel engine fuel injection and combustion. Free loan—47.

Gas Turbine Engines

Boeing Model 502 Gas Turbine Engine—17 min—Describes Boeing's gas turbine engine. Also covers truck operation with the engine. Free loan—13.

Tornado in a Box—28 min—Shows construction, principle, advantages and limitations of larger gas turbine engines. Free loan—4.

Ignition, Electrical System

Ignition Engineered—35 min—Describes function and operation of the ignition system. Free loan—22.

Ignition and Spark Plugs—19 min—Illustrates cleaning and testing of spark plugs. Shows relationship of spark plug to ignition system. Free loan—16.

Johnnie Plug Check—30 min—Color film on procedure for checking spark plugs. Free loan—22.

Story of a Spark Plug—33 min—Shows how to install spark plugs and describes causes of faulty performance. Also includes spark plug manufacture. Free loan—16, 72.

Story of the Storage Battery—21 min—Describes principle, operation and use of the storage battery. Also covers battery manufacture. Free loan—72.

Brakes

Air Brakes, Operation and Maintenance, Part 1—24 min—Covers truck and tractor air brakes. Free loan—12.

Air Brakes, Operation and Maintenance, Part 2—21 min—Covers trailer air brakes. Free loan—12.

(TURN TO PAGE 194, PLEASE)

Selected Fleet Films

Continued from Page 192

Safest Thing on Wheels—50 min—Shows how to reline and adjust all popular types of automobile brakes and how to service hydraulic brake systems. Rent—70.

Short Stops—10 min—Describes operation of automobile hydraulic brakes and how to use them effectively. Free loan—25.

Bearings

Longer Engine Bearing Life—26 min—Color film describing engine, bearing maintenance. Free loan—26.

Service Procedure for Ball Bearings — 20 min — Instructional film showing how to remove, service and install ball bearings in vehicles. Free loan—30.

Lubrication

Basic Principles of Lubrication—25 min—Explains basic theory and function of lubrication in the engine using U. S. Army trucks as examples. Shows how it reduces friction, cools moving parts, keeps power in the cylinder and prevents contamination and deterioration. Free loan—30.

It's Mighty Cheap Insurance—30 min—Color film on the reasons for and the advantages of regular oil change. Shows how engine is lubricated. Free loan—69.

Lubrication — 30 min — Describes theory of friction and application of lubricants in a vehicle. Free loan—72.

Oil Films in Action—18 min—Technical film in color for engineers showing effect of oil film in bearing life. Free loan—30.

The Why of Automobile Lubrication—24 min—Color film on why lubrication is necessary. Free loan—72.

General Maintenance

The ABC of Hand Tools, Part 1—18 min—Animated, color film shows how to handle such tools as hammers, screwdrivers, pliers and wrenches. Free loan—30.

The ABC of Hand Tools, Part 2—15 min—Animated, color film shows how to handle such tools as files, saws, chisels, planes, drills and punches. Free loan—30.

School Bus Operation, Part 1, Bus Care and Maintenance—13 min—Outlines points to be checked in daily and weekly maintenance of school buses. Free loan—25. Rent—33, 39, 50, 68.

Curve .Control—8 min—Explains operation of various types of steering mechanisms. Rent—38.

For Safety's Sake—15 min—Demonstrates safe use of power-driven, hand tools. Rent—53, 61.

FWD Story—25 min—Color film showing principle and operation of Four Wheel Drive trucks. Free loan—27.

A Good Valve Job Pays—23 min—Describes complete procedure for doing a valve job. Free loan—24.

Grinding Cutter Bits—20 min—Color film shows correct way to grind tools for different lathe operations. Free loan—63.

The Grinding Wheel, Its Care and Use—17 min—Color film shows care and precautions necessary for efficient use of grinding wheels. Gives correct dressing procedures. Free loan—54.

Grinding Wheel Safety—20 min—Color film covers principal causes of grinding wheel breakage. Discusses selection of grinding wheels. Free loan—54.

Making the Most of the Spray Painting Method—45 min—Illustrates the four basic principles of spray paint-

(TURN TO PAGE 197, PLEASE)

Selected Fleet Films

Continued from Page 194

ing—proper equipment, control factors for high quality results, painting technique and equipment care, cleaning and maintenance. Free loan—19.

The Metalworking Lathe—20 min—Color film on basic metalworking lathe operation. Function of each part is described. Free loan—63.

Plain Turning—20 min—Color film illustrates all operations necessary in machining a shaft. Free loan—63.

Professor Otto Trouble—16 min—Animated film on automobile cooling system troubles and proper maintenance practices. Free loan—51.

Pulling for Profits—20 min—Demonstrates basic fundamentals of the NoSPIN differential. Shows how it operates. Free loan—18.

School Bus Safety—18 min—Discusses maintenance and operational procedures for school buses. Includes material on transporting school children safely. Rent—32, 74.

That's the Torque Converter—22 min—Detailed showing of principles of torque conversion. Free loan—4.

The Truck that Tips Its Cab to Service—30 min—Describes how the White tilt cab operates. Free loan—76.

Use and Care of Hacksaws—18 min—Shows proper use and care of hacksaws, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Use and Care of Hammers—11 min—Shows proper use and care of hammers, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Use and Care of Chisels—12 min—Shows proper use and care of chisels, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Use and Care of Pliers and Screwdrivers—17 min—Shows proper use and care of pliers and screwdrivers, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Use and Care of Punches, Drifts and Bars—14 min—Shows proper use and care of punches, drifts and bars, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Use and Care of Wrenches—20 min—Shows proper use and care of wrenches, and accident hazards to be avoided in their use. Free loan—60. Rent—53.

Welding

Advanced Welding Techniques—10 min—Shows selection of electrodes for AC welding. Demonstrates practical aspects of welding techniques. Free loan—75.

Advantages of AC Welding—19 min—Easy to understand presentations in color of principles and applications of AC welding of iron and steel. Free loan—75.

Arc Welding Stainless Steel—20 min—Explains technique for electric arc welding of stainless steel. Free loan—2.

The Inside of Arc Welding—6 parts, each 10 min—Film No. AS-2481 covers arc welding fundamentals; the other five show fillet and groove welding in flat position—Film No. AS-2482, horizontal position—Film No. AS-2483, vertical position—Film No. AS-2485, overhead position—Film No. AS-2486, and Film No. AS-2484 describes use of larger electrodes. In color. Free loan—29.

Prevention and Control of Distortion in Arc Welding—20 min—Explains how to overcome metal distor-

(TURN TO PAGE 198, PLEASE)

Selected Fleet Films

Continued from Page 197

tion in arc welding. Free loan—42.

Resistance Welding of Stainless Steel—22 min—Color film describes spot, seam, projection and butt resistance welding of stainless steel. Free loan—2.

Safety for Welders—7 min—Illustrates protective clothing and equipment for welders to prevent eye injuries and metal fume poisoning. Rent—37, 57.

A Story of Arc Welding—24 min—Color film on various uses, techniques and theory of arc welding. Many automotive scenes are included. Free loan—72.

This Is Resistance Welding—25 min—Color film describing resistance welding techniques. Ask for Film No. AS-2583. Free loan—29.

Welding, the Safe Way—18 min—Training film for new welders illustrates safe working conditions for most welding operations. Rent—53.

Handling Aluminum

Arc Welding Aluminum—10 min—Explains techniques for metal, carbon and hydrogen arc welding of aluminum. Free loan—5, 72.

How to Form Aluminum, General Sheet Metal Practice—20 min—Bending, hammering, beading, flanging, edging and otherwise forming sheet aluminum, both manually and mechanically, is covered in this film dealing largely with industrial procedures. Free loan—5.

How to Machine Aluminum—32 min—Outlines practices employed in machining aluminum with hand and machine tools. Free loan—5, 72.

How to Rivet Aluminum—27 min—Explains procedures and techniques in riveting aluminum. Selection of various types of rivets is also included. Free loan—72.

How to Weld Aluminum, Resistance Welding—12 min—Explains technique of resistance welding aluminum. Free loan—5, 72.

How to Weld Aluminum, Torch Welding—17 min—Explains technique of torch welding aluminum. Free loan—5.

New Horizons in Aluminum Brazing—22 min—Color film illustrates advantages of and how to join aluminum parts by brazing. Free loan—5.

SAFETY FILMS

THIS list of safety films will provide effective instruction for your drivers, mechanics and other employees in (1) how to prevent traffic and shop accidents, and (2) in what to do when an accident happens. It is a well known fact that preventing accidents means reduced insurance costs, less employee and vehicle time lost, too. These films will help you make these savings at low cost. The films in the list have been especially selected for their direct application to bus and truck fleet employee training. Additional information on more general traffic safety films is available from the editors. Films in this section are arranged as follows:

1. Driver Training, General
2. Driver Training, Bus
3. Driver Training, Truck
4. Fire Prevention and Control
5. First Aid
6. Shop and Dock Safety

(TURN TO PAGE 200, PLEASE)

Eaton SODIUM COOLED VALVES save money for Truck Owners

Eaton Sodium Cooled Valves operate at considerably lower temperatures than do conventional valves and, therefore, last several times longer.

In general, maintenance of Eaton Sodium Cooled Valves in heavy duty truck engines is scheduled only at time of major engine overhaul. No in-between trips to the shop are necessary for servicing the valves. Engine output is maintained at high levels over long mileages. In many millions of miles of heavy-duty operation, Eaton Sodium Cooled truck valves have proved their ability to keep trucks on the road and out of the shop.

EATON MANUFACTURING COMPANY
CLEVELAND, OHIO
VALVE DIVISION: 9771 FRENCH ROAD • DETROIT 13, MICHIGAN

PRODUCTS: Sodium Cooled, Poppet, and Free Valves • Tappets • Hydraulic Valve Lifters • Valve Seat Inserts • Jet Engine Parts • Rotor Pumps • Motor Truck Axles • Permanent Mold Gray Iron Castings • Heater-Defroster Units • Snap Rings Springtites • Spring Washers • Cold Drawn Steel • Stampings • Leaf and Coil Springs • Dynamatic Drives, Brakes, Dynamometers

Driver Training, General

The Champ Becomes Deaf and Blind—10 min—Color film for professional drivers shows why the ability to concentrate on the job of driving, shutting out all distractions, is a big part of professional driving skill. Rent—53.

A Day in Court—29 min—Story of a day in traffic court. Shows how the accidents that come up for hearing happened and what could have been done ot prevent them. Free loan—45.

Let's Count the Cost—16 min—Shows how much accidents cost, illustrating the effect of rising prices and wages on accident claims and how careless driving has increased the number of these claims. Free loan—1.

Live and Let Live—10 min—Color film using three-dimensional, scale-model, animation to demonstrate 10 leading causes of driving accidents. Free loan—1.

Night and Bad Weather Driving—11 min—Basic film on safe driving at night and in bad weather. Free loan—25.

Ninety Day Flash—10 min—Color film shows how small driving errors made by professional drivers lead to faulty driving habits and inevitably into accidents. Rent—53.

Problems of City Driving—11 min—Basic film on recognition of hazards in driving, in heavy traffic. Free loan—25, 73.

Safety Is No Accident—13 min—Color film illustrating the theme that highways would be safer if all drivers were like professional truck drivers. Describes the automobile cameras for highway observation used by Markel Service, Inc. Free loan—44.

Short Stops—10 min—Describes operation of automobile hydraulic brakes and how to use them effectively. Free loan—25.

Skill Is Your Business—10 min—Color film shows what it takes to maintain professional driving skill day after day, year after year and always have it on tap to meet those unexpected situations which often involve unskilled drivers in accidents. Rent—53.

Smooth Operation—16 min—Describes the hazards of the distractions and delays of city driving. Shows how when truck drivers fight traffic, they make driving tougher on themselves. Rent—53.

Speed and Reflexes—11 min—Dem-

(TURN TO PAGE 204, PLEASE)

Selected Fleet Films

Continued from Page 200

onstrates effect of speed in relation to physical laws of motion, human reflexes and reaction time. Affects of fatigue on the driver are shown. Free loan—73. Rent—58.

Take a Look at the Odds—10 min—Color film tells why the right attitude towards safety by professional drivers is the best insurance against accidents. Shows how the odds are always in favor of the driver who plays it safe. Rent—53.

You Bet Your Life—10 min—Driver training film on road signs, road markings and hand signals. Rent—58.

Watch Your Handicap—10 min—Color film designed to show professional drivers handicaps to safe driving resulting from lack of sleep, improper food habits, irregular health habits. Rent—53.

With Care—11 min—Shows professional, safe truck driving practices. Rent—20, 40.

Driver Training, Bus

Bus Driver—10 min—Description of the hazards a professional bus driver meets on his daily run. A guide to safe, professional bus driving. Rent—67, 68.

Gentlemen of the Highway—10 min—Illustrates qualifications, training, equipment and everyday routine of the intercity bus driver in attaining safe operation. Free loan—1.

Hustle and Bustle—10 min—Shows safe bus operation illustrating checking the vehicle, stopping, starting, following distances, safe speeds, turns, pedestrians, courtesy and reporting of hazards. Free loan—73.

It's a Big Job—25 min—Basic training film for urban transit bus operators. Rent—53.

The Operator and His Job—13 min—Basic film on the job of the urban transit bus operator. Free loan—7. Rent—33, 68.

The Operator and His Passengers—19 min—Demonstrates relationship of the urban transit bus operator and his passengers. Free loan—7.

The Operator and Safety—19 min—Shows techniques of safe operation for urban transit bus operators. Free loan—7. Rent—40, 53, 68.

Priceless Cargo—20 min—Demonstrates school bus accident prevention and proper planning of school bus routes. Free loan—66.

School Bus Operation, Part 2, Driving Hazards—Safety—14 min—Shows safe driving habits and practices in school bus operation. Free loan—25. Rent—33, 39, 40, 55, 68.

School Bus Safety—18 min—Discusses safety factors involved in transporting school children. Includes maintenance and operational procedures. Rent—32, 74.

Driver Training, Truck

Caution at the Crossroads—12 min—Instructional film for truck drivers on avoiding intersectional accidents. Free loan—25, 31, 36, 41, 43, 48, 73. Rent—53.

Champions at the Wheel—17 min—Color film shows safe driving practices for semi-trailer drivers. Free loan—1.

Danger in Reverse—18 min—Basic film on backing commercial motor vehicles. Free loan—25, 31, 36, 41, 43, 48, 73. Rent—53.

Dark Daze—10 min—Illustrates effect of proper and improper eating and sleeping habits on night drivers of commercial vehicles. Free loan—31, 41, 48, 73. Rent—53.

Hell Wouldn't Have Him—30 min—Film for truck drivers showing re-

(TURN TO PAGE 206, PLEASE)

Your N·A·P·A Jobber is a good man to know!

the genuine quality of these nationally advertised brands is doubly assured by the makers' integrity and the NAPA Seal.

For genuine quality and coverage, the group of lines your NAPA Jobber stocks cannot be surpassed. Many of these NAPA lines are widely used as original equipment. In every case, the lines which bear the NAPA Seal are recognized by automotive engineers as meeting the highest standards of quality. And combined with this uniform and dependable quality, your NAPA Jobber is equipped to offer you extraordinary *service.* He can replenish his stock overnight—or obtain the seldom-needed parts no jobber can afford to stock, in record time . . . from his nearby NAPA Warehouse. There's no waiting "for shipment from the factory."

This unbeatable NAPA combination of quality, coverage and service is yours in any purchase you make from your NAPA Jobber. You can buy with confidence, because he has at his command all the facilities, resources and experience of a great national organization devoted to the purpose of serving your needs well. Wouldn't it pay you to concentrate *your* purchases of parts and supplies with *him*?

National Automotive Parts Association, Detroit, in behalf of the thousands of independent

N·A·P·A JOBBERS

who supply fleet operators and the automotive repair trade from coast-to-coast with these*—and many other—nationally advertised brands of quality automotive parts and supplies.

*Famous names in Automotive products distributed by NAPA

Selected Fleet Films

sults of carelessness on highways. Free loan—8, 14, 73.

Knights on the Highway—10 min—Commercial driver training film on night driving safety. Rent—20, 32, 37, 40, 73.

Look What You're Missing—27 min—Color film illustrating driving tip-offs used by truck drivers to prevent accidents. Basic film on defensive driving. Free loan—41.

Looking for Trouble—10 min—Commercial driving training film on making a mechanical check on a truck to keep it safe and serviceable. Free loan—31, 41, 43, 48, 73. Rent—53.

Mind Your Manners—10 min—Brief lessons in advantages of driver courtesy for commercial vehicle drivers. Free loan—31, 41, 48, 73. Rent—53.

Pipeline on Wheels—26 min—Color film describing safe operation and construction of tank trucks. Free loan—21.

A Professional Portrait—22 min—Shows how the professional truck driver operates as compared with the amateur. Free loan—8, 30, 52, 73.

Split-Second Survival—10 min—Shows how a professional driver can prevent an imminent accident by reacting properly to the situation. Shows truck drivers what to do in such emergencies. Free loan—31, 41, 48, 73. Rent—53.

Tailgating—11 min—Describes danger of following too closely on the highway. Free loan—8.

They Drive in Safety—25 min—Color film on how to attain accident-free truck driving. Free distribution limited to 11 western states. Free loan—46. Rent—53.

Too Close for Comfort—8 min—Shows how tailgating causes accidents in truck driving. Free loan—25, 31, 36, 41, 43, 48, 73. Rent—53.

Too Fast for Conditions—9 min—Shows why legal speed limits are often too fast for safety in truck driving. Free loan—25, 31, 36, 41, 43, 48, 73. Rent—53.

The Truck and the Driver—10 min—Illustrates professional, safe truck driving practices. Discusses truck maintenance. Rent—53.

You're Driving 90 Horses—26 min—Color film demonstrating defensive driving techniques for light truck operators. Free loan—11.

What Happened?—10 min—Commercial driver training film on how to gather facts at the scene of an accident. Free loan—31, 41, 43, 48, 73. Rent—53.

Wrong Side—Suicide—10 min—Commercial driver training film on the hazards of crossing the centerline. Free loan—25, 31, 41, 43, 48, 73. Rent—53.

Fire Prevention and Control

Cause for Alarm—Shows how to control fires, how to turn in an alarm, how to meet an emergency situation and how various types of extinguishers are used. Rent—53.

Control of Flammable Liquids—18 min—Manufacturer's film showing methods of handling, storing and conserving flammable liquids. Free loan—59.

Fight That Fire—10 min—Color film shows techniques of fighting small fires with common types of hand extinguishers including soda ash, carbon tetrachloride, foam and pump. Free loan—23, 50.

Fire and How to Fight It—23 min—Color film shows how different classes of fires start, various types of portable extinguishers, and how to use them. Free loan—50.

(TURN TO PAGE 208, PLEASE)

Selected Fleet Films

Continued from Page 206

Propane Fires — 25 min — Silent, colorfilm showing large scale tests on fires involving propane, gasoline and benzol under high pressure. Free loan —9.

Stop Fires—Save Jobs—18 min—Tells how fires start, how to report them and how to recognize fire hazards. Free loan—50.

Stop the Fire Thief—13 min—Illustrates recognition of fire hazards in handling and storage of flammable liquids, electrical equipment, welding, open heating equipment, smoking, and dirt and trash. Rent—53.

The Torch—10 min—Color, cartoon film on how carelessness causes fires. Free loan—50.

First Aid

First Steps in First Aid—30 min—Basic training film for beginners in first aid. Similar to "Help Wanted." Free loan—72.

Handle With Care—14 min—Color film demonstrating basic techniques of first aid. Free loan—1.

Help Wanted—30 min—Basic training film for beginners in first aid. Similar to "First Steps in First Aid." Free loan—72.

Minutes That Count, Part 1—30 min—Color film for training in first aid techniques. Covers arterial bleeding and dressing of cuts and open wounds. Free loan—65.

Minutes That Count—Part 2—30 min—Color film for training in first aid techniques. Covers dislocations, fractures, infections and transportation of wounded. Free loan—65.

Seconds Count—8 min—Describes Nielsen method of artificial respiration which has been adopted by the American Red Cross. Includes instruction on giving stimulants and protecting from shock. Free loan—1.

Shop and Dock Safety

The ABC of Hand Tools, Part 1—18 min—Animated, color film shows safe handling of such tools as hammers, screwdrivers, pliers and wrenches. Free loan—30.

The ABC of Hand Tools, Part 2—15 min—Animated, color film shows safe handling of such tools as files, saws, chisels, planes, drills and punches. Free loan—30.

For Safety's Sake—15 min—Demonstrates safe use of power driven, hand tools. Rent—53, 61.

Freight Handling Safety—11 min—Shows freight loading hazards, how to handle dock plates, how to lift, carry and pile, and how to use hand trucks. Free loan—73. Rent—53.

The Grinding Wheel, Its Care and Use—17 min—Color film shows safety in use and operation of grinding wheels. Free loan—54.

Grinding Wheel Safety—20 min—Color film covers grinding wheel safety, principal causes of wheel breakage and need for proper guards. Free loan—54.

Partners in Production—17 min—Color film on industrial and shop safety. Shows why safety is needed, methods of safe lifting and need for keeping tools in good condition. Free loan—1.

Safety for Welders—7 min—Illustrates protective clothing and equipment for welders to prevent eye injuries and metal fume poisoning. Free loan—73. Rent—37, 57.

Safety Saves—30 min—Illustrates the "do's and don'ts" of safe driving fork lifts, tow tractors and hand trucks. Also shows safe handling of cargo. Free loan—17.

More Up Grade Traction

CHOOSE 4-WHEEL DRIVE

OSKOSH TRACTORS

...FOR MINE, QUARRY AND OFF-HIGHWAY HAULING

CUT HAULING COSTS . . .

Divide tire wear and driving stress over

2 DRIVING AXLES

Oshkosh's tremendous power, plus two driving axles, provide sure-footed, all-wheel traction to keep loads moving despite grades made slippery by rain or snow.

All-wheel drive, with patented automatic locking center differential, eliminates tire-scuffing on turns.

With all-wheel drive, hauling stress and tire wear is distributed over two driving axles—cuts tire replacement costs.

With "power steer" and spring-suspended driver's seat, high operator efficiency is maintained by Oshkosh's ease of handling under all driving conditions.

- Models available from 22,000 to 90,000 lbs. G.V.W.
- Available with gasoline, diesel or LP engines.
- Service stations located at convenient points throughout the United States and Canada.
- For full details, write for Bulletin No. 354.

Use and Care of Chisels—12 min—Shows accident hazards to be avoided with proper use and care of chisels. Free loan—60. Rent—53.

Use and Care of Hacksaws—18 min—Shows accident hazards to be avoided with proper use and care of hacksaws. Free loan—60. Rent—53.

Use and Care of Hammers—11 min—Shows accident hazards to be avoided with proper use and care of hammers. Free loan—60. Rent—53.

Use and Care of Pliers and Screwdrivers—17 min—Shows accident hazards to be avoided with proper use and care of pliers and screwdrivers. Free loan—60. Rent—53.

Use and Care of Punches, Drifts and Bars—14 min—Shows accident hazards to be avoided with proper use and care of punches, drifts and bars. Free loan—60. Rent—53.

Use and Care of Wrenches—20 min—Shows accident hazards to be avoided with proper use and care of wrenches. Free loan—60. Rent—53.

Welding, the Safe Way—18 min—Training film for new welders illustrates safe working conditions for most welding operations. Rent—53.

PUBLIC RELATIONS FILMS

BETTER public relations for the highway transportation industry and more adequate highways—two top subjects for bus and truck fleet operators—are covered in this film list. It is designed to help you take advantage of every opportunity to show the public the importance of bus and truck transportation and the value of better roads in today's economy. Show them at your local Rotary, Kiwanis, Lions, etc.—benefit your community and yourself. Films in this section are divided as follows:

1. Highway Transportation
2. Adequate Roads

Highway Transportation

Gentlemen of the Highway—10 min—Describes the training, the qualifications, the vehicles and the daily routine of a bus driver. Free loan—1.

Haulaways West—25 min—Describes truck transportation and safe truck driving in the delivery of four

Only COLE-HERSEE *offers a* VOLTAGE CONTROL UNIT

THAT *DOES NOT* DIMINISH BRILLIANCE OF STOP & TAIL LIGHTS WHEN 12 VOLT TRACTOR IS HOOKED UP TO A 12 VOLT TRAILER

NO. 30008 VOLTAGE CONTROL UNIT reduces 12 volt tractor system to 6 volt trailer operation with manual, variable control for required number of marker lights.

For a 12 volt system, plug is inserted directly in 12 volt socket — no adjustment of pointer knob is necessary. Stop lamps and tail lamps do not dim when 12 volt tractor is hooked up to a 12 volt trailer.

Assures positive electrical contact, minimum loss — maximum candle power in all lights on trailers.

This is not a rheostat — it's a multiple, heavy duty fixed contact switch that controls known units of resistance.

Theft-proof & tamper-proof construction. Extra heavy duty tabs with ½" hole to accommodate padlock.

SOCKETS TAKE STANDARD 6 POLE PLUG

Manufactured by Cole-Hersee Company, the leading manufacturer of truck and trailer electrical equipment.
This unit embodies the technical and quality characteristics for which Cole-Hersee is famous.

THE INSIDE STORY OF THE COLE-HERSEE VOLTAGE CONTROL UNIT

Famous COLE-HERSEE QUALITY CONSTRUCTION THROUGHOUT

- Wiring & connectors are insulated from resistance units by a high heat-resistant glass insulating material.
- Silver inlaid contacts and contactors.
- Special construction assures heat dissipation.
- Rugged mechanical and electrical design.
- Genuine Nichrome wire resistors encased in ceramic.
- Resistors are welded to terminals.

Height – 8" — Width – 6¼" — Depth – 2¼"
Cable Length – Four Feet
Weight – 5 lb. Including Cable

new automobiles from a Detroit plant to a new car dealer in Los Angeles, Cal. Free loan—49.

Horizons Unlimited — 17 min — graphically shows the importance of truck transportation in our everyday living. Includes scenes of many different types of trucks. Free loan—8, 25, 30, 52, 76.

Look What You're Missing—27 min —Color film illustrating driving tip-offs used by truck drivers to prevent accidents. Basic film on defensive driving. Free loan—41.

The McGurk Way—26 min—Presents history of highway transportation from colonial days to the present. An interesting outline of state legislation affecting highway transportation is included. Free loan—28.

Oil—The Invisible Traveler—20 min —Shows how oil and oil products are transported from the well to the consumer, including many illustrations of tank trucks at work. Free loan—62.

Pipeline on Wheels—26 min—Shows how the modern tank truck is a strong, carefully engineered vehicle for safe transportation of gasoline and other liquids. Free loan—21.

A Professional Portrait—22 min—Shows how professional truck drivers "keep 'em rolling" safely, skillfully, considerately, and how their work brings us the things we need and use. Free loan—8, 30, 52.

The Road Ahead—15 min—Stresses the importance of truck transportation with many excellent scenes of trucks at work. Free loan—8, 76.

Safety Is No Accident—13 min—Color film illustrating the theme that highways would be safer if all drivers were like professional truck drivers. Describes the automobile cameras for highway observation used by Markel Service, Inc. Free loan—44.

Singing Wheels—23 min—Portrays the part trucks play in building, distributing, and serving. A particularly dramatic sequence shows what would happen if trucks disappeared. Free loan—8.

Teamwork in Transit—21 min—Tells the story of the trucking industry's importance to our everyday life and traces the history of highway transportation. It emphasizes the important part played by mechanics and drivers. Free loan—12.

They Drive in Safety—25 min—Color film on how to attain accident-free truck driving. Free distribution limited to 11 western states. Free loan—46. Rent—53.

To New Horizons—17 min—Depicts the development of transportation in the post war era. Free loan—76.

Trucks That Serve Our City—14 min—Shows how trucks serve the modern city in respect to communication, food supply, sanitation, construction and as the necessary link between railroads and the consumers. Rent—71.

Wheels of Progress—24 min—Color film explaining how long haul motor freight operates including its history, background and highway safety. Shows how truck transportation serves the nation. Free loan—56.

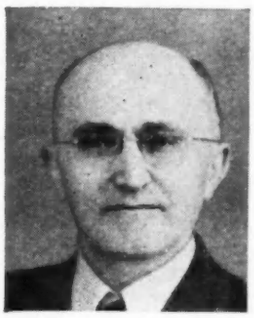
With Care—11 min—A professional truck driver tells a private motorist about how fleet operators promote safety on the highway. Includes illustrations of safe truck driving. Free loan—73. Rent—20, 40.

Adequate Roads

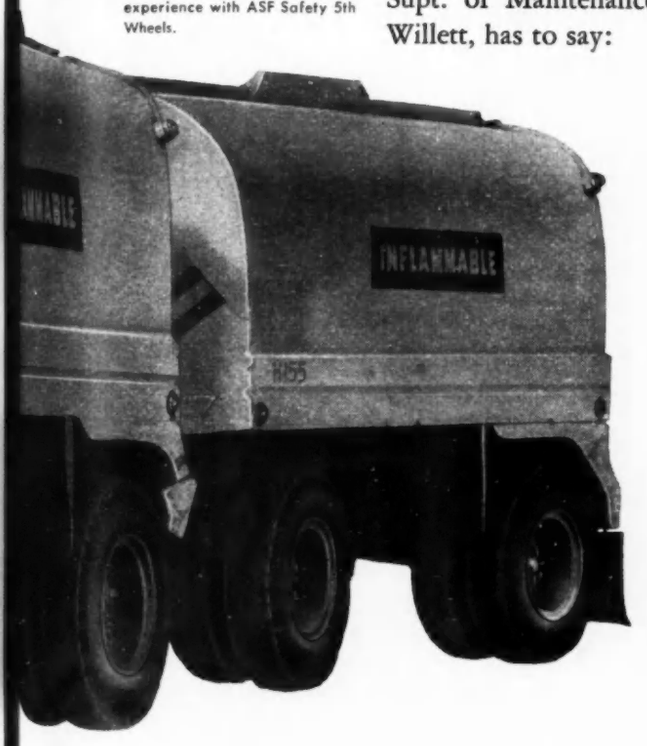
Better and Safer Highways—7 min —Promotes public understanding of Project: Adequate Roads—Explains

(TURN TO PAGE 216, PLEASE)

When one look at a 5th wheel shows you that it's obviously built for the toughest service, the natural reaction during a trial is to "throw the book" at it. That's how Willett Company—one of the country's leading local truckers—found that *they* get the performance out of the ASF Safety 5th Wheel *we* build into it. Read what Phil Young, Supt. of Maintenance at Willett, has to say:



Phil Young, Supt. of Maintenance for Willett, describes his firsthand experience with ASF Safety 5th Wheels.



"We knew a good 5th wheel when we saw one, but to make sure, we gave it our toughest test. For a year, the ASF 5th Wheel was used for hauling a double-bottom, 8000-gal. tanker in local service. It certainly came through, without costing us a nickel for maintenance other than routine greasing.

"The rubber buffer on the jaw solved our 5th wheel problems. ASF 5th Wheels are now standard equipment on all Willett tractors."

"*The rubber buffer on the jaw*"—that's one of the basic reasons why ASF wheels so clearly out-perform ordinary wheels. *ASF jaws stay tight.* Ask yourself what a virtual elimination of slack and backlash means to you in terms of longer jaw life, less wear on king-pins, fewer repairs, smaller spare-parts inventory. There's only one answer: a shock-absorbing jaw that protects itself—and the rest of the rig—*is a jaw that saves money.*

There's a way to prove it! Try just *one* ASF Wheel. Keep an eye on it. "Throw the book" at it if you wish. Like Willett, after that one trial chances are you won't be satisfied with a substitute! See your nearest ASF distributor or write: American Steel Foundries, Hammond Division, Hammond, Indiana.

Make an investment in safety... with

ASF

safety 5th wheels

ASF Safety 5th Wheels

A 3000-pound "compression-grip" saves your maintenance dollars...

COUPLING—as the king-pin enters the jaws, the jaws are forced back against the exclusive ASF rubber buffer block, building up compression.

COMPRESSING—3000 pounds are built up before the lock clears the rear jaw, allowing it to snap to locked position.

LOCKED—and the jaws *remain* under compression. The grip is like a vise; eliminates the slack and backlash that can cost you money in added 5th wheel and king-pin wear.

A quick glance tells you the lock is locked...

LOCKED—as quickly shown by the lever and safety latch—which can *only be in these positions* when the jaws are truly locked.

UNLOCKING—with an easy twist of the wrist. Simply move the safety latch up, and pull the lever forward.

UNLOCKED—ready for uncoupling; parts in lockset position. *Handle can only move back to locked position when jaws are locked in next coupling operation!*

Selected Fleet Films

Continued from Page 212

why our present roads are inadequate and what should be done to remedy the situation. Free loan—10.

Highways Ahead—29 min—Color film tracing the history of our roads from Indian paths to superhighways. Free loan—15.

Let's Get Out of the Muddle—19 min—Shows why our roads are inadequate, how rapidly increasing vehicle registrations and old, worn out roads combine to halt our progress. Shows why and what kind of better roads are needed. Free loan—6, 30.

The Longest Mile—30 min—Color film showing how the general public can join forces with county, state and federal highway officials to obtain better roads. Distribution limited to states east of the Mississippi River. Free loan—3.

Pennsylvania's Highway Story—22 min—Color film showing the importance of adequate highways to the state's economy. The story applies to any state. Free loan—6.

The Road Ahead—74 min—Color film in three reels—shows the operation of a state highway department, administrative as well as operational problems and their solution. Designed for public showing, it shows what goes on in building adequate highways. Free loan—6.

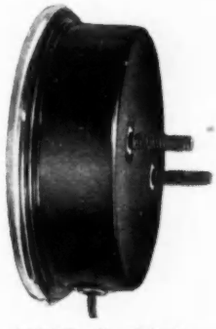
Thin and Simple

2 WAY · CLASS A DIRECTIONAL SIGNAL

A COMPLETE SERIES OF DIRECTION SIGNALS NOW AVAILABLE

551—Single-faced for fender mounting.



551-SF—Semi-flush mounting.

551-LR—Single-faced with L-bracket for rear mounting.

551-FR—Full flush-mount.

3758—SELF-CANCELLING Turn Signal Switch

Never fail, lifetime switch assembly. Positive cam action. Rugged one-piece metal backing plate, fits all steering posts. Included with 550 Series.

Griffin's new Class A, double-faced model shoots an amber signal forward and a red signal to the rear *with one bulb and a single set of wires!*

It's thin—barely two inches deep—because the Stimsonite-Lucite lens *requires no reflector.* Color is stable and the lens is optically accurate. All-steel black enameled housing with stainless steel trim rings makes it both sturdy and smart.

The 550 Series signal kit includes lamps, fuse assembly, current interrupter, wire and self-cancelling switch. A complete line of signal lamps (shown above) for any type of installation are now available through your Griffin wholesaler.

New Chevrolet Trucks

deliver hour-saving power that saves you money, too!

New Chevrolet trucks bring you great new engine power in every model—from light-duty pickups to heavy-duty tractors. And this new power means important savings of both time and money on the job!

YOU SAVE TIME WITH GREATER SAFETY

That's because new Chevrolet trucks permit you to maintain faster schedules *without* driving at higher maximum road speeds. Thanks to greatly increased acceleration and hill-climbing ability, you can save time where it counts. Instead of trying to make up for lost time, you actually cut down the time lost at traffic lights and on steep grades.

YOU SAVE PLENTY ON OPERATING COSTS

New Chevrolet trucks bring you high-compression power that saves you money every mile. All three great engines—the "Thriftmaster 235," the "Loadmaster 235" and the "Jobmaster 261"* deliver greater horsepower *plus* increased operating economy. In addition, the mighty "Jobmaster 261" engine reduces the need for operating in low gears on heavy-duty jobs. As a result, you shift gears less . . . save more on gas.

Now's a good time to see your Chevrolet dealer about a time-saving, money-saving truck. . . . Chevrolet Division of General Motors, Detroit 2, Michigan.

CHEVROLET

MOST TRUSTWORTHY TRUCKS ON ANY JOB!

CHEVROLET ADVANCE-DESIGN TRUCK FEATURES

THREE GREAT ENGINES—The new "Jobmaster 261" engine* for extra heavy hauling. The "Thriftmaster 235" or "Loadmaster 235" for light-, medium- and heavy-duty hauling. **NEW TRUCK HYDRA-MATIC TRANSMISSION***—offered on ½-, ¾- and 1-ton models. Heavy-Duty **SYNCHRO-MESH TRANSMISSION**—for fast, smooth shifting. **DIAPHRAGM SPRING CLUTCH**—improved-action engagement. **HYPOID REAR AXLE**—for longer life on all models. **TORQUE-ACTION BRAKES**—on all wheels on light- and medium-duty models. **TWIN-ACTION REAR WHEEL BRAKES**—on heavy-duty models. **DUAL-SHOE PARKING BRAKE**—greater holding ability on heavy-duty models. **NEW RIDE CONTROL SEAT***—eliminates backrubbing. **NEW, LARGER UNIT-DESIGNED PICKUP AND PLATFORM STAKE BODIES**—give increased load space. **COMFORTMASTER CAB**—offers greater comfort, convenience and safety. **PANORAMIC WINDSHIELD**—for increased driver vision. **WIDE-BASE WHEELS**—for increased tire mileage. **BALL-GEAR STEERING**—easier, safer handling. **ADVANCE-DESIGN STYLING**—rugged, handsome appearance.

**Optional at extra cost. Ride Control Seat is available on all cab models, "Jobmaster 261" engine on 2-ton models, truck Hydra-Matic transmission on ½-, ¾- and 1-ton models.*

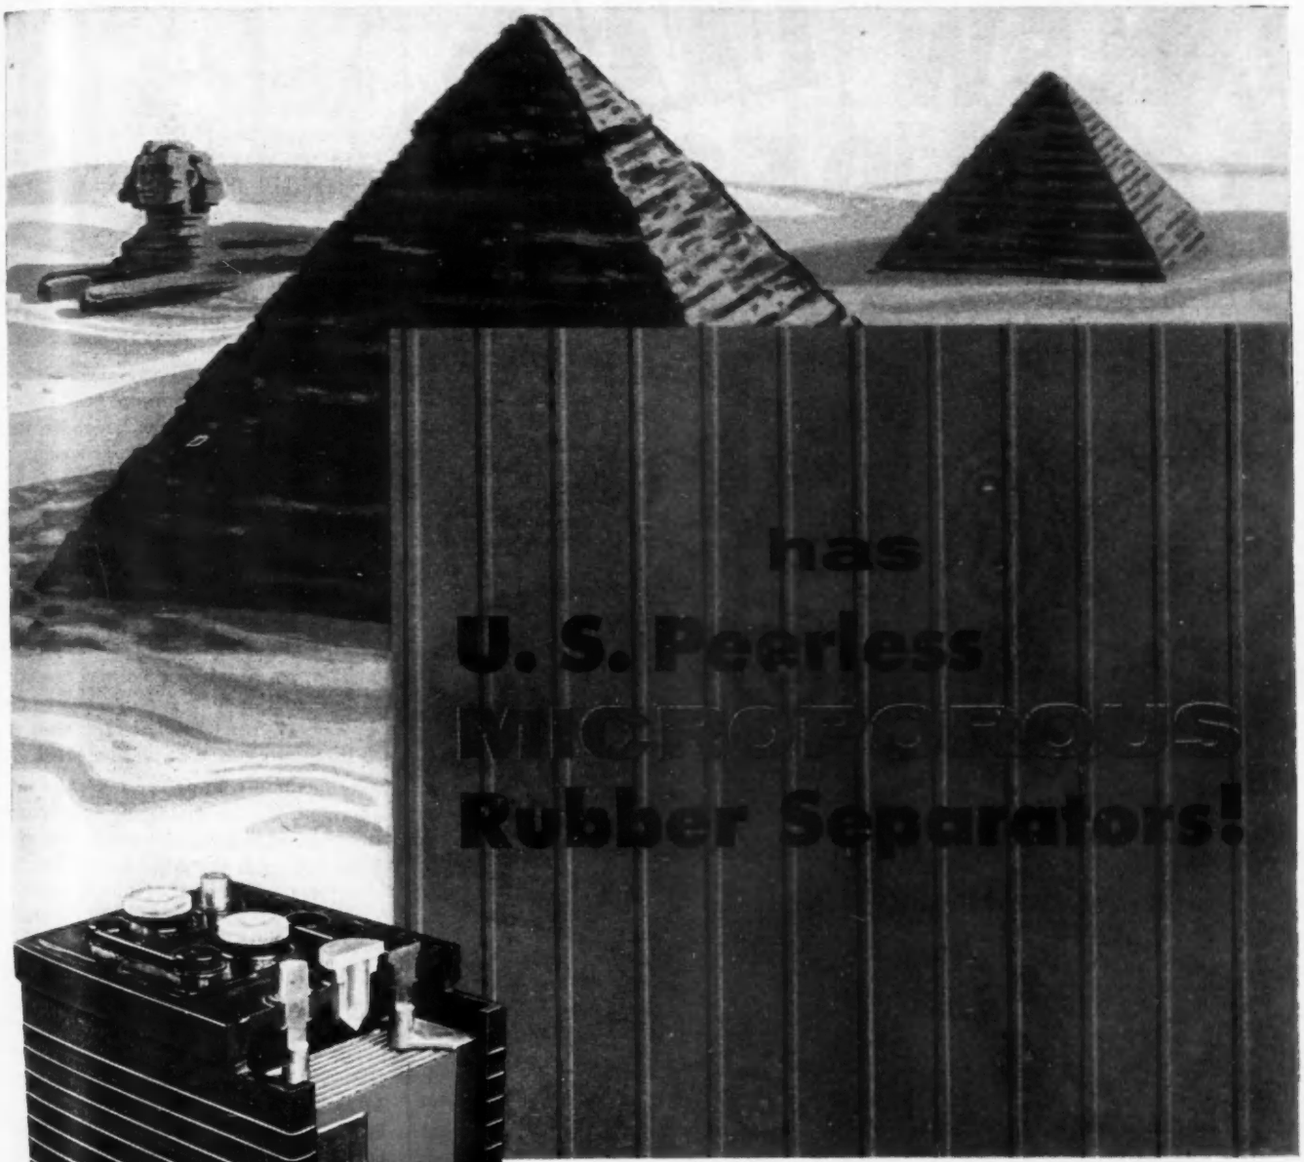
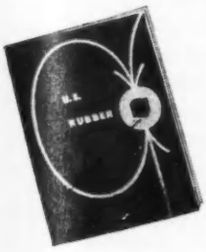
"I used to go crazy trying to answer 'til I found out it was only a diesel!"

The battery that ENDURES





Write to address below for free copy of informative booklet on the high-performance, low-upkeep U. S. Peerless Rubber Battery Separators.

Separators are a critical factor in battery life. U. S. Peerless Microporous Rubber Separators actually *outlast the plates.* Peerless is unaffected by overcharging, battery acid, heat, or plate pressure and will not get mushy or soft in service. Not even a broken plate can cut through them. They are unbeatable in prolonging battery life in rugged duty.

What about performance? U. S. Peerless Microporous Rubber Separators gain in electrical resistance when the temperature is high and reduce the effects of overcharge, a common cause of battery failure. *When the temperature is zero,* they permit 20% faster cranking speed, 10% more starting power. That's because of the high porosity of Peerless.

Do what other cost-minded fleet owners are doing—specify U. S. Peerless, and get more for your battery dollar.

UNITED STATES RUBBER COMPANY

US RUBBER

Report Indicates More Lube, Less Oil with Liqui-Moly

RESULTS of laboratory tests on Automotive Liqui-Moly have been announced by Moly Motor Products Corp., New York City. The tests, conducted for the company by Motor Vehicle Research, Inc., South Lee, N. H., were run during October, November and December last year.

Seven identical Briggs-Stratton 2-hp engines were set up and operated for a period of two months. All of the engines were lubricated with recognized brands of premium grade motor oil. In addition, three of these were plated with Liqui-Moly, according to the directions shown on the can.

After 117 hours of continuous running, these results were reported:

1. The three engines plated with Liqui-Moly had consumed up to 56 per cent less motor oil than the other four engines.
2. The per engine gasoline consumption of the four engines not treated was 17 per cent greater than the three engines that were treated.

Immediately after these results were obtained, all the motor oil was drained from the seven engines until they were bone dry. All the engines were started and restarted until they finally seized—required 90 lb torque to turn crankshaft one revolution.

The four engines which had contained motor oil alone reached that limit in an average time of 19 min each. The three engines which had been previously plated with Liqui-Moly ran for an average of 12 hr, 40 min before they reached the limit. One of the treated engines ran for more than 17 hr before it reached the 90 lb limit.

These tests were not conducted to prove that vehicles can run without oil but to demonstrate that a Liqui-Moly plating will provide protection to an engine against seizure in case the motor oil should accidentally be lost. Other features claimed for Liqui-Moly include reduced engine friction, lower engine operating temperatures and oil and gas consumption.

Automotive Liqui-Moly consists principally of molybdenum disulfide, submicronized and suspended in a fluid vehicle compatible with motor oils. Because of the peculiar chemical structure of the MoS_2 molecule, Liqui-Moly "plates" itself to the metal bearing surfaces to prevent metal-to-metal contact, reducing friction, wear and seizures.

ELIMINATE *dangerous and costly*

brake failures!

Graham-White AUTOMATIC DRAIN VALVE

WATER, OIL, SCALE, AND SLUDGE are dangerous enemies of air pressure systems and can cause costly brake failures, damaged diaphrams and governors, or frozen and broken air lines. All are eliminated with the Graham-White Automatic Drain Valve.

The Graham-White Drain Valve is the first *really complete answer* to a problem that has plagued the truck and bus industry for years . . . human neglect or error in the manual draining of air reservoirs and lines. Now, the Graham-White Valve gives you *automatic* draining — in regular and frequent cycles—that keeps pressure-operated equipment BONE-DRY!

The Graham-White Automatic Drain Valve is built to last. It is built to operate under the most extreme circumstances. Users report over a hundred thousand miles of bus operation with NO MECHANICAL DIFFICULTY — NO FAILURE OF THE VALVE! Even in sub-zero weather, the Graham-White Automatic Drain Valve keeps right on operating. It never freezes, never gums-up, NEVER STOPS PROVIDING YOUR PRESSURE SYSTEM WITH ASSURED PROTECTION.

Equip all your air reservoirs with the Graham-White Automatic Drain Valve that is "PERFECTLY SIMPLE, SIMPLY PERFECT."

Actual size valve, cut-a-way to show working parts.

The Graham-White Automatic Drain Valve is simple and easy to install, fool-proof in operation. Its solid construction (bronze, brass, Buna N rubber, and stainless steel) guarantees years of trouble-free performance. More and more outstanding truck and bus operators, railroads, and users of stationary compressed air installations are using the Graham-White Automatic Drain Valve as standard equipment.

Diesel Engine Troubleshooting

2-CYCLE DIESEL

1. Uneven running

Faulty injector timing
Insufficient fuel supply
Improper governor adjustment
One or more cylinders cutting out

2. Engine stalling

Too low idle setting
Low coolant temperature
Too sudden application of load at low speeds
One or more cylinders cutting out
Hunting governor

3. Lack of power

a. Engine adjustment
Governor out of adjustment
Improper rack setting
Improper injector timing
Improper valve lash

b. Insufficient fuel
Air leaks
Flow obstruction
Defective fuel pump

c. Insufficient air
Clogged air cleaners
Obstructed blower intake
Low compression
Excessive exhaust back pressure

4. Insufficient fuel

a. Air leaks
Low fuel supply
Loose connections, cracked lines
Damaged primary fuel filter gasket
Faulty injector tip assembly

b. Flow obstruction
Restricted primary, secondary, injector fuel filters
Foreign material in lines

c. Defective fuel pump
Relief valve fails to seat
Worn vanes or housing
Defective fuel pump drive

5. Detonation

Defective injectors
Leaking fuel connections in head
Crankcase dilution (fuel leaks)

6. High oil consumption

a. External leakage
At gaskets or oil seals
At crankcase breather
At air box

b. Internal leakage
Blower oil seals
Cylinder block end plate

c. Cylinder oil control
Defective piston rings
Loose piston pin retainer
Scored liners or pistons
Worn crankshaft thrust washers
Misaligned piston and rod
Worn camshaft bearings
Worn main or con rod bearings

7. Low oil pressure

a. Lube oil
Low oil level
Improper oil viscosity
Fuel dilution

b. Pressure gage
Faulty gage
Gage line obstruction
Plugged orifice

c. Circulation
Clogged strainer
Clogged cooler
Cooler by-pass valve not functioning

(TURN TO PAGE 231, PLEASE)

Diesel Troubleshooting

Continued from Page 228

Defective pressure regulator valve
Worn main bearings
Missing gallery or crankshaft plugs

d. Oil pump
Clogged intake screen
Defective relief valve
Air leak in pump inlet system
Worn pump
Flange leak at pressure side

8. Low oil pressure
Low crankcase oil level
Dilution of crankcase oil
Improper grade, type of lubricant
Worn main bearings, shaft journals
Sticking relief valve in oil pump

9. Excessive crankcase pressure
a. Cylinder blowby due to
Leaking head gasket
Defective piston or liner
Worn or broken piston ring

b. Restricted breather

c. Air from blower or air box due to
Excessive exhaust back pressure
Damaged blower to block gasket
Damaged engine end plate gasket

10. Cold weather starting
a. Low starting rpm
High oil viscosity
Infrequent oil changes
Low battery output
Defective starting motor
Inoperative air heater

b. No spark due to
Poor or shorted connections
Coil or points defective
Cracked porcelain
No fuel due to
Defective pump
Plugged spray nozzle or filter
Dirt in pump valves
Temperature less than 10 deg above pour point of fuel

c. Pump and switch not operated while engine is cranked

11. Abnormal engine temperatures
a. (Insufficient heat transfer)
Restricted radiator
Scale or deposits in system
Loose fan belt
Improper fan shrouding

b. (Circulation)
Lost coolant level
Collapsed, disintegrated hoses
Defective thermostat
Loose pump impellor
Combustion gases in coolant
Air in cooling system

12. Smoking exhaust
a. (Insufficient combustion) Black or Gray
Excessive exhaust back pressure
Restricted air inlet due to—
Clogged liner ports
Clogged air cleaners
Emergency stop not completely open
Restricted screen
Clogged engine air ducts
b. (Excess fuel or improper distribution)
Improper injector rack setting
Late injector timing
Faulty injectors
(TURN TO PAGE 232, PLEASE)

Continued from Page 231

4-CYCLE DIESEL

Lugging engine
Blown air box cover plate gasket
Improper grade of fuel

c. (Misfiring cylinders) white
Faulty injectors
Low compression
Low cetane fuel
Cylinder cutting out
Worn piston rings or cylinders
Oil leaks into air box or blower

1. Engine fails to start

Poor compression
No fuel in tank
Fuel does not reach cylinders
Plugged air cleaner
Too slow cranking speed
Inoperative governor
Air lock in fuel or injector pump
Restriction between filter and pump
Worn transfer pump vanes
Safety switch closed
Improper injection timing
Gummed or corroded nozzles
Condensation in fuel lines

2. Engine stops

Insufficient fuel reaching injector pump
Piston seizure
Safety shut down due to overheating
Improper governor adjustment
Excessive overloads (stall)

3. Engine misses

Unsuitable grade of fuel
Water in fuel on lines
Poor compression
Clogged air cleaner
Sticking valves
Leaking valves
Insufficient fuel supply to cylinders
Obstruction in air intake
Air logged fuel lines
Improper injector timing
Blocked delivery valves
Damaged injector plungers
Clogged injector nozzles

4. Engine surges

Inoperative governor or improper adjustment
Damaged control rods or cables
Sticking control rack
Insufficient fuel supply from primary system
Air entrainment in pump or lines
Improper pump timing

5. Loss of power

Poor compression
Insufficient fuel supply to cylinders
Incorrect fuel injection timing
Clogged air cleaner
Improper governor action
Overheating engine
Unsuitable fuel oil
Restricted exhaust
Restricted nozzles
Leaking intake exhaust valves
Low fuel pressure
Worn fuel pump

6. Detonation

Engine not warmed up
Early timing of fuel injection
Leaking injection nozzles
Poor grade of fuel
Carbonized head or pistons
Hot spot in cylinder head
Engine overheating

(TURN TO PAGE 235, PLEASE)

Diesel Troubleshooting

Continued from Page 232

Excessive valve clearance
Wrong type valve used
Weak or broken valve springs
Worn rings or pistons

7. Low compression

Sticking rings
Burned valves
Incorrect tappet clearance
Worn valve guides
Weak or broken valve springs
Incorrect valve timing
Leaking cylinder head gasket
Worn pistons and rings

8. Overheating

Restricted radiator passages
Clogged radiator (external)
Inoperative radiator shutter
Low water
Bent or broken fan blades
Late fuel injection timing
Incorrect valve timing
Dirty air cleaner
Poor quality, insufficient or dirty oil
Dragging brakes

9. Insufficient fuel

Plugged fuel tank cap
Air leaks in suction side between pump and tank
Primary or secondary filter clogged
Inoperative fuel supply pump
Air in lines between supply pump and injection pump
Stuck injection pump control tack rod
Inoperative delivery valve (injection pump)
Sticking injection pump valve plunger
Improper injection pump setting
Governor stop rod in closed position
Inoperative governor
Leaking high pressure lines
Clogged injection nozzle
Excessive opening pressure (injection nozzle)
Water or dirt in fuel

"Sure, I'm the driver. Now, stop staring and put some gas in the tank!"

10. Low fuel pressure gage reading

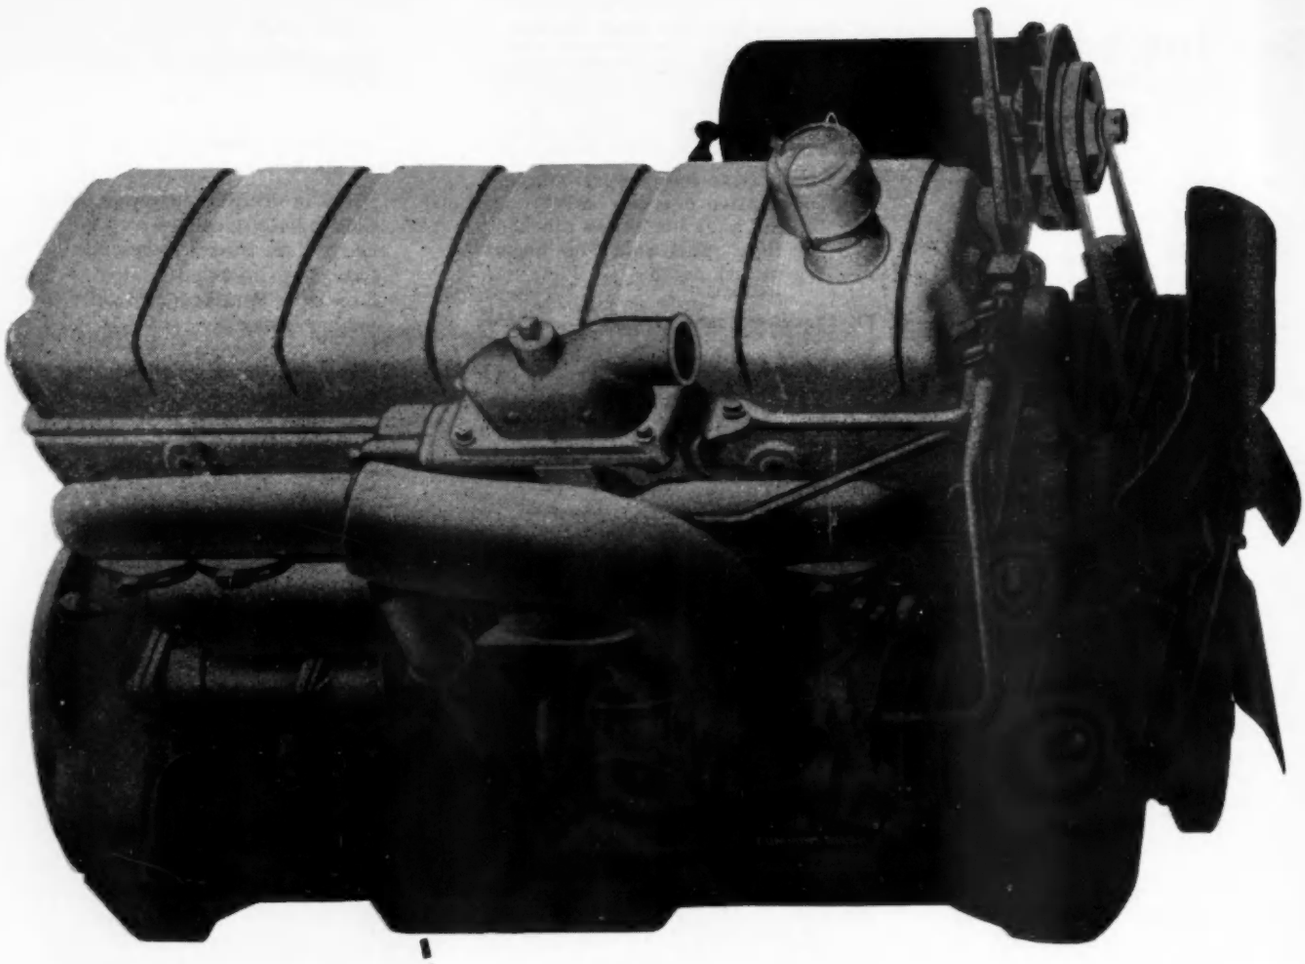
No fuel in tank
Plugged fuel tank cap vent
Air leaks in suction lines
Clogged primary or secondary filters
Inoperative fuel supply pump
Inoperative overflow valve
Line to gage broken or pinched
Too light or too thin fuel grade
Worn fuel pump

11. Excessive exhaust smoke — blue white

Engine cold
Poor compression
Unsuitable fuel
Water or air in fuel
Excessive lubrication on cylinder walls

12. Excessive exhaust smoke — Brown and black

Dirty or leaking injection nozzle
Clogged air cleaner
Early fuel injection timing
Late fuel injection timing
Excessive fuel fed to faulty injection pump
Poor compression
Unsuitable fuel
Rarefied atmosphere
Improper valve setting



150 h.p. JBS 600 gives Cummins Diesel economy

CUMMINS **Cummins**

Engine Company, Inc. • Columbus, Indiana

Cummins newest diesel cuts fuel costs as much as 33%

and performance to medium heavy trucks!

This diesel is engineered especially for medium heavy-duty truck service. It features rugged 4-cycle design for long life and minimum maintenance costs.

It embodies all the features of the exclusive Cummins system of fuel metering and injection; is simple and easy to maintain. This system has made Cummins Diesels famous for greater efficiency under all operating and load conditions. Every gallon of fuel produces more mileage and the JBS-600 gives top performance on less expensive diesel fuel. *(No. 2)*

The Cummins JBS-600 Diesel is offered as standard or optional equipment by the leading truck and bus manufacturers. Their local representative or the Cummins dealer in your area will give you specifications.

Leader in rugged, lightweight, high-speed diesel engines [60-600 h.p.]

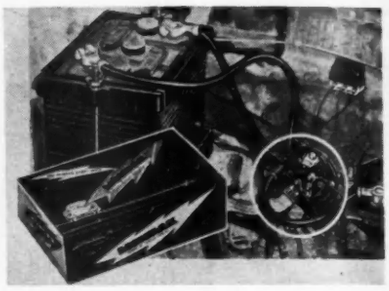
New Products

Continued from Page 52

type" capacity, is being introduced by Marquette Mfg. Co., Minneapolis, Minn. It readily handles up to 5/32-in. electrodes, and can be used wherever 220 volt, 60 cycle, single-phase current is available. It is built to equal or exceed NEMA and REA specifications.

P24. Voltage Selector

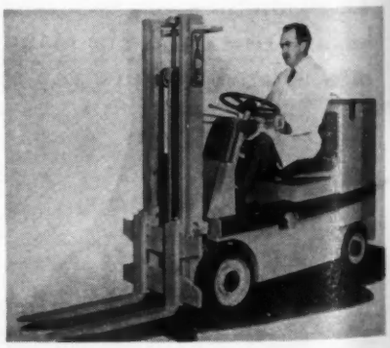
Truck drivers can double the starting voltage right from the driver's seat, according to Illinois Auto Electric Co., Chicago, Ill., distributors of the



new "Mondak" voltage selector switch. It channels the power of two batteries to spin the engine at double speed for hard starting. Operation of the switch is controlled by a knob on the dashboard, which allows the driver to select either 6- or 12- or 12- or 24-volt power. When the knob is released, the batteries charge in parallel, yet separate as soon as the engine is shut off. It provides selective 6- or 12-volt power for trailer marker lights, and trucks having auxiliary engines can now be started on 12 volts.

P25. Lift Truck

Designed for over-the-road vehicle loading, a new low-clearance, narrow-width electric fork lift truck is announced by Yale Materials Handling



Division, Yale and Towne Mfg. Co., Philadelphia. A 68-in. mast height as-

(TURN TO PAGE 242, PLEASE)

CK TIRE IN YEARS

UP TO 47% MORE TREAD LIFE!

design!
tread!
body!

Only this new GOODYEAR TRACTION HI-MILER gives you

NEW BALANCED DESIGN — cord plies are laid at scientifically balanced angles which insure every cord carries an equal load. This, plus many other great improvements, assures as much as 47% longer tread life!

NEW FIVE RIB STOP-NOTCH TREAD—deep-cut slots in the five wide riding ribs compress into sharp-edged "teeth" as they meet the road—provide greater nonskid safety—24% more traction.

NEW TRIPLE-TEMPERED CORD BODY — the strongest, toughest cord modern science has produced for tire construction. So lastingly durable it controls tire "growth" — superbly resistant to bruising, heat and blowout—will safely take more recaps. Available in Nylon or Rayon.

In 3-T Rayon at regular price
3-T Nylon only slightly more

Hi-Miler—T. M. The Goodyear Tire & Rubber Company, Akron, Ohio

OD YEAR

HAULED ON GOODYEAR TRUCK TIRES THAN ON ANY OTHER KIND

New Products

Continued from Page 238

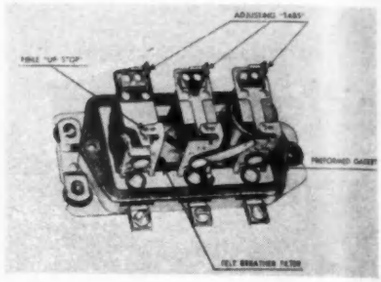
sures that any opening that will clear the mast will also clear the operator. Available in 2000 and 3000 lb capacities, it is powered by a 15 kwh, 30-volt battery. It has a 50-in. wheel base and 36-in. forks, pivots around a 90 deg corner in a 61-in. aisle and can make a right angle turn in a 119-in. aisle. Forks adjust from 10 to 31½ in. outside. It stacks 100 in. above floor level. Tilt is 3 deg forward and 10 deg backward. Under-carriage of the truck will clear a 41½ per cent grade.

P26. Ratchet Adaptor

A new heavy duty ¾-in. square drive ratchet adaptor is now being produced and marketed by B. K. Sweeney Mfg. Co., Denver, Colo. The Model No. 67A converts any combination of work handle, extension, socket or torque wrench into a reversible, ratcheting action tool. It provides ratcheting speeds on many nuts where application of standard ratchet wrenches is impractical. Ratcheting action of the Sweeney adaptor requires a handle movement of only 19 deg.

P27. Voltage Regulator

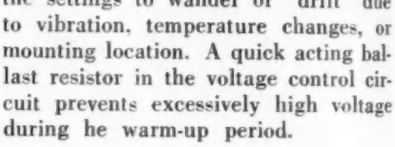
A number of major improvements in voltage regulator design are now appearing in Kem voltage regulators according to Kem Mfg. Co., Inc., Fair Lawn, N. J. A basically new type of



adjustment is provided by metal "tabs" on each unit. No special tools are required and there is no tendency for the settings to wander or "drift" due to vibration, temperature changes, or mounting location. A quick acting ballast resistor in the voltage control circuit prevents excessively high voltage during he warm-up period.

P28. Compression Tester

Fisher Products, Long Island City. N. Y., now has available a pistol-grip recording compression tester. The



Model No. 285 "MoTest" accommodates up to eight cylinders. Kit includes, in addition to the basic instrument, an angular adaptor (for V-8's, etc.), an extension adaptor, a supply of recording charts, spare rubber cones and valves.

P29. Tow-Loader

A new handling device, called the "Tow-Loader" and just announced by Towmotor Corp., Cleveland, Ohio, makes it possible to use thin pallet sheets in place of the conventional fork entry type pallets used in handling unit loads. Consisting of a modified "Towmotor Unloader" accessory with a gripping device built into the pusher frame, the "Tow-Loader" pulls the palletized load onto either blades or forks and pushes it off at set-down points. With the "Tow-Loader," the

(TURN TO PAGE 244, PLEASE)

LS builder, R. P. Olsen & Son, Omaha, built this 9-foot refrigerated body for Wilber Wiener, Co., Wilber, Neb.

This 23'Lx7½'Wx8'H van body was built of LS by General Body Co., Chicago for Hassett Storage & Moving, a Chicago, Ill., member of Allied Van Lines.

Whether Your Trucks are LARGE or small

—you can get an LS Body tailored to the exact size *you* need for efficient, LOW-COST operation

There's no limit to size of truck bodies built from Lindsay Structure... whether your trucks are large or small, you can benefit from the many money-saving advantages of a functional LS body tailor-made for your specific delivery operation.

The Lindsay method utilizes die-formed standardized LS components fabricated in 78,085 panel sizes... enables body manufacturers to give prompt delivery on a steel or aluminum LS truck body tailored to the exact size and style you need for efficient, low-cost operation.

And, careful standardization of LS parts simplifies repair and maintenance... assures complete uniformity of a fleet's truck bodies—wherever and whenever built.

For years and years of efficient, low-cost operation—equip your next truck with a LS body in *steel or aluminum* . . . it will be one of the best investments you ever made.

There are over 200 LS body manufacturers in the U. S. and Canada to serve you. Or, if you prefer, we will gladly work with you and the manufacturer of your choice. Investigate Lindsay Structure today. Write Lindsay Structure, Inc., 5000 W. Dempster St., Skokie, Ill. In Canada—Lindsay-Wilson, Ltd., 1466 Lake Shore Rd., Long Branch, Ont.

thickness of the ordinary pallet is saved and the space is completely utilized.

P30. Vehicle Cleaner

A new cleaning compound, Oakite Composition No. 72, can be used mixed with cold water to clean bus and truck exteriors and interiors by manual or mechanical application, according to Oakite Products, Inc., New York City. An alkaline-type powdered material readily and completely soluble in cold or hot water. It is designed for easy removal of road film, oily soils and bug deposits.

P31. New Tool Stand

A new mobile tool stand has been developed by Standard Pressed Steel Co., Jenkintown, Pa. The stand, made of heavy gage steel and mounted on 2½-in. swivel casters, has a cabinet and two drawers. The top is a recessed tray. Known as Model No. 426, the stand's overall dimensions are 18 by 24 in. by 35¼ in. in height. The cabinet is 14 in. high. Each of the drawers is 5 in. high, has roller suspension and individual padlock attachment.

P32. Flow Gun

The Binks Mfg. Co., Chicago announces a new precision flow gun, Model No. 31, designed to provide increased efficiency in flowing sealing

compounds such as asphalt, rubber cement and similar heavy materials. Also, it can be used to seal gaskets, mouldings, cracks, corners and crevices on vehicle bodies. In all, a selection of 16 nozzles with orifices of various sizes and shapes for many types of work are offered.

P33. Brake Spring Plier

Champion DeArment Tool Co., announces the new Model No. 614 brake spring plier incorporating a standard hook and point for conventional brake springs as well as a newly designed Bendix fitting for late model cars and trucks. The Bendix fitting is so designed that lifting and prying are unnecessary. The mechanic simply inserts fitting and turns plier—a groove in the fitting lifts spring off pin. Spring is easily replaced on pin by use of specially designed handle.

P34. Pipe Line Regulators

A new No. 8900 series of regulators has been announced by Air Reduction Sales Co., New York City, to supersede their No. 86000 series, designed for use with gases supplied by pipeline systems using comparatively low pressures. Features claimed include: greater flow capacities, improved regulation and lower static increment, steady gas pressure thereby eliminating the need for frequent regulator adjustment. They are of the inverse-type design and feature a seating arrangement which requires no nozzle.

P35. Truck Mirror

The R. E. Dietz Co., Syracuse, N. Y., have announced a new, western-style truck mirror, Model No. 78. Fea-

LE ROI V-8 POWER

makes light of heavy payloads!

AUTOCAR V-8
powered by 200-hp
LE ROI
H540/V8

The Autocar V-8 is the first heavy-duty highway tractor to give you the money-making advantages of a 200-hp V-8 engine:

Bigger Payloads! Low weight-to-horsepower ratio (only 6 lbs. per HP) lets you carry bigger payloads at higher road speeds.

Fast Acceleration! Le Roi's 200-hp H540/V-8 design gives you greater flexibility for faster trips. High torque rating levels out the hills.

Fuel Economy! Plenty of reserve power lets you operate in the most economical range.

Low Maintenance Costs! Le Roi's valve-in-head design puts maintenance locations out in open, reduces downtime and shop-labor costs. Wet cylinder sleeves can be replaced at a fraction of the cost of reboring the block.

See the Autocar V-8 at your nearest Autocar branch office. Or write Autocar, Ardmore, Pa., for colorful booklet.

E-92

New Products

Continued from Page 244

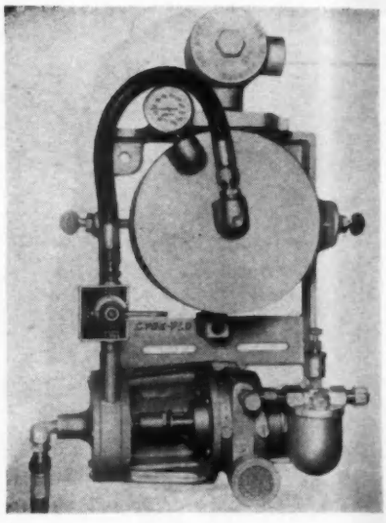
turing multiple bracing for resistance to jarring and vibration, the 6 by 16-in. hammertone gray finish mirror head holds a clear, plate glass mirror mounted in a rubber shock cushion.

P36. Towing Tractor

New features to provide greater driving safety, comfort and simplicity have been incorporated in the re-designed "Clarkette 5" line of general utility towing tractors, according to Clark Equipment Co., Battle Creek, Mich. While basic dimensions of this 500-pound drawbar pull capacity machine have been retained, the driver platform has been lengthened and the brake pedal relocated to provide more room for the operator without affecting the turning radius and the intersecting aisle dimensions. Control lever has been altered to reduce hand fatigue and the center control linkage has been moved to a lower cross bar, so that the control handle is now obstruction free. Exhaust pipe is on the right side of the truck. The Continental N-62 engine has been equipped with revised piston rings and aluminum pistons.

P37. Paint Circulator

Pigmented finishes and fillers can now be hot sprayed regardless of abrasive content with the development of the new "Air Circaflo Pressurematic" heater, announced by Spee-Flo Co., Houston, Texas. It has an integral air motor centrifugal pump which circulates the material from the heater to



the gun and return to maintain a constant hot spray temperature for continuous and intermittent service. The new heating unit is a coil-less heat exchanger that cannot clog and requires no maintenance. Rated at 9 gal per hr on the Model No. 300-APA and 18 gal per hr on the No. 600-APA.

P38. Powdered Electrode

Heavily coated electrodes containing large quantities of powdered metal in their coatings announced by Lincoln Electric Co., Cleveland, Ohio, obtain increased welding speeds on the order of 50 per cent. The major cause of operating difficulties that limit welding speeds is the fact that the welding arc normally creates more heat than can be effectively used by conventional electrodes in melting the parent metal, the core wire and the coating. This excess heat usually melts an excessive amount of parent metal. The arc force throws this excess and some of the melted core wire out of the molten pool. The result may be too much penetration, gouging, undercutting and spatter. Electrodes with powdered metal coatings use this excess heat available in the arc to increase welding speeds. The powdered metal in the

(TURN TO PAGE 250, PLEASE)

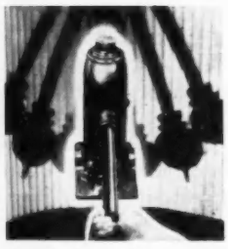
WALKER JACK

"Series 900" Portable Hydraulic

Experienced truck operators know a safe, dependable tool box jack is a "must" to keep pay-loads rolling. That's why you'll find Walker *Series 900* Portable Hydraulics in trucks that go coast to coast or just around the block.

From cap to base, Walker *Series 900's* are the product of years of on-the-job experience; careful, constantly refining engineering; and manufacturing "know-how."

Take the new "Projectile" tank. It's designed in the shape of a heavy armor-piercing shell to withstand shock . . . to better resist eccentric loading . . . and to distribute the load more evenly on the base.



"Pendulum Balance" makes positioning easy. When you lift it by the handle, a *Series 900* automatically takes an upright position. You can't break or lose the cap. It's forged of high carbon steel as an integral part of the coarse-threaded, quickly-adjusted extension screw.

Smooth, dependable operation is assured by "Ryth-Matic" valve action. Suction and discharge valves work in perfect synchronization at lightning speed. And the "Snug-Fit" Power Pump, sealed with specially impregnated cup leathers, saves time and effort. At top height there's extra strength to resist eccentric loads in the "Solid End" Lifting Ram. Lowering is always safely and easily controlled by the "Micro-Accurate" Release.

Yes, for any pay-load, it pays to carry a Walker *Series 900* portable hydraulic in the tool box. See them—try them—at your Walker Jack distributor.

What's *News* at Walker

Holds the Heavyweight Title

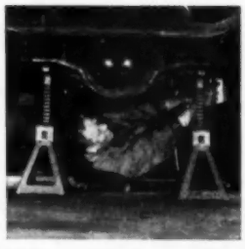
When this Walker 10-Ton Hydraulic Roll-A-Car rolls into action, even the heaviest trucks and buses give ground in a hurry. With its special precision-honed power cylinder, only a minimum of effort is required to safely lift the heaviest loads. Roller bearing wheels and ball bearing casters make for easy maneuvering, quick positioning, and dollying. 3-position handle locks at most convenient operating level and the long, low rugged frame is ideally suited for low clearance. No. 780 goes under and up with ease.

The Modern Spirit of "76"

There's spirited enthusiasm for the revolutionary new Walker "76"—the only completely portable self-contained hydraulic one-end lift on the market . . . unmatched for versatility, dependability, performance. Two tons of hydraulic lifting power make it one of the handiest, most essential shop aids ever devised. A 44″ top height makes it ideal for body and fender work—speeds exhaust replacements, undercoating, shock service and many other "hard-to-get-at" jobs—meets many extra lift requirements. See your Walker Distributor for a "76" demonstration.

Frees "Front-Line" Equipment for Action

Vehicles elevated for long periods need not tie up valuable jacks and lifts—free them for action with Walker "Rigid Racks." Constructed of break-proof malleable iron on the patented "Wedge-Lock" principle, they provide safe dependable service for a lifetime. Walker "Rigid-Racks" won't topple or slip, regardless of height . . . there are no springs or pins to shear. 2 to 5 ton capacity.



Send Walker Jacks Back Home for Repairs

For fast, factory-supervised repairs, with "new jack" guarantee, ask your Walker Distributor for address of the nearest Authorized Walker Jack Service Station.

Walker Leads in Jacks

In transportation . . . in industry . . . in every field of activity where heavy loads must be lifted safely and economically, Walker Jacks are the standard of dependability.

SEE IT FROM YOUR JOBBER

Your Walker distributor is JACK HEADQUARTERS

New Products

coating is melted by this heat and becomes an additional source of metal for the weld, thus permitting an increase in welding speeds.

P39. Cleaning Compound

Oakite Products, Inc., New York City, have announced the development of a new cleaning material, Oakite Composition No. 93, specifically designed for use in steam-generating equipment and in steam guns where the solution is siphoned from an auxiliary tank. Normal working concentrations range between ¼ and 4 oz per gal of water, into which the material is sprinkled and stirred until dissolved. Solutions are non-toxic.

P40. Floor Coating

"NeoFloor" is a new easily applied skid-proof surface coating for concrete, wood and metal floors. Developed by the Pennsylvania Salt Mfg. Co., Philadelphia, for use in plants, shops and other places where oils, greases and chemicals create safety hazards and maintenance problems, NeoFloor is said to provide safe, comfortable footing and long lasting surfaces which stand up under heavy traffic, heat-aging and other rugged conditions. It is a grit-like material anchored in a matrix of resilient neoprene and bonded firmly to the floor with an adhesive primer. Both primer and coating are supplied in liquid form for easy, quick-drying application with brush or roller.

P41. Cleaning Machines

New Models of "Turbo-Blast" parts cleaning machines have been announced by Storm-Vulcan, Inc., Dallas, Texas. Models range in sizes from 20-gal solution capacity to 2300-gal capacity. All models are equipped with impellers which create a violent scrubbing action. Units are heated by steam, fuel oil, natural gas or manufactured gas, thermostatically controlled.

P42. Break-Away Valve

Power Brake Parts Mfg. Co., Chicago, has announced a remote control dual valve for air or vacuum brakes that meets ICC specifications in regard to breakaway brakes, 194.43. It consists of a dual valve mounted to the rear of the cab and controlled by a dash or steering post mounted control lever. Control permits application of trailer brake separately from tractor brake and, in event of trailer breakaway, closes trailer air line and preserves air in tractor system permitting safe function of tractor brakes.

P43. Heavy-Duty Mirror

Anthes Force Oiler Co., Fort Madison, Iowa, has announced a 3/16-in. thick mirror with a 5¼ by 16¼-in. reflective surface. It is mounted in a soft rubber channel and does not touch the metal frame. Arms are made of 10 gage steel and come 14, 16 and 19½ in. long. All equipment for mounting is included.

P44. Dock Shelters

Collapsible loading dock shelters announced by Dazzo Products, Inc., New York City, are made of mildewproofed canvas mounted on a frame and extend from the building, when in use, through a "scissors" type extension support. They are made in three different models and extend 6 to 7½ ft out from the building when extended. They provide a waterproof shelter for cargo protection in loading and unloading for almost any size of truck body.

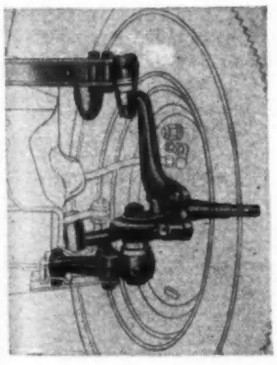
Why did Ford adopt Ball-Joint Front Suspension?



Because with more horsepower you need greater stability, easier steerability!

...and that's not all

The growing trend towards increased engine output places a greater emphasis on easier, safer steering and over-all stability. That's why Thompson's front suspension ball-joints . . . *the first major development in front wheel suspension in 20 years* . . . are incorporated into the latest model Ford.

Other Advantages, Too

There are five *additional* automotive problems solved by ball-joint front suspension: Creating new space for wide modern engine design • Eliminating front suspension and steering bind • Cutting front end overhaul time *by hours* • Reducing lubrication points from 12 to 4 • Increasing service life *many times over.*

Half-Century of Teamwork

This Thompson "Engineered Steering" development is a typical example of Thompson's side-by-side cooperation with the Automotive Industry over the past 50 years.

Yours for the Asking

If you have a steering linkage problem you'd like to discuss with Thompson's skilled and experienced Steering-Linkage Engineers, write, phone or wire Thompson Products, Inc., Michigan Plant, 7881 Conant Avenue, Detroit 11, Michigan.

THE DIFFERENCE IN PEDRICK FORMFLEX DESIGN Makes the BIG DIFFERENCE in Performance

THE Pedrick FORMFLEX CHROME OIL RING WITH THE FAMOUS "EQUALIZER"

Radically different type expander gives Formflex rings 5 times more conformability than rings with hump-type expanders. Stops oil waste quickly, yet meters enough oil to lubricate against wear.

ALMOST TRIPLE OIL DRAINAGE—2½ times more open area provided by "Equalizer" and Spacer. Also, no plugging.

UNIFORM PRESSURE DISTRIBUTION — "Equalizer" gives equal outward pressure for more perfect seal—better oil control—longer life.

CHROME FOR LONG LIFE—Faces of steel rails chrome plated for 2 to 4 times longer life.

INDEPENDENT OF GROOVE DEPTH—"Equalizer" does not rely on contact with bottom of groove for pressure or tension.

THE Pedrick CHROME TOP RING FOR HEAVY DUTY ENGINES

2 TO 4 TIMES LONGER LIFE. The solid hard chrome face lasts up to 4 times longer and also reduces wear on cylinder wall and on all the other rings.

ELIMINATES BREAKAGE. A special alloy, centrifugally cast and heat-treated, is exceptionally tough and stands up without breakage even under the heaviest loads.

HEAT SHAPED. Process developed and used exclusively by Pedrick to insure correct and lasting tension, and to *maintain* uniform pressure around entire circumference of ring.

POSITIVE 3-WAY SEAL. Twist-Seal design gives point contacts at cylinder wall and upper and lower sides of ring groove—for quick and lasting seals at all three locations.

Gates Rubber Co.
999 So. Broadway
Denver, Colorado

Gentlemen:

We thought you might be interested in hearing of the remarkable service we are getting from your products.

We have been in our present type of business for approximately ten years and during that time we handled some belts and hose other than Gates. A few years ago we changed to Gates 100% and have found that we receive from 50% to 75% longer life from your famous T, TG and TS series of belts, than from any other brand that we previously handled.

We service all kinds of trucks and truck-tractors from every state in the Union and have found that your catalogue and specifications are always up to date and we know that a Gates belt is always a perfect fit which assures the customer of maximum service.

Yours very truly,
Truck & Trailer Equipment Co.
E. A. Gudorian

"...always a perfect fit ...last 50% to 75% longer" ..make satisfied customers

tough, multiple-ply cover developed by world's largest maker of V-Belts.

built with rayon cords—the same kind used to increase life of Truck Tires.

Gates®
The mark of Specialized research

Look for this T*

To get 50% to 80% more service out of fan belts look for this "T" on both label and belt. The "T" is your assurance of a belt specially engineered for Trucks and Buses.

*REG. U.S. PAT. OFF.

Those 3 headlines tell you *why* the Truck & Trailer Equipment Co., of Waco, Texas, uses Gates "T" Belts *exclusively* in servicing big trucks and truck tractors from all parts of the country.

Like truck maintenance men all across the country, this progressive truck service firm knows from actual experience that Gates "T" Belts — specially engineered for trucks and buses — wear from 50% to 75% and even 80% longer.

To their truck customers therefore, this means road delays due to fan belt failures are practically eliminated . . . trucks keep on schedule . . . *net operating time is kept UP* . . . revenue and profit are increased.

The longer service life of Gates "T" Belts makes money for truck operators another way — belt replacement costs are cut in half, and far more than half according to written statements from Fleet Managers, Purchasing Agents and other users from coast to coast.

It's easy to prove to yourself the cost-cutting, money-making performance of the Gates "T" Belt — simply install it on your equipment and match its record against any other belt you have ever used. There is a Gates Belt jobber near you who will supply you promptly with the Gates Belts you need. The Gates Rubber Co., Denver, U.S.A. — *World's Largest Maker of V-Belts.*

Great Dane's New Straight Truck Body

GREAT Dane Trailer Co. has announced introduction of a new series of straight truck bodies. It is an all-aluminum body constructed on the principle of the Great Dane dry cargo trailer.

The Titian, as the new unit is called, has the vertical post strength members on the outside, with aluminum sheets forming the inside and outside panels. The hollow extruded post reduce considerably the weight of the body while giving it exceptional strength and rigidity.

These new bodies will be distributed in pre-fabricated packages, adaptable in length and doors to meet the needs of the truckers. The bodies are available in 12', 14', 16' and two-foot intervals to any desired length.

For curb-side loading, side doors are available, also. Several types of rear doors are offered: double doors alone or with a tail gate, folding gate, or the tail gate alone.

Selected Maintenance Manuals

How to Get More Stops Between Relines—12 pages—Tips on use and maintenance of brakes and on brake relining. Free—Sales Dept., Automotive and Industrial Brake Lining Division, Grizzly Mfg. Co., 700 West Caroline St., Paulding, Ohio.

How to Prevent Premature Brake Block Failure — 13 pages — Trouble shooting guide on brake block failures. Illustrates and explains causes of premature failure, tells how to correct it. Free—address as above.

Johns-Manville Brake Reliner's Manual — 90 pages — Description of parts and operation of major brake systems and makes designed for passenger car and light truck fleets. Includes assembly, service and maintenance procedures for brakes and related components. **Free**—Friction Materials Dept., Industrial Products Division, Johns-Manville Sales Corp., 1617 Pennsylvania Blvd., Philadelphia 3, Pa.

Johns-Manville Fleet Reliner's Manual—80 pages—**Training** manual for operation, inspection and maintenance of bus, truck and trailer brake and brake control systems especially designed for fleet use. Free—address as above.

Modern Brakes—27 pages—Description of parts and operation of major brake systems and makes. Includes service, maintenance and trouble shooting data for brakes and related components. Free—The Russell Mfg. Co., Middletown, Conn.

Thermoid Brake Service Reference Book—Description of parts and operation of major brake systems and makes. Includes assembly, service and maintenance procedures for brakes and related components. Free—Automotive Replacement Division, Thermoid Co., Trenton, N. J.

Wagner Brake Maintenance Manual—50 pages—Description of parts and operation of major brake systems and makes, including mechanical, hydraulic, air, vacuum and power brakes. Includes assembly, service, maintenance and trouble shooting data. Each $1.00—Sales Promotion Manager, Automotive Division, Wagner Electric Corp., St. Louis 14, Mo.

Warner Electric Brake Service Manual, No. 547F—64 pages—Complete description of operation, maintenance, installation of Warner electric brake system. Fully illustrated to aid in assembly and trouble shooting. Each 20¢—Warner Electric Brake and Clutch Co., Beloit, Wis.

Cooling Systems

Serviceman's Manual on the Automotive Cooling System—41 pages—Covers cooling system operation, selection of coolant, chemical and mechanical cleaning of the cooling system, preparation for summer or winter driving, and a large trouble-shooting guide. Each $2.00—Advertising Dept., E. I. du Pont de Nemours and Co., Inc., 2494 Nemours Bldg., Wilmington 98, Del.

Radiator Water-Flow Chart—Folder for checking radiator water-flow for almost all trucks and passenger cars against manufacturers' specifications. Used for checking flow before and after cleaning to determine efficiency of job done. Free—Dept. R17, Equipment Division, Inland Mfg. Co., Omaha 8, Nebr.

Manual of Cooling System Service, No. AFP-1361—40 pages—Describes servicing and maintenance of the cooling system, including operation, cleaning and trouble-shooting. Free—Automotive Engineering Dept., National Carbon Co., a division of Union Carbide and Carbon Corp., 30 East 42nd St., New York 17, N. Y.

The Whys and Hows of Voltage Regulators—Describes operation of Blue Streak voltage regulators. Free—Standard Motor Products, Inc., 37-18 Northern Blvd., Long Island City 1, N. Y.

Engines

Burd Handy Handbook—48 pages—Pocket-size handbook outlining operation and maintenance of the carburetor, ignition parts and timing, cooling system, bearings and oiling system, valves, cylinder head and walls, and pistons and piston rings. Free—Sales Dept., Burd Piston Ring Co., Rockford, Ill.

Practical Pointers on Engine Maintenance—31 pages—Review of internal combustion engine operation and trouble-shooting guide to the more common causes of troublesome operation. Free—Ethyl Corp., 100 Park Ave. Bldg., Park Ave. at 41st St., New York 17, N. Y.

Thompson Repair and Tune-Up Manual, Vol. 2, Trucks, Buses, Tractors, Diesel Engines, Etc.—514 pages—A how-to-do-it manual covering operations necessary in engine repair and tune-up. Each $2.50 — Service Division, Thompson Products, Inc., 2209 Ashland Rd., Cleveland 3, Ohio.

Pedrick Engine Repair Manual—170 pages—Covers general procedure for general repair and tune-up of all engines, passenger car engines, and truck and bus engines. Each $2.25 plus 50¢ per year for supplementary bulletin service to signers of Pedrick Fleet Agreements. For information—Advertising and Sales Promotion Dept., Wilkening Mfg. Co., 2000 South 71st St., Philadelphia 42, Pa.

Modern Preventive Maintenance for Gasoline and Diesel Trucks—32 pages—Complete outline of preventive maintenance program for truck engine, transmission, brakes and wheels. Can be adapted for most operations. Free—GMC Truck and Coach Division, General Motors Corp., Pontiac, Mich.

Dayton Fan Belt Service Manual, No. A-951—Describe service and adjustment of engine fan belts. Free—Advertising Dept., Dayton Rubber Co., 2342 West Riverview Ave., Dayton 1, Ohio.

General Operation and Service of Automotive Pulley and Belt Drives, Service Bulletin No. 1006—Data on operation and service, including trouble-shooting, on engine fan belts.

620,000 TOUGH MILES A MONTH

C. H. Crutcher, Operating Manager, keeps his finger on the vast operation of Healzer Cartage Company from his office in Kansas City, Missouri.

CASE HISTORY

Healzer Cartage Company's 56 over-the-road tractor units and 55 city pick-ups cover the greater part of the Mid-West, hauling general commodities.

In an operation of this size, a motor oil must be an all-around good oil to do an all-around good job. Healzer Cartage began using Phillips 66 Heavy Duty Motor Oils in all their equipment four years ago.

The records speak for themselves:

WEAR: .003 to .005 per 100,000 miles
Sludge & Varnish: Negligible
Bearings: No trouble
Fouling: None
Oil Consumption: 128 miles per quart—includes oil changes every 2,000 miles.

From these results you can see why Healzer Cartage is well satisfied with Phillips 66 Heavy Duty Motor Oil. It can do as much for you!

Here's one of the 56 over-the-road tractor units protected by Phillips 66 Heavy Duty Motor Oils.

Set up your own test. A Phillips 66 Lubrication Engineer will be glad to help you plan it without obligation. Write to: Sales Department, Phillips Petroleum Company, Bartlesville, Oklahoma.

Free—Technical Service Dept., Leece-Neville Co., 5109 Hamilton Ave., Cleveland 14, Ohio.

How to Hone Cylinders—Instructions on cylinder honing. Free—Sales Dept., Lisle Corp., Clarinda, Ohio.

Fits and Finishes — Discussion of maintenance and operation of piston pins and cylinders. Free—Advertising Dept., Sunnen Products Co., 7910 Manchester Ave., St. Louis 17, Mo.

Hastings Piston Ring Handbook—Describes maintenance, care and operation of piston rings. Includes illustrations of various types. Free—Hastings Mfg. Co., Hastings, Mich.

Service Manual for the Doctor of Motors—90 pages—Complete book on piston ring service and maintenance. Includes data on cylinder, carburetor and other engine troubles affecting piston rings. Free—Advertising Services Dept., Perfect Circle Corp., Hagerstown, Ind.

The Automotive Engine Piston—Covers operation and construction of automotive aluminum pistons. Free—Advertising Dept., Aluminum Industries, Inc., Cincinnati 25, Ohio.

The Automotive Engine Valve — Data on automotive engine valve operation, construction and maintenance. Free—address as above.

The Principles of Valve Reconditioning—Covers valve reconditioning —Free—Advertising Dept., Black and Decker Mfg. Co., Towson 4, Md.

Valve Service Manual, No. 253—Procedure for servicing valves with K-D valve surfacing tools. Free—Sales Dept., K-D Mfg. Co., Lancaster, Pa.

A Good Valve Job Pays—23 pages —Information on valve servicing, checking and installation. Free — Ethyl Corp., 100 Park Ave. Bldg., Park Ave. at 41st St., New York 17, N. Y.

Engine Bearing Service Manual—109 pages—Complete review of engine bearing operation, types, design characteristics, tools used in installation, procedure in replacing, and trouble-shootng. Contains a complete review of engine operation in relation to bearing wear. Each $1.00—Advertising and Sales Promotion Dept., Federal-Mogul Service, 11031 Shoemaker, Detroit 13, Mich.

Johnson Automotive Bearing Manual—97 pages—Complete review of removal, installation and maintenance of engine bearings. Fully illustrated to provide information on trouble-shooting, lubrication, and different types of bearings. Includes description of checking bearings and other engine parts affecting the bearings. Each $1.00—Johnson Bronze Co., New Castle, Pa.

Automotive Engine Bearings, Lubrication Magazine, May, 1953 — Trouble-shooting discussion on automotive engine bearings with special emphasis on lubrication of the bearing and other engine parts to reduce bearing wear. Free — Advertising Division, Sales Dept., The Texas Co., 135 East 42nd St., New York 17, N. Y.

Fuel Systems

Fuel Pump Shop Manual, No. A-1919—Information on operation and repair of the fuel pump, including combination fuel and vacuum pumps. Includes testing, trouble-shooting and overhauling. Free—Advertising Dept., AC Spark Plug Division, General Motors Corp., 1300 North Dort Highway, Flint 2, Mich.

Fuel Pump Service Manual — 16 pages — Covers service, operation, checking, maintenance and testing of Hygrade fuel pumps. Free—Advertising Dept., Hygrade Products Division, Standard Motor Products, Inc., 37-18 Northern Blvd., Long Island City 1, N. Y.

Butane-Propane Power Manual — 334 pages—Full discussion of propane-butane powered engines. Covers carburetion, timing, pressure, igni-

tion, fuel tanks, storage tanks, safety, conversions and other LP gas questions. Each $3.50—Butane-Propane News, 198 South Alvarado St., Los Angeles 4, Cal.

Fleet Owner Data Book—Maintenance and operation of various models of Holley carburetors. When requesting, specify make and model of vehicle and carburetor. Each $1.00—Education Dept., Holley Carburetor Co., Detroit 4, Mich.

Student Data Book—Basic text on carbureton theory and review of operation of Holly carburetors. Each $1.50—address as above.

Engine Principles and Automotive Tune-Up Fundamentals — Complete textbook covering internal combustion engine ignition, compression, timing and carburetion. Includes maintenance, service, adjustment and operation data. Each $2.00—address as above.

Operation and Maintenance Manual, Rochester Carburetors—over 100 pages—Includes theory of carburetion, as well as operation, maintenance, service, adjustment, inspection and assembly of Rochester carburetors. Each $1.50—United Motors Service, 3044 West Grand Blvd., Detroit 2, Mich.

American Bosch Fuel Injection Equipment Maintenance Information, Form No. 3465—50 pages—Describes maintenance, service and operation of American Bosch fuel injection pumps, fuel supply pumps, mechanical and pneumatic governors, nozzles and nozzle holders and fuel oil filters. Fully illustrated. Each 25¢—Advertising Dept., American Bosch Corp., Springfield 7, Mass.

Lanova Combustion System for Diesels—Covers service, maintenance and operation of the Lanova combustion system for diesels. Free—Lanova Corp., 38-15 30th St., Long Island City 1, N. Y.

Fuels, Lubrication

The Modern Bus and Truck, Fuels and Lubricants, Parts 1 and 2, Lubrication Magazine, August and September, 1952—Discussion of characteristics of modern fuels and lubricants for today's trucks and buses. Included are sections on desirable characteristics in various fuels and lubricants as well as many trouble-shooting tips. Free — Advertising Division, Sales Dept., The Texas Co., 135 East 42nd St., New York 17, N. Y.

Modern Automotive Engine Oils, Lubrication Magazine, January, 1952—Reviews the operation and effects of engine oil lubricants, including detergent oils and additive agents. Free—address as above.

Some Problems Associated with Lubrication of Large Engines, Lubrication Magazine, November, 1952—Discusses several problems that arise in the operation of larger diesel engines and suggests how they may be corrected. Free—address as above.

Approved Lubrication for Trucks with Bus and Coach Recommendations—109 pages—Data on lubrication requirements of a majority of trucks. In addition to the lubrication specifications, it includes how-to-do-it information on servicing the vehicle. Each $18.00—Sales Dept., The Chek-Chart Corp., 31-33 East Congress Parkway, Chicago 5, Ill.

Service Man's Guide to Automotive Lubrication—Tips on lubrication servicing mainly for passenger cars. Each $4.00—address as above.

The How and Why of Automotive Lubrication—This set of six booklets covers lubricaton of engines and engine accessories, transmissions, drive line and differential, springs, brakes, wheels, body units and chassis, automatic transmissions and other component parts. Each set of six $4.50—address as above.

Diesel Engine Lubrication — Discusses maintenance of diesel engines

from lubrication standpoint. Includes trouble-shooting tips. Free — Sales Dept., Cities Service Oil Co., 70 Pine St., New York 5, N. Y.

Diesel Engines—Fuels and Lubricants—Covers fuels and lubricants for diesel engines. Contains maintenance, service and trouble-shooting tips. Free—Sales Dept., Sinclair Refining Co., 600 Fifth Ave., New York 20, N. Y.

Tires

How to Get Extra Service out of Truck Tires—24 pages—Covers overload troubles, over and underinflation, tread wear, heating, tubes, matching of duals, and driving for tire conservation. Fully illustrated to aid in truck tire maintenance. Free—Rubber Manufacturers Assn., 444 Madison Ave., New York 22, N. Y.

How to Get Extra Service out of Automobile Tires—30 pages—Covers about the same data as the above booklet with emphasis on passenger car and similar size tires. Information is more detailed and presented more simply. Free—address as above.

How to Rotate Truck Tires and Get Extra Service—4 pages—Summary of how to systematically rotate truck tires including data on matching of tires on dual wheels. Free—address as above.

How to Get Extra Service out of Solid Industrial Tires—8 pages—Review of maintenance and service for solid rubber tires used on materials handling equipment. Free—address as above.

Firestone Data Book for Trucks, Trailers, Passenger Cars and Industrial Vehicles, No. 2-C-817—Includes tire care, maintenance and service data, such as a special trouble-shooting section, instructions for determining tire loads, how-to-figure tire cost per mile, and determining dual wheel spacing and clearance. Free—Advertising Dept., Firestone Tire and Rubber Co., Akron 17, Ohio.

Nine Ways to Get More Miles out of Your Truck Tires—8 pages—Review of tire selection, tube care, dual matching and spacing, alignment, rotation, inflation, load distribution, recapping and repair, and driving habits. Free—Sales Dept., B. F. Goodrich Co., Akron, Ohio.

How to Get More Recaps out of Your Truck Tires—8 pages — Describes cost savings, recapping processes, rotation, tire care, and suggestions on when to recap. Free—address as above.

How to Cut Truck Tire Costs — Covers service, maintenance and care of truck tires. Free—Advertising Dept., Goodyear Tire and Rubber Co., Akron 16, Ohio.

Tools, Equipment

Polisher Use and Care Handbook—How-to-do-it manual on portable, electric polishers. Free—Advertising Dept., Black and Decker Mfg. Co., Towson 4, Md.

Sander Use and Care Handbook—How-to-do-it manual on portable, electric sanders. Free—address as above.

Drill Use and Care Handbook — How-to-do-it manual on portable electric drills. Free—address as above.

Drill Engineering Data—Information on drill selection and training instructions on drilling. Free—Ampco Twist Drill Division, Greenfield Tap and Die Corp., Greenfield, Mass.

The Use and Care of Twist Drills —Instructions on use of twist drills. Free—Cleveland Twist Drill Co., 1242 East 49th St., Cleveland 14, Ohio.

Files, How to Select, Use and Conserve Them — 28 pages — Describes various types of files, how to use them, and their care. Each 10¢—Advertising Dept., Delta File Works, James and Buckius Sts., Philadelphia 37, Pa.

Compressing the Facts about Compressed Air—Data on service and maintenance of air compressing

MINER TUBULAR BAR TYPE *Door Fasteners*

DROP-FORGED!

FOR TRUCK AND TRAILER BODIES

The Miner Truck Door Fastener, No. 2300, is applicable to all sizes of rear and side doors, either single or double, and is particularly desirable for refrigerator bodies. The highly dependable features of the Miner Bar Type Fastener which have always been widely accepted by the truck builders and operators have been retained in this new fastener. Refinements in the component parts have been accomplished by the drop-forging process, which permits the use of special carbon steels of unusual hardness in texture and vastly stronger and denser than the malleable iron product, thereby guaranteeing longer endurance in a service that demands reliability of operation. The vertical locking bar of scientifically designed oval section has the rigidity and torsional strength necessary to withstand the rugged operating conditions which exist at loading platforms.

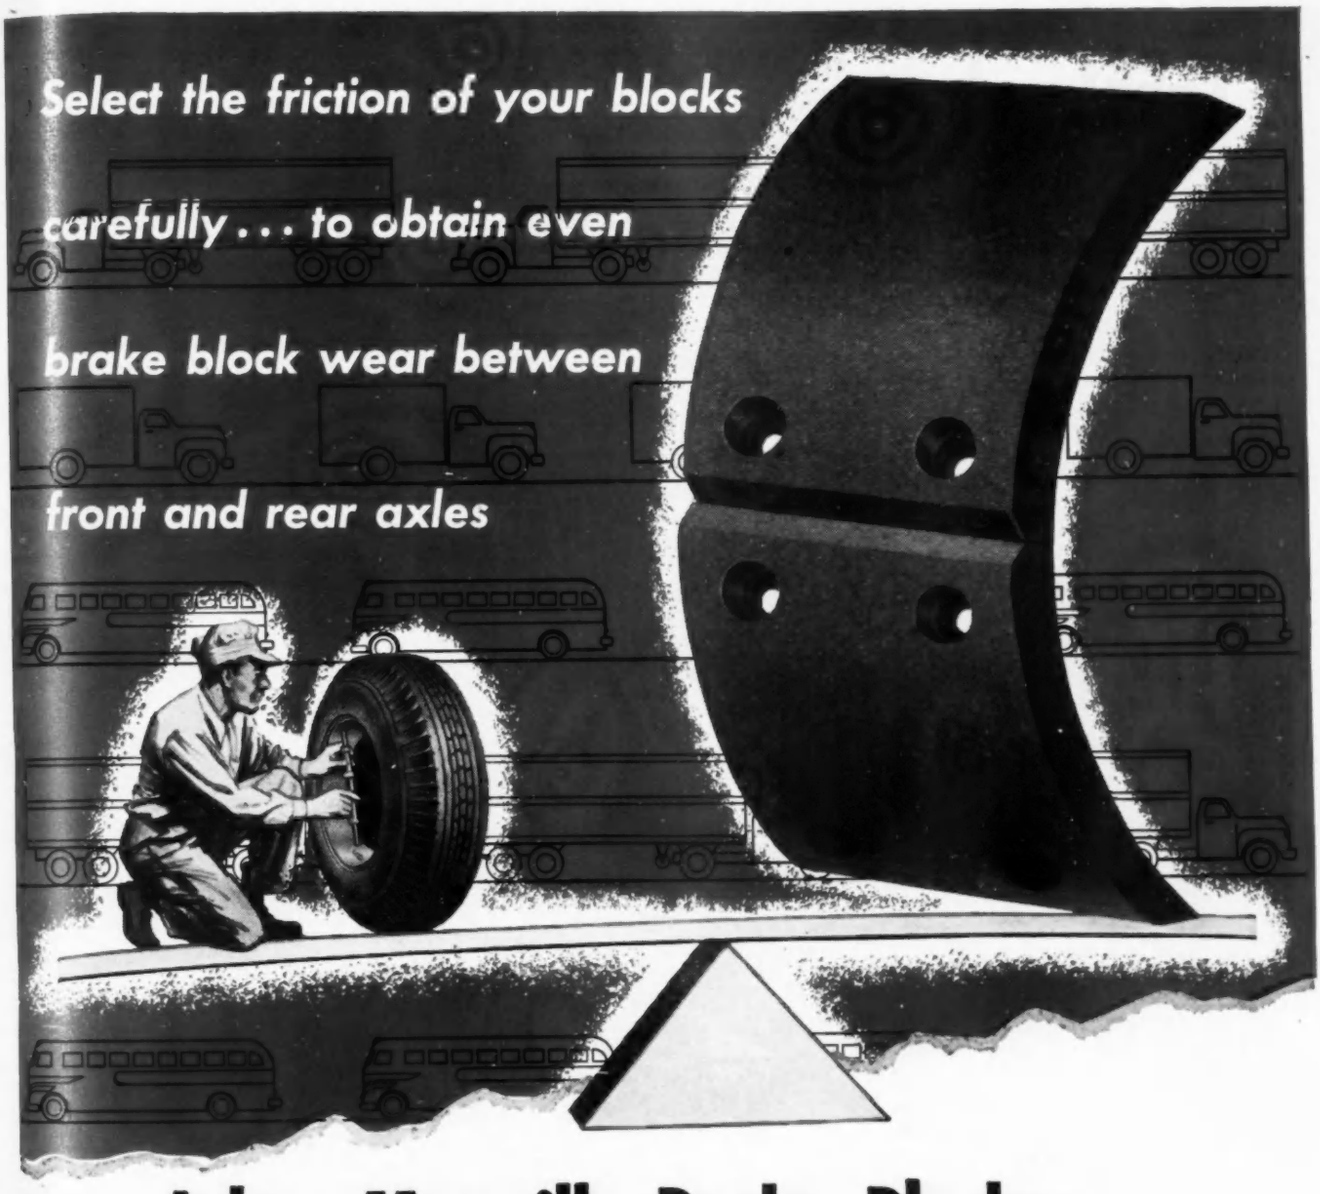
Timken's Octo X Quad

This all-new type truck, called the "Octo X Quad," was produced as an experimental model by Timken-Detroit Axle Division, Rockwell Spring and Axle Co., Detroit. The principles used in its construction can be adapted for other commercial bodies. With the improved weight distribution of the "Octo X Quad," an operator can carry a load of 50,000 to 55,000 lb GVW. It incorporates such features as hydraulically-operated power steering, and power brakes. It is a cab-over-engine design with steering on both the two front axles. GVW distribution is 32,000 lb on the rear tandem and 18,000 lb on the front tandem. Front axles are Timken No. FD-900, or No. FE-900 which are both standard and high production models.



Johns-Manville Brake Blocks . . .

give you top performance at lowest cost per mile

To meet the widest possible range of braking conditions, Johns-Manville Brake Blocks are supplied in individual units, or combination sets of high, medium or low frictional characteristics. This flexibility permits custom engineering for every type of brake to meet every type of condition encountered in the operation of bus and truck fleets.

To bus and truck operators, this means lower brake cost per mile, smoother stops, minimum shop and out-of-service time. Most of all, it means *dependability under all driving conditions.* If you would like more information on Johns-Manville Brake Blocks, write Automotive Division, Johns-Manville, Box 60, New York 16, N. Y. In Canada, 199 Bay St., Toronto.

Johns-Manville *asbestos* **FRICTION MATERIALS**

Pacific Intermountain Express Co., Oakland, Cal., reports gross revenue of $22,352,492 for 1953 as compared to $20,617,465 in 1952. Net income in 1953 was $1,206,364 as compared to $1,121,002 in 1952.

Mason and Dixon Lines, Inc., Kingsport, Tenn., has announced opening of a sales office in Birmingham, Ala.

Badger Freightways, Inc., is the new name of **Cherryland Transport.** Main offices have been moved from Sturgeon Bay to Sheboygan, Wis.

J. A. Garvey Transportation, Inc., Boston, Mass., has moved into its new terminal in Dorchester, Mass.

St. Johnsbury Trucking Co., St. Johnsbury, Vt., opened last month its completely modernized home office.

Mueller Transportation Co., Chicago, has put into operation a new terminal in that city, featuring 16 center dock doors and a 60-ft wide dock.

J. W. Cartage Co., Milwaukee, Wis., for the fifth consecutive year has been given the first place safety award for Wisconsin fleets in its class for its 1953 safety record.

P. B. Mutrie Motor Transportation, Inc., Boston, Mass., celebrates its 65th anniversary this year.

St. Johnsbury Trucking Co., St. Johnsbury, Vt., has announced plans to distribute a bonus of over $50,000. Distribution will be on a percentage basis in relation to salary.

Union Freightways Co., Omaha, Nebr., celebrates its 45th anniversary this year.

American Red Ball Transit, Inc., held its fifth annual convention in Atlanta, Ga., last month. Over 150 agents attended the 3-day meeting.

H. P. Welch Co., Somerville, Mass., celebrates its 50th anniversary this year.

Royal Transit, Inc., Milwaukee, Wis., has purchased **Rockford Motor Service,** Rockford, Ill. Purchase price was reported at more than $100,000.

Watson Bros. Transportation Co., Omaha, Nebr., has set up a perishables hauling division. Main office of the new division will be at company headquarters in Omaha, with a west coast office in Los Angeles, Cal.

Roadway Express, Inc., Akron, has purchased about $1,750,000 worth of Mack diesel tractors. They will be used with 35-ft trailers and were selected after being tested by Roadway in actual operation.

Gilbert Carrier Corp., New York City, opened last month its new terminal especially designed to handle wearing apparel on hangers. It features an overhead pipe rack system to permit about 500,000 garments a day to be hung, inspected, sorted and loaded. The fleet expects to add 13 cities in the states of Ohio, Mo., Minn., Mich. and Ill. to the points it serves in the near future. The new terminal cost about $300,000.

Pacific Intermountain Express, Oakland, Cal., announced last month that over 1 million people have seen its 24-min. color film describing the fleet's operation since it was released in Sept. 1952.

Consolidated Freightways, Portland, Ore., celebrates its 25th anniversary this year.

Cal-Central Trucking Co., Inc., Sacramento, Cal., has plans to open a terminal in San Francisco.

Bekins Van and Storage Co. has sponsored for the past six years a musical radio show on the Pacific Coast network of the Columbia Broadcasting System.

50 YEARS OF SPECIALIZING GIVE DITZLER ITS EXCLUSIVE

KNOW-HOW

DITZLER RIP-RAP OFFERS YOU THESE 3 GREAT FEATURES

1. Unusually high solid content with more film-forming materials gives maximum filling—fewer coats are needed.

2. Unequalled adhesion contributes to durability of finish and keeps paint jobs looking better longer.

3. Superior hold-out assures the uniform appearance and maximum lustre of finishing coat.

Available in dark gray, neutral gray, red oxide and white.

EVERY DITZLER PRODUCT is the best that more than half a century devoted exclusively to the making of fine automotive finishes can produce.

● Ditzler began by making fine japan colors for carriages. These finishes were used on many of the earliest automobiles. As these vehicles evolved into the modern motorcar, Ditzler contributed to its improvement by developing and perfecting more attractive and longer-lived finishes. These coatings are now used in varying quantities by most of today's manufacturers of motor cars, trucks and buses. This acceptance was earned the hard way—by consistently *dependable performance.*

● Today, Ditzler's complete line includes everything needed to make an automotive vehicle look better longer. That's why so many paint shops use Ditzler Finishes exclusively. They know these superior finishes do the job more efficiently, more economically and with greater satisfaction to the car owner.

Fleet Notes

Continued from Page 278

Closing announcement tells about some phase of the trucking industry's service to the nation.

Ward Trucking Corp., Altoona, Pa., has put into service terminal facilities in Chambersburg, Pa. It will connect several points in Fulton county with the fleet's services.

Riss and Co., Inc., Kansas City, Mo., has announced purchase of 500 diesel-engine tractors from GMC Truck and Coach Division, General Motors Corp. The fleet reports they will be used on more than 40,000 miles of routes from Denver, Col., to Boston, Mass., and from Detroit to Fort Worth, Texas.

Acme Fast Freight, Inc., New York City, has opened its new terminal in Atlanta, Ga. With space for 26 trucks and 22,400 sq ft of floor area, it has been especially designed for handling of ltl freight.

Speedway Carriers, Inc., Selinsgrove, Pa., has moved its home office from Schuylkill Haven, Pa., to its new terminal on route 15 between Sunbury and Selinsgrove.

Kulp and Gordon, Inc., Phoenixville, Pa., has acquired **Cook's Express**, Norristown, Pa.

Pilot Freight Carriers, Inc., Winston-Salem, N. C., has made a $4000 grant to the School of Business Administration, University of North Carolina, Chapel Hill. It will be used for research into the motor freight industry.

Tarbett Trucking, Inc., Muncie, Ind., has announced plans for a new terminal in Buffalo, N. Y. Construction is expected to begin the end of this month.

Atlanta-New Orleans Motor Freight Co., New Orleans, La., expects to finish construction of a new administrative and garage building in that city about the 20th of this month.

Consolidated Copperstate Lines, Los Angeles, Cal., has ICC Division 4 authorization to acquire control of **Valley Motor Lines, Inc., Valley Express Co., United Motor Transport Lines, Inc.**, and **Terminal Warehouse Co.**, all of Fresno, Cal.

West Coast Fast Freight, Los Angeles, Cal., has just finished a training and public relations film on long-haul truck transportation. It will be sold through regular trade channels for classroom instruction, says the announcement.

Johnson Motor Lines, Inc., Charlotte, N. C., has inaugurated a medical care program for its employees to be conducted by the safety and personnel clinic of the company at no expense to the employees.

Spector Motor Service, Chicago, has paid $77,000 in bonus to 700 employees for the year 1953. All employees with one year of service as of December 31, 1953, shared in the "pot."

T.I.M.E., Inc., Montebello, Cal., has installed two-way radios in its pick-up and delivery trucks in the Los Angeles area.

Highway Express Lines, Inc., Philadelphia, has put into service its 100th Reo truck since the end of World War II.

Allied Van Lines, Inc., Broadview, Ill., just completed its annual regional and district sales managers meeting. Plans were announced to spend approximately $3 million a year for the next three years.

M and M Transportation, Somerville, Mass., is sponsoring a traffic safety essay contest for junior and senior high school students in Boston, Mass., schools. Prize is a $500 college scholarship or $500 cash.

Pilot Freight Carriers, Inc., Winston-Salem, N. C., has announced a $4,000 grant to the University of North Carolina's School of Business Administration for research in motor freight transportation. The grant was made by the Pilot Freight Carriers Foundation.

Associated Transport, New York City, has consolidated its two offices at 1740 and 1755 Broadway into one new headquarters at 380 Madison Ave. in that city.

FACTORY FLASHES

White Motor Co., Cleveland, Ohio, held formal opening of its new $600,000 model sales and service headquarters in that city. The shop section of the new building will handle 60 trucks under roof at one time.

Goodyear Tire and Rubber Co., Akron, Ohio, has been presented with American Trucking Assn. special citation for their "leading role in the nation-wide campaign for better roads."

Lee Tire and Rubber Co., Conshohocken, Pa., has moved its Cincinnati, Ohio, branch to 1569 Harrison Ave. in that city.

Eaton Mfg. Co., Cleveland, Ohio, has acquired all the common stock of **Spring Perch Co.**, Lackawanna, N. Y. It will continue operation as a subsidiary of Eaton with F. I. Goodrich as president.

Armstrong Tire and Rubber Co., Natchez, Miss., has been awarded the Reconstruction Finance Corporation's contract for RFC's 1954 tire testing program. Five cars, nine trucks and a staff of 45 will test tires from various tire companies made of experimental compounds for tread wear, body durability, and overall performance.

Reynolds Metals Co., Louisville, Ky., now has its new aluminum reduction plant, located near Arkadelphia, Ark., in operation. Costing an estimated $34 million, it has a rated capacity of 110 million pounds of aluminum a year.

Mack Trucks, Inc., New York City, has announced movement of its Salt Lake City, Utah, sales and service office to 704 South Third West St. in that city.

International Harvester Co., Chicago, opened, March 1, a new motor truck district sales office in Lubbock, Texas. It will be located in the Stanolind Bldg.

Black and Decker Mfg. Corp., Towson, Md., has completed a $2 million addition to its Hampstead, Md., plant, more than doubling the original size. It covers 126,000 sq. ft.

International Harvester Co., Chicago, reports 1953 earnings of $52 million.

Allen B. Du Mont Laboratories, Inc., Clifton, N. J., is presently organizing a national sales operation for its fleet mobile radio equipment.

Gould-National Batteries, Inc., will build a new $1 million battery plant on a

t of payload?

u're in with GMC c.o.e.'s!

LOOK at the conventional tractor. Up to three feet of hood nosing you out of payload! That's a big chunk of *any* legal length limit.

Then look at the new GMC c.o.e. Just 72 inches from bumper to back-of-cab. Think of all the extra payload that lets you carry—on every trip.

Even the 96-inch sleeper model, with its comfortable bunk, handles a 35-foot "square-nose" without stretching the law. And that doesn't cut in on ample clearance for close-quarter maneuvering.

What's more, you can have either *2-cycle* Diesel power with its operating economy – or one of GMC's cost-cutting gasoline engines. There's a choice of ten wheelbases in the 30,000 GVW-65,000 GCW range. And you have either single or tandem axle models.

So see your GMC dealer. Find out all the other features that rate these GMC c.o.e.'s the top trucks in *any* hauling operation.

GMC Truck & Coach Division of General Motors

20-acre site in Antioch, Cal. Production is expected about the middle of the year.

Dodge Division, Chrysler Corp., Detroit, has announced organization of the 23rd and 24th truck regions in Dodge's national truck sales set-up. The new Jacksonville, Fla., region covers that state, southern Georgia and southeastern Alabama. The new Denver, Col., region covers that state, Utah and portions of New Mexico, Wyoming, Montana, Idaho, Nevada and Arizona.

GMC Truck and Coach Division, General Motors Corp., Pontiac, Mich., announces that **Frantz GMC Truck Co.** has purchased all GMC retail facilities in Philadelphia and will handle all GMC sales and service in the area.

Twin Coach Co., Kent, Ohio, President L. J. Fageol has predicted that normal replacements of city type vehicles alone should provide a ready market for approximately 3500 buses in 1954.

Fruehauf Trailer Co., Detroit, sales last year reached a record high of $193,592,531, an 18.9 per cent increase over 1952. Net earnings, after federal income taxes, in 1953 were $6,950,344 as compared ot $5,711,525 in 1952.

Trailmobile, Inc., Cincinnati, Ohio, has announced establishment of a new factory branch in Albany, N. Y.

Mack Trucks, Inc., New York City, and its subsidiary companies, reported net sales of $173,142,849 for 1953 as compared to $170,534,622 in 1952. Net income after taxes in 1953 was $2,553,393 and in 1952 was $1,048,718.

Clark Equipment Co., Buchanan, Mich., has announced plans to erect a new plant on the outskirts of Benton Harbor, Mich. Construction will start at once and it is expected to be in operation before the end of this year.

Hobbs Mfg. Co., Fort Worth, Texas, has set up a second assembly line to double production facilities on aluminum van trailers. The line extends the length of two city blocks.

Coleman Motors Corp. has moved its entire operation to Littleton, Colo., near Denver. The name of the company will be changed to **The American Coleman Co.**

St. Paul Hydraulic Hoist, Mattoon, Ill., has appointed **Timpte Brothers, Inc.,** Denver, Colo., distributor for Colo., most of Wyo. and N.M.

L. A. Young Spring and Wire Corp., Detroit, has announced purchase of **Daybrook Hydraulic Corp.,** Bowling Green and Upper Sandusky, Ohio. Operation will continue as the **Daybrook Hydraulic Division, L. A. Young Spring and Wire Corp.**

White Motor Co., Cleveland, Ohio, sales in 1953 totalled $167,384,914, highest in the company's history and 12.7 greater than 1952. Included in this figure are sales of the company's **Autocar Division.** Net income, after all charges and taxes, reached $5,015,367 in 1953 as compared with $3,447,503 in 1952.

Vapor Heating Corp., and its subsidiary, **Roth Mfg. Co.,** have opened a new plant at 6420 West Howard St., Chicago 31, Ill. Executive and sales offices remain at 80 East Jackson Blvd., Chicago 4, Ill.

Fuller Mfg. Co., Kalamazoo, Mich., has acquired **Shuler Axle Co.,** Louisville, Ky. Shuler continues operation as a wholly owned subsidiary.

General Motors Corp., Detroit, reported 1953 civilian sales of over $8 billion and defense sales of almost $2 billion. Net sales in 1952 totaled $7½ billion. Net income in 1953 was $598 million as compared to 1952 net income of $559 million.

FAMOUS LAST WORDS: YOU DRIVE, YOU'RE TOO DRUNK TO SING.

CEMCO
TRAILER JOCKEYS

Now you can rent them!

Nothing finer for speedy spotting of trailers at terminals!

The nation's leading truckers are using them — and reordering! Cuts trailer spotting time by 80% over the conventional hand-cranking set-up.

A CEMCO gives you 37,500 pounds of hydraulic lifting power at the center line of the fifth wheel. (1) Back under the parked trailer, (2) Apply the power (without even leaving cab), (3) Up goes the trailer, clearing the landing gear, (4) Away to a new location, and (5) let the trailer down gently, then unlock 5th wheel from trailer (driver still stays in cab)—the whole job completed in a matter of minutes.

RENTAL PLAN . . .

A simple, attractive rental plan is available. In most cases the savings alone will pay the rent. Rental payments can apply towards the purchase price if you wish. Write for details — and Trailer Jockey specifications.

FLEETMAN'S LIBRARY

An inert gas-shielded spot welding gun which welds from one side only and without need for back-up plates is described in brochure available from Air Reduction Sales Co., 60 East 42nd St., New York 17, N. Y., describing the company's "Aircospot" process and equipment.

Truck body insulating methods using "Ultralite" as the insulating material are published in a new bulletin you can get by writing Gustin-Bacon Mfg. Co., 210 West 10th St., Kansas City 6, Mo. Included are tips on handling perishable cargo and information on constructing insulated bodies.

Parts' shelves, bins and many other fabricated steel products for use in fleet shops and offices are listed in this catalog, No. 1200-R, available from Red Tiger Products, Inc., 20 North Wacker Drive, Chicago 6, Ill.

A one-piece folding, rear truck body door for closed units and a **split crossbow assembly** for open-top bodies are described in a new folder available from Truk-A-Door Co., 2457 Woodward Ave., Detroit 1, Mich.

Automotive electrical information is covered in a new series of manuals being produced by the Automotive Electric Assn., 16223 Meyers, Detroit 35, Mich. Volume No. 1 is ready at the present time. It covers fundamentals of electricity in automotive use. Subsequent volumes are planned on fuel systems and magneto ignition. Price is $1.00 for each volume.

A series of trailers are described in a group of recently published bulletins. Covered are cargo vans, insulated vans, livestock vans, bulk fruit and grain trailers, furniture vans and flat and rack trailers. For latest details on new developments in these models, write Kingham Trailer Co., Louisville, Ky., for further information on the models you would like to hear more about.

Interstate Commerce Commission reorganization as proposed by the Wolf Management Corp. is described in this booklet that includes the report of the management company, popularly referred to as the "Wolf Report." Copies are available at 75¢ each from Superintendent of Documents, Government Printing Office, Washington 25, D. C. Ask for Catalog No. Y 4.In8/3:In8/29.

Safety showmanship is the purpose of this newly available publication. "Showmanship in Safety" is a complete book on attention-getting stunts and gimmicks for emphasizing safety. It contains over 150 ideas for displays, demonstrations, stunts, awards and other interest-arousing devices all aimed at promoting safety. It is available from the National Safety Council, 425 North Michigan Ave., Chicago 11, Ill. It sells for $2.50 to non-Council members and for $1.25 to members of the Council.

Highway finance developments are reported in the book, "A Dynamic Highway Policy for the Future." It is a 92-page plus 11 pages of statistical material presentation of the proceedings at the recent U. S. Chamber of Commerce National Conference on Highway Financing. Fleet operators should be interested in adding

(TURN TO PAGE 290, PLEASE)

Fleetman's Library

Continued from Page 288

this summary of current thinking on highway finance to their reference library. Copies are $2.00 each from the Chamber of Commerce of the United States, 1615 H Street, N.W., Washington 6, D. C.

"Reciprocity—A Summary of the State Laws" outlines the reciprocity laws, and regulations of each state. It is available from American Trucking Assns., 1426 Sixteenth St., N.W., Washington 6, D. C., at $1.00 per copy.

Safety stickers for dashboards for use as continual reminders have been announced. The 4-color stickers come in sets of 12—one for each month of the year—and include such topics as near misses, day dreaming, turn signals, jumping the yellow and night driving. A free sample and prices for quantities can be obtained from the National Safety Council, 425 North Michigan Ave., Chicago 11, Ill.

Compressed air moisture control and the publisher's method of controlling it are described in a 4-page folder just published by Van Products Co., Erie 2, Pa.

Fire fighting equipment operation and effect are discussed in a series of bulletins just made available. Titles include: (1) Effect of packed dry chemical on operation of Ansul dry chemical fire extinguishers, (2) effect of Ansul dry chemical on electric motors and generators, (3) recommended fire protection of LP gas storage, unloading and handling areas, (4) nitrogen as an expelling agent for dry chemical fire extinguishers and (5) carbon dioxide cartridges. Ask for bulletins by title from Publications Manager, Ansul Chemical Co., Marinette, Wis.

Van trucks made by Fageol in 20 to 35 ft body lengths, 6 to 8 ft heights, and 713 to 1945 cu ft capacity are fully described in a new booklet available from International Harvester dealers or branches or by writing Twin Coach Co., Kent, Ohio.

Loading dock fenders are described in a new 12-page booklet available from The Goodyear Tire and Rubber Co., Inc., Dept. 722, Akron 16, Ohio.

Double disc, self-powered, automotive brakes are described in this pocket-size, booklet. Construction, operation and safety features of this new-type brake are covered. Write Auto Specialties Mfg. Co., St. Joseph, Mich., for a copy.

Traffic safety training film just produced by National Dairy Products is especially designed for both "big rig" and small delivery truck driver training. Information on how to obtain this film for showing can be obtained from National Dairy Products Corp., New York City.

"New Welding Procedures" is the title of a new color film giving a step-by-step description on welding rod and electrode welding techniques. Showings can be arranged by writing Eutectic Welding Alloys Corp., 40-40 172nd St., Flushing 58, N. Y.

Wheel balancing weight chart and weight removing tool for trucks and buses are available without charge from Snugl Wheel Weight Mfg. Co., 824 East Elm St., Kokomo, Ind.

Power tools made by Delta are fully described complete with photographs of the units in this 17 by 22-in. folder you can get by writing Delta Power Tool Division, Rockwell Mfg. Co., 400 North Lexington Ave., Pittsburgh 8, Pa.

Freight damage control equipment including web belt tie-downs, cargo nets, removable second-decks and pallet movers for trailers are described in a 4-page folder you can get by writing Brown-Line Corp., 341 North Foothill Rd., Beverly Hills, Cal.

Diesel specifications on units made by Harnischfeger are described in a new series of folders. Models from 20 to 138 hp and 2, 3, 4 and 6 cyl are included. For a set of these data sheets, write Diesel Division, Harnischfeger Corp., Crystal Lake, Ill.

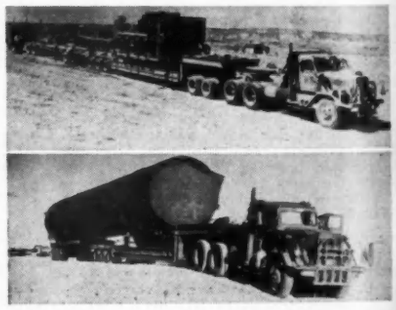
Big Rig for Big Load



The "Big Rig" — unloaded weight 79,000 lb—used by El Paso Natural Gas Co. on recent construction operations in northwestern New Mexico is shown here in its adaptations for hauling two types of giant equipment. Top photo shows tandem jeep dolly under front of triple axle lowboy, so placed to help distribute concentrated weight of compressor engine. They weigh 90,000 to 130,000 lb. Bottom photo shows mammoth treating vessel—length 100 ft, weight 185,000 lb—being moved on the lowboy and a triple axle float trailer boomed to the rear of the vessel. Note that dolly's support is not needed here. All three units were designed and built by Hobbs Mfg. Co., Fort Worth, Texas. The trailer, tandem jeep dolly and triple-axle float trailer were devised to haul both the long, bulky treating vessel and the heavier, more compact compressor engine with a minimum of equipment.

special undercover work

—*protects the performance of your GMC Trucks!*

THAT'S a very special foil being used to cover the bearing in the photo at left. Its metallic surface acts to bar both air and moisture. It protects GMC parts from attack by rust while they're warehoused.

And that's only one example of GMC packaging techniques. Dozens of materials—including the newest plastics—are used in special wrappings and packing for every part that needs special protection.

So you can be sure any GMC replacement you order will be in perfect condition—ready for immediate installation. It's been solidly protected from shipping and handling damage. Corrosion-prevention's built right into its package whenever necessary.

And the quality of the parts, themselves? Remember, they're made in the same factory—on the same machines—to the same high standards—as the original parts in today's great GMC Trucks.

So all the risks of using cut-rate substitutes are avoided when you make a GMC Dealer your exclusive source. And you'll always find the part you need for any GMC model — packaged to protect every GMC's performance!

GMC Truck & Coach Division of General Motors

Fleet Training Courses

FLEET training courses have shown themselves an excellent source of trained personnel and a good way to keep up-to-date on latest techniques in fleet safety, maintenance and operation. For your convenience, here is a calendar of courses scheduled for 1954 together with the address to write to for further information. Unless otherwise noted, courses are full time day courses.

APRIL

5- 9—Fleet Supervisors Training Course—Dept. of Engineering, University of Maryland, College Park, Md.
5- 9—Fleet Supervisors Training Course—Dept. of Civil Engineering, University of Washington, Seattle 5, Wash.
19-23—Fleet Supervisors Training Course—General Extension Division, University of Florida, Gainesville, Fla.
19-23—Vehicle Maintenance Course—Continuing Education Dept., Michigan State College, East Lansing, Mich.
26-30—Course for Trainers of Commercial Drivers—Continuing Education Dept., Michigan State College, East Lansing, Mich.
26-30—Fleet Supervisors Training Course—Transportation and Traffic Management Institute, Northeastern University, Boston 15, Mass.
26-30—Fleet Supervisors Training Course—College of Business Administration, University of Tennessee, Knoxville, Tenn.
26-May 7—Adminsitration and Technique of Accident Investigation—Vocational and Industrial Education Dept., University of Alabama, Tuscaloosa, Ala.
26-May 14—Administration and Technique of Accident Investigation—Traffic Institute, Northwestern University, Evanston, Ill.
26-May 22—Truck Driver Training School, College Extension Division, North Carolina State College, Raleigh, N. C.

MAY

3- 7—Vehicle Maintenance Course—Institute of Public Safety, Pennsylvania State University, State College, Pa.
3- 7—Fleet Driver Supervisors Training Course—Engineering Extension Offices, University of Wisconsin, Madison 6, Wis.
8 —Fleet Supervisor Top Management Conference—Center for Continuation Study, University of Minnesota, Minneapolis 14, Minn.
12-14—Terminal Operation Loss Prevention Course—Dept. of Motor Transportation, University of Georgia, Atlanta, Ga.
18-20—Motor Fleet Management Institute—Industrial Education Dept., Extension Division, University of Texas, Austin 12, Texas.
24-28—Course for Trainers of Commercial Drivers—Institute of Public Safety, Pennsylvania State University, State College, Pa.
24-June 19—Truck Driver Training School, College Extension Division, North Carolina State College, Raleigh, N. C.

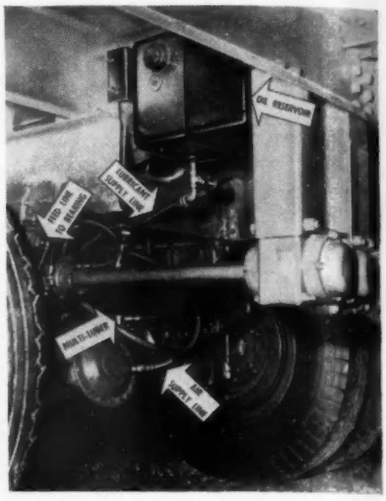
JUNE

7-11—Fleet Supervisor Course—Program Coordinator, University of Denver, Denver, Col.
14-18—Course for Trainers of Commercial Drivers—Engineering Extension Services, Iowa State College, Ames, Iowa.

Lincoln Announces Automatic, Centralized Trailer Lubricator

LINCOLN Engineering Co., St. Louis, Mo., has announced a trailer lubricator designed to provide automatic, centralized and controlled lubrication on air brake-equipped trailers. The system includes all chassis bearings on gravity tandem, spring suspended tandem and most single-axle air-braked units.

The system consists of a lubricant

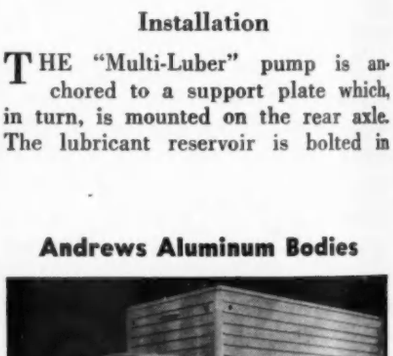


reservoir with a 4-gal capacity and the "Multi-Luber" air operated pumping unit supplying an equal quantity of lubricant simultaneously to each individual bearing. This is done—through rigid or flexible feed lines attached to the "Multi-Luber" pump and to the bearings—each of the trailer air brakes are applied.

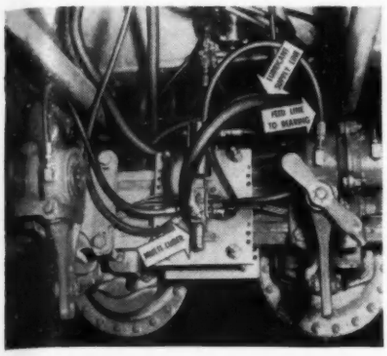
Installation

THE "Multi-Luber" pump is anchored to a support plate which, in turn, is mounted on the rear axle. The lubricant reservoir is bolted in

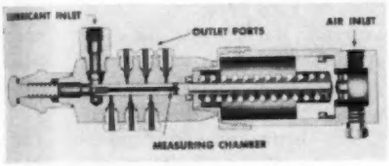
Andrews Aluminum Bodies



New prefabricated truck bodies made of aluminum in eleven standard lengths in three body styles have been announced by Andrews Industries, Inc., St. Louis, Mo. The company states two men can unpack and assemble this body, ready for mounting upon a truck bed, in two hours or less. Design features include interlocking aluminum extrusions at four corner posts and along roof edges. Simple tightening of bolts cause sections to "snap" into locking position in accurate body alignment. All three styles: standard van, van with extended rear platform, and van with side door and wheel housing come in lengths from 12 to 22 ft in one foot increments. Corner posts are made of heavy aluminum extrusions. Sides and roof are .040 corrugated clad aluminum. Three types of rear door closures and three gates are listed as available extras.



position above the pump from which EP lube oil is fed by gravity and atmospheric pressure into the measuring chamber to prime the pump. An air supply line from the brake diaphragm air line to the pumping unit provides the air pressure to operate the pump. Each time the trailer air brakes are applied, air pressure from the brake diaphragm actuates a piston in the pump. This piston forces lubricant



from the measuring chamber, under pressure and in equal volume, to each of the pump outlet ports and thence through the feed lines to each bearing served.

This combination piston plunger and control valve pumps, measures and directs the EP lubricant through each individual feed line progressively from the first to the last bearing served each time the system is cycled. At no time during the stroke is more than one outlet port connected to the pumping chamber so as to insure each bearing its proper amount of lubricant. A disconnected feed line or a bearing with greater clearance than others in the system has no effect on delivery of lubricant to other bearings in the system.

As the spring-loaded plunger returns to normal position, the measuring chamber is automatically refilled with lubricant from the reservoir.

Each "Multi-Luber" pump is designed to serve up to a maximum of 12 bearings. If more than 12 bearings are to be included, two pumping units may be employed. One or more outlet ports can be plugged where fewer than 12 bearings are to be served by a single pump.

Each open outlet port discharges .002 oz of EP lube in each cycle regardless of how many ports are plugged. Thus, if any one feed line be damaged, only .002 oz of lube would be lost each time the system was cycled.

Chevrolet 4-Wheel Drive

"The Napco Powr-Pak" 4-wheel drive for Chevrolet trucks features a 2-speed range, with fingertip control. It is an improved model of the same military-type 4-wheel drive chosen by the U. S. Armed Forces for the Chevrolet trucks used during World War II. Made by Napco Products Division, Northwestern Auto Parts Co., Minneapolis, Minn. Any Chevrolet dealer can provide new Chevrolet trucks factory equipped with the new unit, or it is possible to convert trucks presently in use. The truck remains unchanged except for the addition of the "Powr-Pak" itself. It uses standard Chevrolet truck parts.

Studebaker Offers V-8 in '54 Truck Line

STUDEBAKER'S announcement of its 1954 truck line includes offering a V-8 engine in its 1½ and 2-ton trucks. The new truck series, ranging from a half-ton pick-up to a heavy-duty 2-ton unit, includes five basic models. Gross vehicle ratings range from 4600 to 16,000 lb. The 1954 trucks are designated as the 3R series.

Studebaker's 1½ and 2-ton trucks are now available with either the high-performing V-8 or the sturdy 6-cyl 'Power Plus' engine. Along with increased horsepower is a four-speed synchromesh transmission as standard on all 2-ton models and optional at extra cost on all the others.

The heavy-duty transmission which was formerly available at extra cost on the 1½-ton models is now standard on those models.

A new wheelbase has been added to the 1-ton series. The 3R14 one-ton truck will have a 131-in. wheelbase, 9-ft body, and gross vehicle rating of 9500 lb.

Power Plants

THREE different power plants are available for Studebaker's 1954 trucks: the 6-cyl "Econ-O-Miser" and "Power Plus" engines for the lighter models, and either the new V-8 power plant or the 6-cyl "Power Plus" engine for the 1½ and 2-ton models. A compression ratio of 7.5 to 1 is standard for the "Econ-O-Miser" and V-8 engines, and 7:00 to 1 cr is standard for the "Power Plus" engine.

Half-ton and ¾-ton models are available with wheelbases of 112 and 122 in.

respectively. One-ton models are offered with wheelbases of either 121 or 131 in. The 1½ and 2-ton models have wheelbases of 131, 155, 171, or 195 in.

Cab interiors are color-matched to harmonize with exterior hues. There are nine different body color options. Exterior changes include a smart new grille, headlamp, and bumper assembly. New one-piece windshields coupled with the sloping hoods enable drivers to see the road to a point within a few feet of the front bumpers.

Instruments are larger and centrally grouped for quick identification.

Three-speed synchromesh transmission is standard, with overdrive transmission optional at extra cost on the ½ and ¾-ton models. Four-speed transmission is standard on the 1-ton Heavy-duty four-speed transmission is standard on the 1½-ton models. Four-speed synchromesh transmission is standard on all 2-ton models and available at extra cost on any of the others.

An exclusive feature on Studebaker's ¾-ton truck lies in the underslung rear spring leaves which contribute to low loading height. An option—2-stage rear springs—is also offered for the ¾-ton truck.

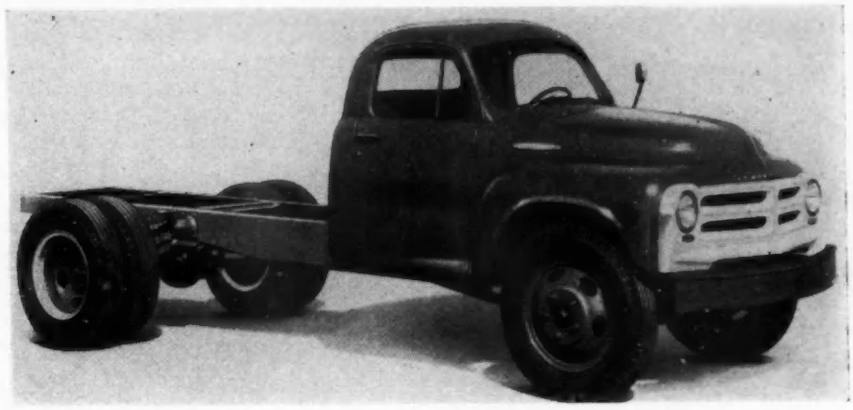
Axles

ALL 1-ton models are equipped with new self-energizing brakes and new hypoid rear axles with ratios of 5.14 or 5.83. These same capacity vehicles with 131-in wheelbase may be obtained with either 17-in. single rear wheels or 16-in. dual rear wheels. A new, lower 9-ft stake body makes loading and handling much easier.

Trucks from the 1-ton model up are equipped with easy-riding springs featuring four distinct advantages; (1) double-wrapped spring eyes on the front of each rear spring so that if breakage of the main leaf should occur, the second leaf takes over, (2) use of slide mounts whereby the rear spring glides under the spring hanger as the truck is loaded with the result that as the springs become shorter their strength increases, (3) replaceable wear plate to prevent spring hanger failure by protecting it from frictional wear, and (4) rubber-bushed spring eyes which eliminate the metal-to-metal contact between spring eyes and pins and thus eliminate the need for lubrication at these points.

Direct bumper-to-frame mountings with new "wing" braces provide added protection for the front ends of the heavier models.

A wide range of rear axle ratios makes possible the selection of the proper gear combination. A two-speed axle is available at extra cost on the 1½ and 2-ton models.

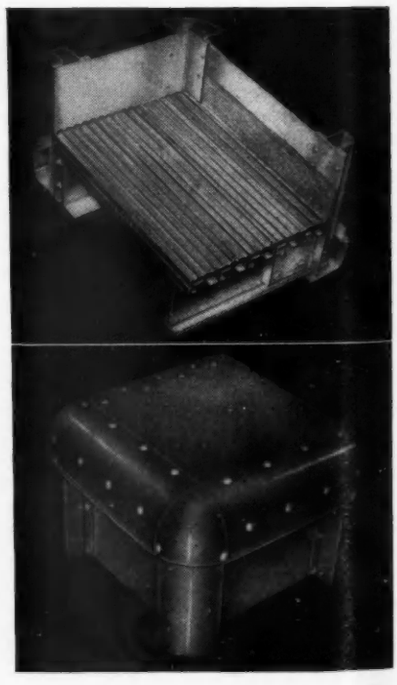


Magnesium Body Is 35% Lighter Than Aluminum

NEW truck bodies, utilizing body panels made from magnesium alloy sheet, are reported to be 35 per cent lighter than comparable aluminum bodies.

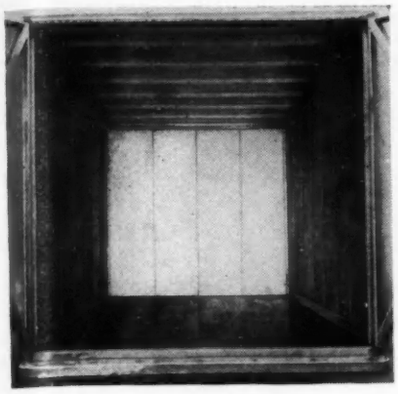
In a standard model, a 12 ft van-type body complete with roof and doors, there is a cubic capacity of 621 cu ft and a weight of only 850 lbs. For the same cubic capacity in the 12 ft body, a steel model would weigh about 2200 lbs and an aluminum body of comparable strength and construction would weigh almost 1300 lbs.

The entire body is assembled with 56-S alloy aluminum rivets because of their excellent strength characteristics



and because they create no electrolytic corrosion hazard. Similar precautions are taken at the points of contact between the magnesium longitudinal stringers and the steel chassis rails.

Aluminum strips and tie down brackets are used to prevent any direct contact between the magnesium and the steel. In addition, a special insulating plastic compound is employed at all joints to insure against water leakage and corrosion.



Two Basic Types

MADE by White Metal Rolling and and Stamping Corp., Brooklyn, N. Y., they are available in two basic types: the completely enclosed van type and the open type. Either of these types is available in body lengths from eight to 24 ft in 2 ft increments. Either of these types is available as a straight frame or wheelhousing model.

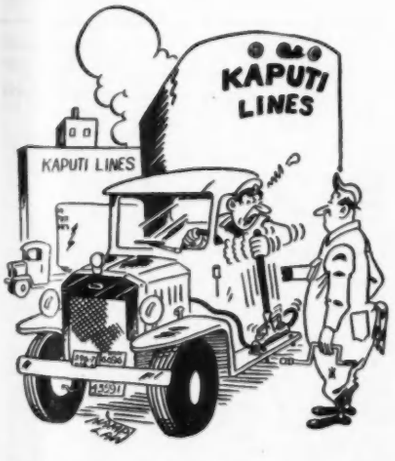
The open type of body can be had with sides of any desired height up to 7½ ft. Supports for a tarpaulin covering for this type of body can be provided. The van type body can be furnished with or without rear and/or side doors. Scissors or chain type express gate with or without curtain, is available, if desired, in place of doors. Double paneling, and insulation may be supplied at a proportionate additional charge.

They are available in "knocked-down" condition. That is, assembled floors, sides, front sections, roofs and back doors will be furnished for subsequent final assembly by the customer at destination. Component parts for making "Whitelight," magnesium truck bodies also can be obtained. This consists of a package kit containing the various extruded shapes, panel sheets, hardware, etc., all cut to required length or mitered to correct dimensions, and holes drilled for rivets and bolts, etc., but not assembled.

Van body weights for the various available lengths are as follows:

Interior Length in feet	Weight in pounds Standard	Heavy Duty
8	663	850
10	724	950
12	832	1100
14	90	1225
16	1055	1400
18	1188	1575
20	1300	1725
22	1432	1900
24	1518	2025

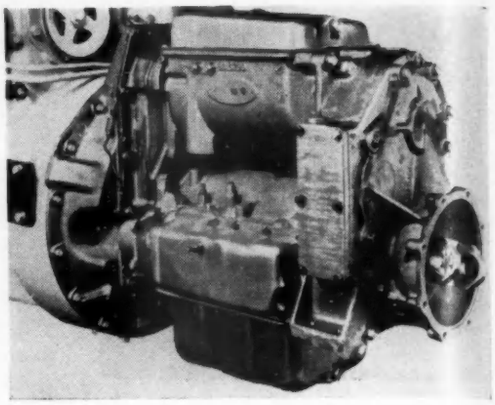
The bodies are built to mount on regular 34 or 36-in. chassis frame. They are constructed to fit trucks having SAE standard cab-to-axle dimensions as follows: 39, 48, 60, 72, 84, 96, 108, 132, 144, 156 in. Exterior width of the van body is 7 ft, 8 in., with a 7 ft, 8 in. maximum height. Interior width of the van body is 7 ft, 2½ in., with maximum interior height of 7 ft, 2 in.



"That was my last trip until you get me a new fuel pump!"

GMC Twin Hydra-Matic for Heavy-Duty Hauling

Three driving ranges plus seven forward and one reverse gears give 16 changes



ANNOUNCEMENT of an automatic drive for heavy duty trucks, combining automatic shifting with sufficient multiplicity of gear ratios to meet heavy duty hauling requirements has been made by GMC Truck and Coach Div., General Motors Corp.

First application of "Twin Hydra-Matic" drive is on the GMC diesel model DFM-660-47. a C-O-E highway tractor rated at 60,000 lb GCW. It will be made available later in other 150-hp models, eventually will be adapted for GMC gasoline and diesel models in the 175-225-hp range.

As illustrated, the Twin Hydra-Matic transmission consists of two Hydra-Matic units, mounted in a case of hour-glass form, one above the other. This combination provides seven closely spaced forward gear ratios and one

reverse, shifting automatically in a manner somewhat similar to the usual operation of the Hydra-Matic drive.

A three-speed reduction gear box is mounted behind the automatic drive, connected by a short propeller shaft, providing three driving ranges at the option of the driver. Although theoretically this combination is capable of 21 different gear ratios, in actual operation there are certain overlapping gear ratios in each range with the result that usually the combination will provide a maximum of some 13 distinct gear changes and three reverse.

The driven member of the fluid coupling is bolted to a planetary gear set which acts as a differential and operates both upper and lower halves of the twin Hydra-Matic. Both upper and lower units are governed to shift independently and alternatively with each other. Both units are geared together at the rear, driving a single output shaft.

In addition, the fluid coupling incorporates a special centrifugal valve arrangement to decrease efficiency of fluid coupling to prevent drive with an idling engine.

From the standpoint of the driver, the main control is achieved through four positions to cover the gamut of maneuvers. These include: neutral, drive, hold, and reverse. Since the transmission shifts automatically through the 7-speed range, these positions are the basic control of the Twin Hydra-Matic.

Supplementing the Twin Hydra-Matic is the 3-speed reduction unit which has a direct ratio of one-to-one; low position of 2 to 1; and a Creeper or low-low position of 3.87 to 1. These ratios provide the driving ranges to be selected by the operator through manual shift much the same as in the case of the current GMC 8-speed Hydra-Matic drive for lighter vehicles.

Shifting Conditions, Speed

IT MAY be noted at this point that the selection of the range—through the auxiliary gear box—depends entirely upon the terrain and load conditions. For example, under extreme conditions of maximum load and grade, the driver may elect to move progressively from creeper to direct. Under

(TURN TO PAGE 312 PLEASE)

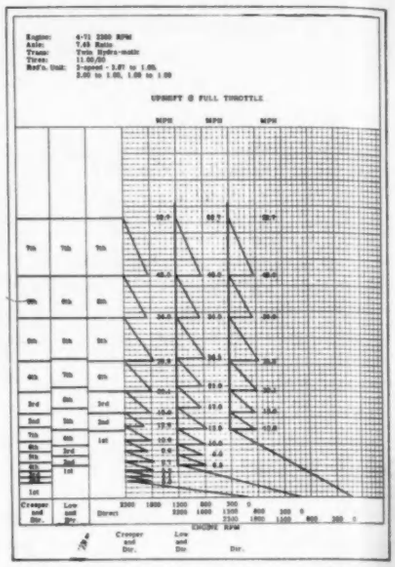
GMC Hydra-Matic

Continued from Page 311

normal conditions such as maximum load and on level terrain, a start may be made in low—or middle range—then a shift to high. Under more favorable conditions the vehicle may be started in direct range. With training and some road experience the driver will find it possible to manipulate the drive with great facility and maximum economy.

As in the case of most automatic drives the road speed at which the various shifts occur depends upon throttle position. The term "minimum throttle" is the minimum amount of throttle required to upshift or downshift the transmission. "Full throttle" is depressing the accelerator to the floor board. The Upshift chart on page 311 shows the *average road speeds* at which shifts will occur. This is based on 11.00/20 tires, rear axle ratio of 7.45 to 1, and governed engine speed of 2300 rpm.

These maneuvers can best be appreciated by studying the stepped chart reproduced here. The three columns to the left show the progression of gear ratio combinations for each of the



maneuvers mentioned above; while the three stepped diagrams to the right indicate the road speeds at which the maneuvers will take place under conditions of maximum throttle.

Directly under the stepped diagrams on the right hand side of the chart are three lines showing the engine rpm at which the shifts take place. The top line refers to creeper and direct, the second line to low and direct, and the bottom line to direct.
